| 731 | <p>Today, agriculture sector is facing various hurdles because of change in climate, urbanization, diminishing arable land, death of natural resources, etc. Hence, it has become important to increase crop production to feed the ever-growing world population. Despite the significant annual increase in input yield has stagnated and even declined in some cases. So, different approaches have been exploited to improve the yields of various crops. The conventional approaches are inefficient, in many cases, in narrowing down the gap between potential and average yield (Mondal et al. 2013). There is enormous scope for researchers to develop an efficient and eco-friendly production technology based</p> | Bsc agriculture ,3rd yr student | Siksha 'O' Anusandhan (Deemed to be University) Private university in Bhubaneswar |
