Dr. Smita has been a visiting faculty to Norwegian University of Science and Technology, Norway, The Monash Asia Institute of Monash University, Melbourne (Australia) and The School of Built Environment and Planning, Curtin University, Perth (Australia).

About the Session

The session started with an introduction to the tools and techniques in research that are the statistical methods of collection, analysis, interpretation, presentation, and organization of data. Statistics provides numerous tools and techniques to analyze the data and interpret the results of the analysis. These days' individuals talk of research, both in academic institutions, research organizations and industries. There are several research studies undertaken and accomplished year-after-year. But in most cases very little attention is paid to an important dimension related to research, namely, that of research methodology. Research Methodology is a way to find out the result of a given problem on a specific matter or problem that is also referred as research problem. The researcher uses different criteria for solving/searching the given research problem. The different sources use different types of methods for solving the problem.

The need, therefore, is for those concerned with research to pay due attention to designing and adhering to the appropriate methodology throughout for improving the quality of research.

Objective

This programme is essential for enhancing the vision of faculty members by exposing them to contemporary research methodology and an opportunity for researchers to present the problems related to the methodology faced by them in their current work. It is essential for the research scholar/faculty members to know about the methodological requirements of research before selection of the research problem.
