Farmers Lifestyle and Health Survey

Resource person: Dr. C.D. Mayee

Designation: Chairman, Agrovision - Advisory Council

Date: 9-06-2018 to 11-06-2018

Number of Participants: 15

About the resource person: Dr. C.D. Mayee has worked as a Chairman, Agrovision - Advisory Council and Former Chairman of Agriculture Scientists Recruitment Board (ICAR) and other Advisory Council Members.

About: An Indian Farmer is very hard working. He gets up early in the morning, takes his plough, and with his cattle goes to his field even before it is full daylight. He works there all day without caring for the hardships of the weather. Winter, summer or rain, it is all the same for him. They must check that their tools and materials are clean and ready to work. For the rest of the day, activities include checking on crops, plowing or bailing up grass for cows to eat in the winter, and general farm maintenance. Their day ends around 7.30-8pm.

The agricultural sector has undergone immense change since the publication of Agriculture at Risk in 1988. In some respects there has been improvement in the health and safety of those working in agriculture due to improved technology, personal protection, and awareness of hazards. The establishment of the NIOSH Agricultural Health and Safety Centers as a result of that effort has provided a network for the collaboration of academic health center researchers, agricultural safety educators, and agricultural engineers to institute a multi-disciplinary approach to research, outreach, and education in agricultural health and safety. The regional centers appropriately reflect the geographic variation in farming conditions and practices. Regulatory approaches to improving occupational and environmental health in agricultural practices have included the passage of the Worker Protection Standard in 1992 and the Food Quality Protection Act in 1996, both dealing exclusively with pesticides. Even with the consolidation of agricultural operations and the increased complexity and size of farms and other agricultural operations, there is a lack of knowledge of how many people are adversely affected by their exposures, particularly long-term, low level exposures.

The Research Person was invited on to the stage by Dr. Anita Patra, Registrar, Centurion University of Technology. Dr. C.D. Mayee has given a great series of lectures from 09-06-2018 to 11-06-2018.

Objective: The main intention of this workshop is to give awareness to faculty regarding how to Educate, Encourage and Empower the Farmers. The another objective is to link farmers life style to their health status

Outcome: By the end of the workshop the resource person was facilitated by Dr. Anita Patra, Registrar, Centurion University of Technology and Management, Paralakhemidi, Odisha. Certificate of Participation was provided to all the participants
