

Centurion University of Technology and Management, Odisha

B. Tech in Civil Engineering(CE)

CHOICE BASED CREDIT SYSTEM

COURSE STRUCTURE & SYLLABUS

BASKET – I, II, III, IV & V

Centurion
UNIVERSITY

Shaping Lives...
Empowering Communities...

School of Engineering & Technology

2023-24

Programme Objectives; Job/Higher studies/Entrepreneurship

POs: Engineering Graduates will be able to;

PO	Outcomes
PO1	Engineering knowledge: Apply knowledge of mathematics, science, Engineering fundamentals, and civil engineering to the solution of engineering problems
PO2	Problem analysis: Identify, formulate, review literature and analyze civil engineering problems to design, conduct experiments, analyze data and interpret data
PO3	Design /development of solutions: Design solution for civil engineering problems and design system component of processes that meet the desired needs with appropriate consideration for the public health and safety, and the cultural, societal and the environmental considerations
PO4	Conduct investigations of complex problems: Use research based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions in civil engineering
PO5	Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and tools including prediction and modelling to civil engineering activities with an understanding of the limitations
PO6	The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to civil engineering practice
PO7	Environment and sustainability: Understand the impact of the civil engineering solutions in societal and environmental contexts, and demonstrate the knowledge and need for sustainable development
PO8	Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the civil engineering practice
PO9	Individual and team work: Function affectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings in civil

	engineering
PO10	Communication: Communicate effectively on complex engineering activities with the engineering committee and with society at large, such as, being able to comprehend and write affective reports and design documentation, make effective presentations in civil engineering
PO11	Project Management and finance: Demonstrate knowledge & understanding of the civil engineering principles and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments in civil engineering
PO12	Life- long learning: Recognize the need for, and the preparation and ability to engage in independent research and lifelong learning in the broadest contest of technological changes in civil engineering

PEOs/PSOs

Department of Civil Engineering

PSO1. Graduates will have the ability to plan, design and analyze building structural system and smart city planning.

PSO2. Graduates will have the ability to provide design solution to water supply, sewage system and land management.

PSO3. Graduates will have professional ethics and morals to formulate and solve civil engineering problems that serve the society.

Course Outcomes Attributes

Course Outcomes	Attributes
CO1	Knowledge
CO2	Analytical skill and Critical Thinking
CO3	Problem Solving and Decision taking ability
CO4	Use of Tool, Design and Development (Hands-on/Technical skill)
CO5	Research
CO6	Environment and Sustainability
CO7	Ethics & Team work
CO8	Soft skill

**Course Structure
Basket - I**

Course Code	Course Title	Credits	Course Type T+P+PJ
CUTM1001	Differential Equations and Linear Algebra	3	2+0+1
CUTM1002	Laplace & Fourier Transforms	3	2+0+1
CUTM1003	Complex Analysis & Numerical Methods	3	2+0+1
CUTM1004	Discrete Mathematics	3	2+0+1
CUTM1005	Probability & Statistics	3	2+0+1
CUTM1925	Calculus	3	2+0+1
CUTM1006	Mechanics for Engineers	3	2+1+0
CUTM1007	Optics and Optical Fibres	3	2+1+0
CUTM1008	Applied Analytical Chemistry	3	2+1+0
CUTM1009	Applied Engineering Materials	3	2+0+1
CUTM1010	Environmental Studies	2	0+0+2

Syllabus

Differential Equations and Linear Algebra

Code	Course Title	Credit	T+P+PJ
CUTM1001	Differential Equations and Linear Algebra	3	2+0+1

Course Objective

- Introduce students to how to solve linear Differential Equations with different methods.
- To solve the system of linear equations appearing in the problems of electrical engineering, mechanical engineering etc.
- To use Eigen values and Eigen vectors in Control theory, vibration analysis, electric circuits, advanced dynamics problems.
- Introduce students how to solve first order and second order differential equations

Course Outcomes

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Understanding and knowledge is the importance of linear functions in mathematics.	PO1 (3)
CO2	Learn fundamental and analytical concepts of ODE theories where and how such equations arise in applications to scientific and engineering problems.	PO1(3)
CO3	Solving systems of linear equations using Gauss-elimination to reduce to echelon form.	PO1(2), PO2(3)

Course contents

Module-I

First order linear differential equations and its applications (Kirchhoff's law)

Project-1: Some applications of differential equations in RL electrical circuit problems

Module-II:

Second order linear homogeneous differential equations (Real roots, Real equal roots, Complex conjugate roots) and its applications.

Project-2: RLC Circuit, Pendulum

Module-III:

Second order linear non-homogeneous differential equations, finding particular integral consisting of exponential, trigonometric functions (Sine, cosine) using inverse operator method

Project-3: Simple mass-spring system, Damped vibration system

ModuleIV:

Basic concepts of a matrices, solution of linear system of equations by Gauss elimination method, linearly independent and dependent of a vectors, rank of a matrix.

Project-4

Report on finding the traffic flow in the net of one-way streets

Module V:

Determinants and Cramer's Rule, Fundamental theorem of linear system of equations.

Module VI:

Eigenvalues and Eigen vectors of a matrix

Project-5

(i) Find the limit states of the Markov process model.

(ii) Find the growth rate in the Leslie model

Module VII:

Symmetric, Skew-Symmetric, Orthogonal Matrices and Properties

Project-6

To make a report to show that the product of two orthogonal matrices is orthogonal, and so is the inverse of an orthogonal matrix. What does this mean in terms of rotations?

Text Books:

1. Advanced engineering mathematics by Erwin Kreyszig, 8th edition, Chapter-6 (6.1-6.6), Chapter-7 (7.1,7.2)
2. Higher Engineering by B.V. Ramana, Chapter-8(8.1,8.2,8.21), Chapter-9 (9.2,9.3,9.5)

Reference Books:

1. J. Sinha Roy and S. Padhy, A Course of Ordinary and Partial Differential Equations, Kalyani Publishers, New Delhi.
2. G.B. Thomas, M.D. Weir, J.R. Hass, Thomas' Calculus, Pearson Publication.
3. R.G. Bartle, D.R. Sherbert, Introduction to Real Analysis, Wiley Publication

Laplace and Fourier Transform

Code	Course Title	Credit	T+P+PJ
CUTM1002	Laplace and Fourier Transform	3	2+0+1

Course Objective

- To describe the ideas of Fourier and Laplace Transforms and indicate their applications in the fields such as application of PDE, Digital Signal Processing, Image Processing, Theory of wave equations, Differential Equations and many others.
- To use Fourier series for solving boundary value problems appearing in scientific & engineering problems.

Course outcomes

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Solve differential equations with initial conditions or knowledge using Laplace transform.	PO1 (3)
CO3	Solving the Fourier transform of a continuous function and being familiar with its basic properties.	PO2(3)

Course content

Module-I

(T-3-Pj-2)

Laplace Transforms, Properties of Laplace transforms, Unit step function.

Project-1

Make a short draft of properties of Laplace transform from memory. Then compare your notes with the text and write a report of 2-3 pages on these operations and their significance in applications.

Module-II**(T-2-Pj-2)**

Second shifting theorem, Laplace transforms of Derivatives and Integrals

Project-2

Find the Laplace transform of the following functions

Module-III**(T-3-Pj-2)**

Derivatives and Integrals of Transforms, Inverse Laplace transform.

Project 3:

Application of Unit step function (RC- Circuit to a single square wave).

Module- IV**(T-2-Pj-2)**

Solution of Differential Equation by using Laplace Transform.

Project 4: Find the solution of differential equation by using Laplace Transform.

Module-V**(T-4-Pj-2)**

Periodic function, Fourier series, Fourier series expansion of an arbitrary period, Half range expansions.

Project-5

Find the Fourier series expansion of a 2π periodic function.

Module-VI**(T-3-Pj-2)**

Complex form of Fourier series, Fourier Integrals, Different forms of Fourier Integral.

Project-6

Find the Fourier sine and cosine integral of the following functions.

Module-VII**(T-3)**

Fourier Transforms, Fourier sine and cosine Transforms.

Text Books:

1. E. Kreyszig , Advanced Engineering Mathematics, Johnwilley& Sons Inc-8th Edition.Chapters:5(5.1 to 5.4(without Dirac's delta function)),10(10.1,10.4 and 10.7-10.9(definitions only , no proofs))
2. Higher Engineering Mathematics by B.V.Ramana, Tata McGraw-Hill Education India, Inc-8th Edition.

Reference Books:

1. Advanced Engineering Mathematics by P.V.O' Neil Publisher: Thomson
2. Mathematical Methods by Potter & Goldberg ; Publisher : PHI

Complex Analysis and Numerical Methods

Code	Course Title	Credit	T-P-PJ
CUTM1003	Complex Analysis and Numerical Methods	3	2+0+1

Course Objective

- To understand about Complex variables and complex functions.
- To acquire the skill of evaluating contour integrals using Cauchy's integral formula and Cauchy's integral theorem.
- To understand the limitations of analytical methods and the need for numerical methods and the ability to apply these numerical methods to obtain the approximate solutions to engineering and mathematical problems.

Course Outcomes

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Derive a variety of numerical methods for finding out solutions of various mathematical problems arising in roots of linear and non-linear equations, Solving differential equations with initial conditions and Evaluating real definite integrals.	PO2(3)
CO2	To get equipped with the understanding of the analytical and fundamental concepts of functions of a complex variable along with the concepts of analyticity, Cauchy-Riemann relations and harmonic functions.	PO1 (3)
CO3	Solving complex contour integrals applying the Cauchy integral theorem, Cauchy integral formula.	PO2(3), PO1(2)

Course Outline

Module I (T-3 hrs-P-0 hrs-P-0 hrs)

Functions of a complex variable, Analytic functions, Cauchy-Riemann equations (Without Proof), Harmonic and Conjugate harmonic functions, Cauchy's Integral Theorem (Without Proof).

Project-1 : Verification of Cauchy-Riemann equations for complex functions in Cartesian form and Polar form

Module II (T-3 hrs-P-0 hrs-P-2 hrs)

Cauchy's Integral Formula (Without Proof), Cauchy's Integral Formula for higher order derivatives (Without Proof), Taylor series.

Project-2 : Evaluation of contour integrals using Cauchy's Integral Formula

Module III (T-4 hrs-P-0 hrs-P-2 hrs)

Laurent series (Without Proof), Pole, Residue, Residue Theorem (Without Proof), Evaluation of Real integral Type-I.

Module – IV (T-2 hrs-P-0 hrs-P-2 hrs)

Interpolation, Lagrange interpolation polynomial.

Project-3 : Finding out the value of a given function at an interior point on an unequal interval using Lagrange interpolation polynomial

Module – V (T-3 hrs-P-0 hrs-P-2 hrs)

Forward and backward difference operators, Newton's forward and backward difference Interpolation formulae.

Project-4 : Finding out the value of a given function at an interior point on an equal interval using Newton's forward and backward difference interpolation formulae

Module – VI (T-2 hrs-P-0 hrs-P 2 hrs)

Numerical Integration, Trapezoidal rule, Simpson's one third rule.

Project-5 : Evaluation of real definite integrals using Trapezoidal rule and Simpson's one third rule.

Module – VII

(T-3 hrs-P-0 hrs-P-2 hrs)

Runge-Kutta 2nd & 4th order methods.

Project-6 : Finding out Numerical solutions of differential equations using Runge-Kutta 2nd& 4th order methods

Text Book:

1) Advanced Engineering Mathematics by E. Kreyszig Publisher: Johnwiley& Sons Inc-8th Edition Chapters : 12 (12.3, 12.4), 13 (13.2 to 13.4), 14.4, 15 (15.1 to 15.4 Only Type-I integral), 17 (17.3, 17.5), 19 (19.1).

Reference Books:

1. Advanced Engineering Mathematics by P.V. O'Neil Publisher: Thomson.
2. Fundamentals of Complex Analysis (with Applications to Engineering and Science) by E.B. Saff& A.D. Snider Publisher: Pearson.
3. Numerical Methods for Scientific and Engineering Computation by M. K. Jain, S. R. K. Iyengar& R.K. Jain; New Age International Publishers.
4. Introductory Methods of Numerical Analysis by S.S. Sastry; Third Edition, Prentice Hall India.

Discrete Mathematics

Code	Course Title	Credit	T-P-PJ
CUTM1004	Discrete Mathematics	3	2+0+1

Course Objective

- To understand mathematical reasoning in order to read, comprehend and construct Mathematical arguments as well as to solve problems, occurred in the development of programming languages.
- To work with discrete structures such as graphs to study the structure of the world wide web, to model a computer network and to find the shortest path between two places in a transportation network.

Course Outcomes

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Apply Knowledge of mathematics in truth tables and the rules of propositional and predicate calculus	PO1(2)
CO2	Apply the logical and analytical structure of proofs and work symbolically with connectives and quantifiers to produce logically valid, correct and clear arguments.	PO1 (3)
CO3	Solving elementary mathematical arguments and identify fallacious reasoning	PO1(3) , PO2(3)

Course Outline

Module -I

(4Hours)

Propositional Logic, Connectives, Truth tables of compound propositions, Propositional Equivalence.

Project 1: Given the truth values of the propositions p and q , find the truth values of the conjunction, disjunction, implication, bi-implication, converse, contrapositive and inverse.

Module -II

(3Hours)

Theory of inference, Predicates and Quantifiers, Rules of Inference.

Project 2: Build valid arguments of a given set of propositional logics and quantified statements using rules of inferences.

Module -III

(3 Hours)

Relations and its properties, Partial Ordering, POSET, Totally Ordered Set.

Project 3: Define the properties of a relation on a set using the matrix representation of that relation with examples.

Module -IV

(3Hours)

Hasse Diagram, Maximal & Minimal Elements of a Poset, Greatest & Least Elements of a Poset, Supremum & Infimum of a Poset, Lattice.

Project 4: Find a Topological Sort of a Poset.

Module -V

(3 Hours)

Introduction to Graph Theory, Graph Terminology and Special types of Graphs, Representation of Graphs.

Project 5: Describe how some special types of graphs such as bipartite, complete bipartite graphs are used in Job Assignment, Model, Local Area Networks and Parallel Processing.

Module -VI

(3 Hours)

Graph Isomorphism, Connectivity, Euler and Hamiltonian Graphs, Planar Graphs, Graph Coloring.

Project 6(i): Describe the scheduling of semester examination at a University and Frequency Assignments using Graph Colouring with examples. Find also their Chromatic numbers.

Project 6(ii): List out 10 pairs of Non-isomorphic graphs and explain the reason behind it.

Project 6(iii): List out all features of Euler and Hamiltonian Graphs. Justify whether the given set of graphs are Euler and Hamiltonian. Construct a Gray Code where the code words are bit strings of length three.

Module -VII

(4 Hours)

Trees and their Properties, Spanning Trees, Minimum Spanning Trees, Kruskal's Algorithm.

Project 7: Find a minimum spanning tree in a given weighted graph using Kruskal's Algorithm.

Text Books:

1. Discrete Mathematics and its Applications by K.H.Rosen, Publisher: TMH, Sixth Edition, 2009. Chapters: 1(1.1, 1.2, 1.3, 1.5); 7(7.1, 7.6); 8(8.1 to 8.5, 8.7, 8.8); 9(9.1, 9.4, 9.5).

Reference Books:

1. Discrete Mathematical Structures with Applications to Computer Science, J. P. Trembka, R. Manohar, Tata MC Graw – Hill Edition 38th reprint, 2010.
2. Discrete and Combinatorial Mathematics by R.P.Grimaldi Publisher: Pearson, 5th Edition, 2003.

3. Discrete Mathematics and Applications by Thomas Koshy Publisher: Elsevier, 2004.
4. Discrete Mathematical Structures by B. Kolman, R.C. Busby & S. Ross Publisher: PHI, 5th Edition, 2003

Probability and Statistics

Code	Course Title	Credit	T-P-PJ
CUTM1005	Probability and Statistics	3	2+0+1

Course Objective

- To translate real-world problems into probability models.
- To motivate students in an intrinsic interest in statistical thinking.
- To recognize the role and application of probability theory, descriptive and inferential statistics in many different fields of science and engineering.
- To apply probability and statistics in engineering and science like disease modelling, climate prediction and computer networks etc.

Course Outcomes

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Define and illustrate the concepts of sample space, events and compute the probability and conditional probability of events with knowledge.	PO1 (3)
CO2	Define, illustrate and apply the concept of the expectation to the mean, variance and covariance of random analytical and critical variables.	PO1(3)
CO3	Solving probabilities based on practical situations using the Binomial, Poisson and taking normal distributions.	PO2(3)

Course content

Module I : (3 hrs+2 hrs)

Sample spaces and events; axiomatic definition of probability; Axioms of Probabilities

Project-1

A Report on Application of probability to control the flow of traffic through a highway system, a telephone interchange, or a computer processor

Module II : (3 hrs +2 hrs)

Mutually Exclusive Events, Dependent and Independent Events. Conditional Probability

Project-2

A Report on Dependent and Independent Events with Examples

Module III: (3 hrs +2 hrs)

Discrete random variables and probability distributions, Continuous random variables and probability

distributions , Mean ,Variance and Moment Generating Function of Distributions

Project-3

Application of random variables in Engineering Field

Module IV: (3 hrs +2 hrs)

Uniform Distribution, Binomial Distribution, Poisson Distribution

Project-4

Applications of Poisson distribution

Module V: (3 hrs +2 hrs)

Normal Distribution, Working with Normal Tables, Normal Approximation to the Binomial Distributions

Project-5

Normal Distribution utilized in statistics, business settings, and government entities.

Module VI: (3 hrs)

Statistics: Random Sampling, Population and Sample, Sample Mean and Variances, Point and Interval Estimations, Confidence Intervals

Module VII: (3 hrs +2 hrs)

Regression and Correlation Analysis: Correlation Coefficient, Co-variance independent random

variables, linear regression of two variables

Project-6

Uses of Regression and Correlation Analysis in Business

Text Books:

1. Name of Author, Title, Publication, Edition, Advanced Engineering Mathematics by E. Kreyszig Publisher: John Willey & Sons Inc-8th Edition

Reference Books:

1. Statistical Methods by S.P. Gupta (31st Edition); Publisher: Sultan Chand & Sons.
2. Mathematical Statistics by S.C. Gupta & V.K. Kapur (10th Edition); Publisher: Sultan Chand & Sons.

Calculus

Code	Course Title	T-P-PJ	Prerequisite
CUTM1925	Calculus	2-0-1	

Course Objective

- To apply the concepts of derivative to find curvature and radius of curvature of a curve.
- To apply concepts of Vector Calculus to the problems related to models in work, circulation and flux Problems, hydrodynamics and fluid dynamics etc.

Course Outcomes

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Knowledge in transforming double integral to line integrals, triple integrals to surface integrals, surface integrals to line integrals and vice versa.	PO2(3)
CO2	Determine the important analytical quantities associated with scalar and vector fields.	PO1(3)
CO3	Solving line integral, double integral and applying these knowledge to find out work done by a force, volume of regions in space, center of gravity of a mass etc.	PO1(2)

Course Content

Module-I

(3hr+0hr+2hr)

Curvature and Radius of curvature in Cartesian form.

Project 1: To find radius of curvature (Parametric form)

Module-II

(2hr+0hr+4hr)

Vector algebra: Algebraic operations, Scalar product, Inner product, Vector product, Scalar and vector triple product.

Project 2: Problems based on inner product, scalar and vector triple products.

Project 3: To find angle between two vectors, area of triangle and parallelogram, volume of parallelepiped and tetrahedron using vector algebra.

Module III (2hr+0hr+4hr)

Gradient of scalar point function, Directional derivatives, Divergence and curl of vector point functions, second order differential operator: The Laplacian operator.

Project 4: To prove the identities with regards to Gradient, Divergence and Curl.

Project 5: To find normal vector to a plane using Gradient of scalar point function.

Module-IV: (3hr+0hr+0hr)

Line Integrals (path dependence and path independence), double integrals.

Module-V: (3hr+0hr+0hr)

Surface Integrals, Triple Integrals

Module-VI: (4hr+0hr+2hr)

Green's and Gauss's Theorems (without proof) and their applications to evaluate the integrals.

Project 6: To find center of gravity and moments of inertia of a mass density

Module-VII: (3hr+0hr+0hr)

Stokes' Theorem (without proof) and its applications to evaluate the integrals.

Text Books:

1. A Text book of Calculus Part – II by Shanti Narayan, Publisher: S. Chand & Company Ltd. Chapters: 8 (Art. 24, 25 (only for Cartesian and parametric curves)).
2. Advanced Engineering Mathematics by E. Kreyszig, Publisher: John Wiley & Sons Inc.- 8th Edition, Chapters: 8 (8.1 to 8.3, 8.9 to 8.11), 9 (9.1 to 9.7, 9.9).

Mechanics for Engineers

Code	Course Title	Credit	T-P-PJ
CUTM1006	Mechanics for Engineers	3	2+1+0

Course Objective

- To provide the students with a clear and thorough understanding on fundamentals of mechanics as applied to solve real-world problems.

Course outcomes

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Students will gain the knowledge on application of mechanics, will be able to construct free body diagrams and calculate the reactions necessary to ensure static equilibrium.	PO1(3)
CO2	Students will be able to think and analyse the frictional forces involved in planes and the effect of friction in static and dynamic conditions.	PO1 (3)
CO3	Students will be able to solve different problems of kinematics and kinetics.	PO2 (2), PO3(2)
CO4	Students will learn to handle different tools and instruments used in mechanics.	PO5(1)

Course content

Module I: Force and Moment

(4 Hrs. + 2 Hrs. practices)

Law of Transmissibility of a Force, Composition and Resolution of Forces, Resultant and Equilibrant, Resultant of Two and Several Forces, Moment of a Force and a Couple, Varignon's Principle of Moment

Practice-1: Verification of laws of parallelogram law of forces

Module II: Equilibrium

(3 Hrs. + 2 Hrs. practice)

System Isolation and Free Body Diagram, Particle Equilibrium, Lami's theorem, General Conditions of Equilibrium, Types of Supports and Support Reactions, Rigid Body Equilibrium.

Practice-2: To verify the condition of equilibrium by finding reactions at the support of a beam

Module III: Friction

(2 Hrs. + 2 Hrs. practice)

Basic Terms used in Dry Friction, Laws of Coulomb Friction, Equilibrium of Bodies on a Inclined Plane, Ladder Friction, Belt Friction

Practice-3: Determination of Angle of Repose

Module IV: Centroid

(2 Hrs.)

Axis of Symmetry, Centroid of Lines, Areas and Volumes, Centroid of Composite Section.

Module V: Moment of Inertia

(3 Hrs. + 2 Hrs. practice)

Rectangular and Polar Moment of Inertia, Radius of Gyration, Parallel Axis Theorem and Perpendicular Axis Theorem, Moment of Inertia of Composite Section

Practice-4: Determination of Moment of Inertia of a fly wheel.

Module VI: Kinematics of Linear Motion

(3 Hrs.)

Kinematics of a Particle, Uniform and Variable Acceleration, Motion under Gravity

Module VII: Kinetics of Linear Motion

(3 Hrs. + 4 Hrs. Practice)

Principles of Dynamics such as Newton's Second Law, Work-Energy Principle, Impulse-Momentum Principle, Law of Conservation Law of Momentum and Energy

Practice-5: Verification of Newton's second law of motion.

Practice-6: Verification of conservation of momentum in collision.

Text Books:

1. Engineering Mechanics; Statics and Dynamics by A. K. Tayal, Umesh Publications.

Reference Books:

1. Engineering Mechanics by S. Timoshenko, D.H. Young and J.V. Rao, Tata McGraw Hill
Engineering Mechanics by D.S. Kumar, S.K. Kataria and Sons.

Optics and Optical Fibres

Code	Course Title	Credit	T-P-PJ
CUTM1007	Optics and Optical Fibres	3	2+1+0

Course Objective

- To train the students for the applications of the solar cell, laser and optical fiber in the field of engineering and technology.
- To learn and practice the techniques used by optical phenomena so that these can be applied to actual field studies.

Course outcomes

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Students will gain knowledge on optical phenomena, different light sources and their uses, solar cell, laser, optical fiber and instrumentation involved.	PO1(2)
CO2	Students will develop the understanding and analysis of the applications of Optical fibres and Lasers.	PO1 (3)
CO3	Students will learn to solve problems on various optical phenomena.	PO2 (2), PO3(2)
CO4	Students will learn to handle different tools and instruments used in optical experiments.	PO5(1)

Course Content

Module I: Reflection and Refraction (Derivation is not required) (3hours +2hours)

Reflection at plane surface, reflection at spherical mirrors, Paraxial rays and approximation. Sign convention, Location of the image formation, Spherical mirror equation, Refraction, Total internal reflection, Dispersion by a prism, Refraction through a prism.

Practice: 1

To determine the refractive index of a glass slab using a travelling microscope.

Module II: Lenses (Derivation is not required)

(2hours+2hours)

Definition, Types of Lenses, Terminology associated with the Lens, Sign Convention

Location of the image formation by graphical method for Lenses, Lens formula.

Practice: 2

To determine the dispersive power and Cauchy constants of the material of a prism using mercury source.

Module III: Interference (Derivation is not required)

(2hours+2hours)

Superposition principle, definition of Interference, Coherence, Young's double slit experiment, Newton's rings theory- Determination of wavelength of light.

Practice: 3

Newton's Rings-Refractive index of liquid

Module IV: Diffraction and Polarization (Derivation is not required)

(3hours+2hours)

Types of diffraction, Fraunhofer diffraction at a single slit, Diffraction at N-parallel slits (plane diffraction grating) Polarisation, Types of polarized light and their representation, Brewster Law. Malus Law, polarization by double refraction, polarimeter, Applications of polarized light.

Practice: 4

To find the grating element of a plane transmission diffraction grating.

Module V: Optical Properties and Laser

(3hours+2hours)

Scattering, refraction, reflection, absorption & transmission, Introduction to optoelectronics, Concept of Light Emitting Diode, Stimulated and spontaneous emission, Basic principle of Lasers, Population inversion, Laser Pumping, Different levels of laser system, Ruby Laser, Applications of Lasers (Medicine, Metrology, Defenses, Nuclear energy, in communication, in consumer electronics industry)

Practice: 5

Wave length of LASER source by diffraction grating method

Module VI: Optical Fibers (3hours+1hours)

Introduction to fiber optics, structure of optical fibers, classification of optical fibers on the variation of refractive index, Classification of optical fibers on the variation of mode of transmission/core diameter, Numerical Aperture, Acceptance angle. Principle of optical fibers communication, optical communication (block diagram only).

Practice: 6

To find the numerical aperture of a given optic fiber and hence to find its acceptance angle.

Module VII: Optical Fibers**(4hours+1hours)**

Attenuation in optical fibers (Qualitative only-Scattering losses, Absorption losses, bending losses) Fiber Materials-Glass fibers, Plastic fibers, Light sources for fiber optics V-number of an optical fiber, optical fiber cables design, optical fiber connection, fiber splices, fiber connectors. Application of optical fibers- Cable TV, Networking, Power companies, Imaging, Sensors, Medical (Dental surgery, Endoscopy, Surgery)

Practice: 7

Measurement of bending loss.

Text Books:

1. A TextBook of Optics by M.N. Avadhanulu, BrijLal, N. Subrahmanyam, S Chand; 23rd Rev. Edn. [Module I&II]
2. Engineering Physics, by D.Thirupathi Naidu, M.Veeranjaneyulu, V.G.S Book links,2017.[Module-III,IV]
3. Principles of Engineering Physics-2 by Md.Khan, S.Panigrahi, Cambridge University Press 2016. [module-V,VI&VII]

Reference Books:

1. Optics by AjoyGhatak, McGraw Hill Education; 6 edition, 2017.
2. Physics-I for engineering degree studentsbyB.B. Swain and P.K.Jena.
3. Concepts in Engineering Physics by I Md. N. Kha, 2016.

Applied Analytical Chemistry

Code	Course Title	Credit	T+P+PJ
CUTM1008	Applied Analytical Chemistry	3	2+1+0

Course Objective

- Explain fundamental principles for environmental analytical methods (titration, electrochemistry, instrumentation and basic parameters of water, soil, fuel, etc)
- Point out suitable analytical techniques for analyzing a specific compounds in an environmental matrix

Course Outcomes:

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Able to gain Knowledge on various water softening methods, soil analysis methods, fuels, electrochemical phenomena and error analysis	PO1 (3)
CO2	Analytical skill and Critical Thinking	PO2(3), PO5(1)
CO4	Use of Tool, Design and Development (Hands-on/Technical skill)	PO3(3)

Module-I

(4Hrs)

Water analysis:

Water softening processes: Lime-Soda, Zeolite and Ion exchange methods. Removal of DO and dissolved CO₂ from water by De-aeration method, Desalination of Brackish water by Reverse osmosis and electro dialysis process. Numerical on calculation of hardness of water, Lime-Soda calculation, Alkalinity of water.

1. Determination of hardness of water by EDTA method. (V. lab)
2. Determination of alkalinity of water. (V. lab)
3. Determination of Dissolved Oxygen in water. (V. lab)
4. Determination of Biological Oxygen Demand. (V. lab)
5. Determination of Chemical Oxygen Demand. (V. lab)

Module-II

(2Hrs)

Soil Analysis:

Soil profile, Structure, and properties, Determination of soil properties, Fertility of the soil.

6. Determination of specific gravity of the soil by using piknometer. (V.lab)
7. Determination of pH and electrical conductivity of soil sample.
8. Determination of moisture content in soil by oven drying method. (V. lab)

Module-III

(4Hrs)

Fuel Chemistry-I:

Classification, combustion and chemical principles involved in fuel, calorific value: gross and net calorific values and their determination by bomb calorimeter. Proximate and ultimate analysis of coal and their importance. LPG, Water gas, producer gas, CNG.

9. Determination of calorific value of a fuel sample by using Bomb calorimeter. (V. lab)
10. Analysis of flue gases by Orsat's apparatus.

Module-IV

(3Hrs)

Fuel Chemistry-II

Petroleum: its chemical composition and fractional distillation, cracking of heavy oil residues – thermal and catalytic cracking, knocking and chemical structure, octane number, synthesis and applications of bio-fuels, Photovoltaic cell.

11. Synthesis of biodiesel by transesterification process

Module-V **(3Hrs)**

Corrosion-Mechanisms, Factors affecting Corrosion; Protection from corrosion.

12. Estimation of ferrous ion in the given solution using standard potassium dichromate.

Module-VI **(2Hrs)**

Electrochemical Phenomenon

Electrochemical cell, Electrode potential, Determination of pH of a solution Using Clomel/ Quin Hydrone Electrode.

Module-VII **(2Hrs)**

Error in Chemical analysis

Types of errors, Accuracy and precision, Absolute and relative uncertainty, mean and standard deviation.

Applied Engineering Material

Code	Course Title	Credit	T+P+PJ
CUTM1009	Applied Engineering Material	3	2+0+1

Course Objective

- To give an introduction to materials, ceramics, polymers, and electronic materials in the context of a molecular level understanding and their application in various field

Course Outcome

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Able to gain Knowledge on various materials used in the field of engineering and technology.	PO1 (3),
CO2	Analytical skill and Critical Thinking	PO2(3), PO5(1)
CO4	Use of Tool, Design and Development (Hands-on/Technical skill)	PO3(3)
CO5	Research	PO4(3), PO5(1)

Course content

Module I: New Materials/Nanomaterials

(5hrs)

Nanostructures and Nanomaterials: classification (Dimensionality, Morphology/ shape/structure of nano-entities, New Effect/ Phenomena). Hybrid nanomaterials. Effect of size, structure, mechanism, and property on material performance. Applications of nanomaterials in catalysis, telecommunication and medicine.

Project

Synthesis of TiO₂ and ZnO nanoparticles by Sol Gel, Sonication and Precipitation method and study their application.

Module II: Carbon Nanomaterials

(5hrs)

Carbon nanomaterials, such as graphene, carbon nanotubes (CNTs), crystalline diamond, and diamond-like carbon, Properties and application of fullerenes,

Project

Synthesis and Fabrication of Graphene and Graphene Oxide by sol-gel techniques

Module III: Polymer

(5hrs)

Mechanism of polymerization and synthesis of polymers, Copolymerization, Viscoelasticity. Elastomers-structure, conducting polymers and applications, Fabrication and moulding of polymers, Synthesis, properties and uses PMMA, formaldehyde resins, melamine-formaldehyde-urea resins

Project

Preparation of polystyrene by anionic/cationic/emulsion polymerization method

Module IV: Composites

(5hrs)

Composites: characteristics, types and applications, Nanocomposites, Polymer/ Metal oxide nanocomposites and its application

Project

Fabrication of Ceramic matrix particulate composite by powder metallurgy route.

Module V: Adhesives Lubricants

(4hrs)

Adhesives, adhesive mechanism and applications, Lubricants-physical and chemical properties, types and mechanism of lubrication. Additives of lubricants and freezing points of lubricants

Module VI: Energy Storages material-I

(4Hrs)

Fundamental aspects related to energy storage and conversion, lithium ion batteries, Lead acid batteries; Nickel Cadmium batteries; advanced batteries

Module VII: Energy Storages material-II

(4Hrs.)

Super capacitors, fuel cells and Photovoltaic, Future of battery technology.

Project

Fabrication of Fuel cell and its application

Text Books:

1. A Textbook of Engineering Chemistry, by Shashi Chawla
2. Engineering Chemistry, by P. C Jain and M. Jain
3. Advanced Polymer Chemistry, by M. Chanda

Reference Books:

1. Surfactants and Polymers in Aqueous Solution, by K. Holmberg, B. Jonsson, B.

2. Kronberg and B. Lindman
3. Energy Scenario beyond 2100, by S. Muthukrishna Iyer

Environmental Studies

Code	Course Title	Credit	T+P+PJ
CUTM1010	Environmental Studies	2	0+0+2

Course Objective

- To introduces the environmental consequences of Industries on the human health and methods for minimizing their impact through technology and legal system to the undergraduate students.

Course outcomes:

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Able to gain Knowledge on Environment as well as environmental pollution and its consequences on global climate change.	PO1 (3)
CO2	Analytical skill and Critical Thinking	PO2(3), PO ₅ (1)
CO4	Use of Tool, Design and Development (Hands-on/Technical skill)	PO3(3)
CO6	Environment and Sustainability	PO6(2), PO ₇ (3)

Course content

Module-I: Fundamentals of Environmental Sciences

Assignment-1: Multidisciplinary nature of Environmental science

Assignment-2: Components of Environment

Assignment-3: scope and importance of environmental science

Module: II Ecology and Ecosystem

Assignment-1: Structure and function of ecosystem

Assignment-2: Types of ecosystem

Assignment-3: Ecological Succession

Module III- Biodiversity and its conservation

Assignment-1: Concepts of Biodiversity

Assignment-2: Biodiversity at local level, global level and National level

Assignment-3: Conservation of Biodiversity

Module IV- Natural resources and its conservation

Assignment-1: Land resources and its conservation

Assignment-2: Forest resources and its conservation

Assignment-3: Water resources and its conservation

Assignment-4: Energy resources and its conservation

Module V Environmental pollutions and its control measure

Assignment-1: Soil pollution

Assignment-2: Water pollution

Assignment-3: Air pollution

Assignment-4: Noise pollution

Module VI Natural Hazards and Disaster management

Assignment-1: Concepts of natural hazards

Assignment-2: Different types of natural hazards: cyclone, earthquake, volcanic eruption etc.

Assignment-3: Process of disaster preparedness and its management

Assignment-4: Solid waste management

Module VII Environmental issues and laws

Assignment-1: Major environmental issues like climate change, global warming, green house effects, Ozone layer depletion, Acid rain

Assignment-2: Water Act, 1974

Assignment-3: Air Act, 1981

Assignment-4: Environmental protection act, 1986

Reference Books:

1. Environmental Studies by U.N. Dash & H. D. Kumar, India Tech Publication, New Delhi
2. Environmental Studies by R. Rajagopalan Oxford University Press
3. Environmental Science and Engineering, 2E, by Aloka Debi, University Press

Course Structure Basket - II

Course Code	Course Title	Credits	Course Type T+P+PJ

Syllabus

Optimization Techniques

Code	Course Title	Credit	T-P-PJ
CUTM1011	Optimization Techniques	2	0+2+0

Course Rationale:

Operations research (OR) have many applications in science, engineering, economics, and industry and thus the ability to solve OR problems are crucial for both researchers and practitioners. Being able to solve the real life problems and obtaining the right solution requires understanding and modelling the problem correctly and applying appropriate optimization tools and skills to solve the mathematical model. The goal of this course is to teach you to formulate, analyse, and solve mathematical models that represent real-world problems. We will also discuss how to use EXCEL for solving optimization problems

Course Objectives:

To learn about the operations, research techniques, model formulation and applications used to solve business decisions by using computer software

Course Outcomes:

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Ability to apply the knowledge on optimization methods and algorithms to develop different types of optimization problems	PO1(3)
CO3	Ability to solve various real life optimization problems by using computer software	PO2(2)
CO5	Ability to do research by applying optimization techniques in problems of Engineering and Technology	PO4(3)

Course contents

Module-I: Linear Programming: Graphical Method, Simplex method, Penalty Method,

Module-II: Transportation Models, Assignment Models, Sequencing and Scheduling Models by Johnson's Algorithm

Engineering Economics and Costing

Code	Course Title	Credit	T-P-PJ
CUTM1012	Engineering Economics and Costing	3	2+0+1

Course Rationale:

This course aims at providing the student with advanced concepts of engineering economic analysis and its role in engineering decision making.

Course Objectives:

1. Facilitate students to understand the basics of Economics and its application in the field of engineering.
2. Enable students to understand the concepts of the time value of money and techniques for evaluation of engineering projects along with it critically analyse in identifying the actual cost of fixed assets used over a period of time in a business organization.
3. Equip students with the skills required to understand cost statements/records of the product and its effect on decision making

Course Outcomes:

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Students will get the knowledge of the microeconomics concepts related to business and its impact on enterprise	PO1(3)
CO2	Development of awareness and understanding time value of money and techniques for evaluation of engineering projects along with it critically analyse in identifying the actual cost of fixed assets used over a period of time in a business organization.	PO2(3) & PO11(2)
CO3	Apply cost concepts to analytical business management decisions such as pricing a product and services.	PO2(3)

Course contents

Module: I: Engineering Economics – Nature and scope

General concepts on Micro & Macro Economics. The Theory of demand, Demand function, Law of demand and its exceptions, Elasticity of demand, Law of supply and elasticity of supply. Theory of production, Law of variable proportion, Law of returns to scale.

Module-II: Time value of money:

Simple and compound interest, Cash flow diagram, Principle of economic equivalence. Evaluation of engineering projects: Present worth method, Future worth method, Net present value method, internal rate of return method, Cost-benefit analysis in public projects. Depreciation: Meaning Causes, Factors affecting depreciation, Methods of providing depreciation, Straight Line Method & Diminishing Balance Method

Module-III

Cost concepts, Elements of costs, Preparation of cost sheet, Segregation of costs into fixed and variable costs. Break-even analysis (Simple numerical problems to be solved)

Indian Banking System: Banks: Meaning, nature, characteristic of the Indian banking system, functions of commercial banks, functions of Reserve Bank of India, Overview of Indian Financial System.

Project Management

Code	Course Title	Credit	T-P-PJ
CUTM1013	Project Management	3	2+0+1

Course Objective:

- The successful development and implementation of all project's procedures.
- Learn project management methodology to initiate and manage projects efficiently and effectively.
- Acquire key project management skills and strategies for Productive guidance, efficient communication and supervision of the project's team.
- The achievement of the project's main goal within the given constraints

Course outcomes:

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Acquire 10 knowledge area identified by PMI and its application while delivering a projects	PO1(3)
CO2	Students will acquire required technical skill to develop a Project Charter and Project Management Plan document for any project	PO2(3), PO3(3)
CO7	Acquire necessary managerial skill to build team and resolve all issues/challenges to deliver a project	PO9(3), PO7(2)
CO8	Will build soft skill to lead and comply and communicate with all stakeholder's expectation	PO10(3), PO8(3)

Course Content:

Unit: I

Project Management framework; Introduction to Project Management; Project Life Cycle and Organisation, Project vs. Operational work, Stakeholders, Organisational Influences

Project Management Process for a Project, groups, Initiating, planning, executing, monitoring &controlling and closing process groups.

Project management Knowledge area;

Project Integration Management; Develop project charter, develop project management plan, direct and manage project execution, monitor and control project work, perform integrated change control, close project or phase.

Unit: II

Project Scope Management; collect requirements, define scope, create WBS, verify scope, control scope

Project Time Management; Define activities, sequence activities, estimate, develop and schedule

Project Cost Management; Estimate costs, determine budget, control costs

Unit: III

Project Quality Management; Plan quality, perform quality assurance, perform quality control

Project HR Management; Develop HR plan, acquire project team, develop and manage project team

Project Communications Management; Identify stakeholders, plan communication, distribute information, manage expectation of stake holders, report performance

Unit: IV

Project Risk Management; Plan risks; identify risks, perform quality and quantitative risk analysis, plan risk responses, monitor and control risks

Project Procurement Management; Plan procurements, conduct procurements, administer procurements, close procurements

Project Stakeholders Management; Identifying stakeholders, stakeholder analysis, engagement

Note: Students can use any of these software for their project; MS. Excel/ Bitrix 24/Primavera/ Microsoft Projects

Books Recommended:

1. Project Management: A Managerial Process, Clifford F Gray & Eric W Larson, Tata McGrawHill [**Text book**]
2. A Guide to the Project Management Body of Knowledge, 6th Edition, PMI
3. Project Management- A system Approach to Planning, Scheduling and Controlling (Harold Kerzner). CBS Publishers and Distributors, New Delhi..
4. Projects, Preparation, Appraisal and Implementation (Prasanna Chandra), 3rd Edition, Tata Mc Graw Hill, New Delhi.
5. Project Management (Nagarajan, K), New Age Publishers, New Delhi.
6. Project Management. A Managerial Approach (Meredith, R.J and Mantel, S.J), Wiley (India).

Gender, Human Rights and Ethics

Code	Course Title	Credit	T-P-PJ
CUTM1014	Gender, Human Rights and Ethics	3	1.5+0+1.5

Course Objectives

- This course is about gender, human rights and ethics in which the student will be sensitized and exposed to related issues in the context of business and organisations in India. The specific objectives are:
- To develop an understanding of gender, human rights and ethics in an unequal society like India.
- Sensitisation of how gender, human rights and ethics are significant in organisations.
- Integrating concerns related to gender, human rights and ethics in organisations.

Course Outcomes

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Students will get knowledge of understanding the complexity of issues and challenges relating to gender, human rights and ethics	PO1(2)
CO3	Be sensitive to gender, human rights and ethics within an analytical and organizational context	PO3(1), PO3(2)
CO7	Students will appreciate and practice ethical means in personal and professional life	PO8(3)

Course Syllabus

Module 1

Difference between sex and gender; social construction of gender and its outcomes in the form of behaviour, roles, gender based division of labour, hierarchy; gender relations. Gender issues in organisations - significance of relations between structures, practices, context, interactions and power for construction of gender at organisational level.

Gender implications at workplace, management and leadership, Laws and Acts, Comparing different types of organisations; how to create a gender sensitive organisation.

Module 2

Introduction to human rights, Meaning and Definition, Types, Human Rights Law: Protection, violation and the legal framework for their protection - International Human Rights Law, Universal Declaration of Human Rights, Conflicts of Rights and its Significance to Organisations: Challenges of the past and challenges for the future. Persistence of social discrimination and inequality; efforts in the search for justice for past violations, continued struggle for human rights and accountability in an organisational context.

Module 3

Introduction to and study of ethics; Indian and Western ethics, Different ethical systems and perspectives; ethical relativism and its implications, utilitarianism, duty ethics and virtue ethics in organisations, Critique of various ethical positions and develop their own position in an organizational context.

Project

1. -Gender Responsive Governance in times of COVID 19
2. SDG - Gender Equality Goal 5
3. Gender, Sustainability and Environment
4. Women Environment and Sustainable Development A Ca Good Practices of Gender Mainstreaming in India
5. Good Practices for Gender Mainstreaming
6. Gender Equality Case Study
7. Gender Equality - Kerala Case Study
8. Basic concepts on human rights; history of human rights; current significance
9. Violation and legal framework for the protection of human rights
10. Human rights and sustainability framework
11. Human Rights and Sustainable Development
12. Human rights in the organizational context

Books:

1. Arihants UGC NET Human Rights and Duties
2. Kapoor, S. K. Central Law Agency's Human Rights under International Law and National Law
- Ciapham Andrew, 2015, Human Rights: A Very Short Introduction, Oxford University Press
- Smith Rhona, 2015, Textbook on International Human Rights, Oxford University Press

Climate Change, Sustainability and Organisations

Code	Course Title	Credit	T-P-PJ
CUTM1015	Climate Change, Sustainability and Organisations	3	1.5+0+1.5

Course Rationale:

This course is about climate change, sustainability and its implications for organisations. Climate change and sustainability are closely interlinked. Students will be exposed to related issues, challenges and debates on the subjects. They will develop an understanding of how organizational performance gets affected by climate change today. As organisations grow and diversify in India, there is a need to sensitise Management students to the significance of climate change and its impact on humanity and environment; Sustainable Development Goals (SDGs) and integrated reporting framework for sustainability of organisations.

Course Objectives:

- To develop an understanding about climate change in general, responses and debates
- To create awareness about the impact of climate change on organizations in performance, growth and sustainability
- To facilitate in developing reference points to factor in aspects of climate change in organizational planning and development

Course Outcome:

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Students will get knowledge of climate change issues, challenges and debates	PO1(2)
CO2	They will be sensitive to its implications for organizations in different critical sectors	PO2(1)
CO6	The course will give students decision taking ability and to develop strategies for perspective planning of organizations for sustainability	PO3(2), PO7(3)

Course Contents:

Module 1: Climate Change and Organisations

Basics of climate change; impacts on various sectors; responses and mitigation efforts by the state and non-state agencies; debates and critiques, Sectoral implications of climate change – Agriculture and Forestry; Transportation; Buildings; Energy; Industry and Manufacturing, Climate change – specific impacts (Migration, Disasters and Pandemics), Mitigation and adaptation keeping the sustainability of business organisations

Projects: Case study, videos, small group workshops, book reviews

Module 2 – Sustainability in Organisations

Sustainable development, debates, SDGs, challenges and opportunities; The business case and leadership for action Regulatory environment and International policy; Integrated Reporting Framework for Sustainability, Production and consumption; Design, technology, and planning for sustainability, Communication and marketing; Collaboration and partnerships

The 17 sustainable development goals (SDGs) to transform our world:

GOAL 1: No Poverty

GOAL 2: Zero Hunger

GOAL 3: Good Health and Well-being

GOAL 4: Quality Education

GOAL 5: Gender Equality

GOAL 6: Clean Water and Sanitation

GOAL 7: Affordable and Clean Energy

GOAL 8: Decent Work and Economic Growth

GOAL 9: Industry, Innovation and Infrastructure

GOAL 10: Reduced Inequality

GOAL 11: Sustainable Cities and Communities

GOAL 12: Responsible Consumption and Production

GOAL 13: Climate Action

GOAL 14: Life Below Water

GOAL 15: Life on Land

GOAL 16: Peace and Justice Strong Institutions

GOAL 17: Partnerships to achieve the Goal

Projects:

1. Climate change impacts on agriculture and policy responses – what is the current practice and its implications for the sector and people; give your own recommendations based on your understanding of issues, challenges, debates, critiques.
2. Marine fishing – fisher folk
3. Forest dwellers
4. Business organisations – MSMEs, manufacturing, service industries; application of the integrated framework for sustainability reporting.

Job Readiness

Code	Course Title	Credit	T-P-PJ
CUTM1016	Job Readiness	6	0-6-0

Course Objectives

To develop additional skills (verbal, logical, quantitative and reasoning) required to enhance employability as well as the entrepreneurial ability of the students

Course Outcomes

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Ability to enhance listening, speaking, reading and writing skills of the students	PO1(3),
CO2	Students must achieve the scores in IELTS 6.5	PO2(2)
CO3	Increase the Problem solving and Decision taking ability in students.	PO2(1)
CO7	It can enable ethical principles among students and they will commit to professional ethics and responsibilities.	PO8(2)
CO8	It can improve students' soft skills to communicate while working in a team. Also it helps to engage in independent research and lifelong learning in the technology context.	PO9(2) , PO10(2), PO11(1) , PO12(2)

Note: A student will be awarded the credits and grades as outlined in the attached presentation:
<https://drive.google.com/file/d/1Wst-jdAJuHHVtYC4F-p3SKuw1PHWOI1U/view?usp=sharing>

Course Syllabus

Course Division

Course I: IELTS - Reading, Listening, Speaking, and Writing

Course II: IELTS Verbal

Course III: Quantitative Aptitude

Course IV: Logical Reasoning

Course I: IELTS - Reading, Listening, Speaking and Writing

Module I: IELTS Reading (18hrs)

- Skimming and Scanning
- Sentence Completion
- Choose the Correct options (A, B, C, D)
- Locating the Specific Information
- Assessment on Reading Skill

Module II: IELTS Listening (6hrs)

- Notes/ Form/Table completion
- Label the Map/Passage, Multiple Choice Questions
- Complete the Sentences, Listening to Find Information
- Assessment on Listening Skills

Module III: IELTS Speaking (18hrs)

- Speaking about yourself, your family, your work and your interests
- Introduction & Interview
- Topic Discussion (e.g, Environment, Covid 19, Job)
- Assessment on Speaking Skills

Module IV: IELTS Writing (6 hrs)

- Summarising the chart, table or graph
- Comparing and contrasting graphs and tables
- Describing maps & diagrams
- Agreeing & disagreeing
- Expressing a personal view & opinion
- Assessment on Writing Skill
- CV Writing (2nd year)
- Letter Writing
- Email Writing(2nd year)
- Getting Started –writing an introduction

Course II: IELTS Verbal

Module I: Grammar (4 Hrs)

- Articles
- Prepositions
- Subject-Verb
- Spotting Errors
- Sentence Correction

Module II: Vocabulary (5 Hrs)

- Synonyms
- Antonyms
- Contextual Vocabulary

Module III: Reading Comprehension (3 Hrs)

- Paragraph/ Sentence Completion
- Jumbled Sentences/ Jumbled Paragraph
- Reading Comprehension

Module IV: Verbal Analogies (3 Hrs)

Course III: Quantitative Aptitude

Module I: Number System & Operation (14 Hrs)

- Speed Math-1 : Multiplication tricks, Square, cube, square root, Cube root tricks
- Speed Math-2 : Speed Calculations
- Number System-01 : Operation on Numbers, Classification of Numbers, Tests of Divisibility, Unit Digit Calculation
- Number System-02 : Arithmetic Progression, Geometric Progression, Factors & Factorials, Trailing Zeroes, Remainder Theorem
- HCF & LCM : Concepts, short tricks, question discussion
- Average : Concepts, short tricks, question discussion
- Assessments

Module II: Basic Arithmetic (16 Hrs)

- Percentage-01 : Basics of Percentage, Effective percentage, shortcuts
- Percentage-02 : Advanced questions and discussions
- Profit & Loss-01 : Basics and advanced questions of Profit & Loss and shortcuts
- Profit & Loss-02 : MRP, Discount, Successive discount
- Ratio & Proportion : Types of ratios, Basics & Advanced Question
- Age : Concepts & Shortcuts
- Partnership : Concepts & Shortcuts
- Mixture & Alligation : Rule of Alligation, Basics & Advanced question, Short tricks
- Assessments

Module III: Time & Analysis (17 Hrs)

- Time, Speed, Distance : Concepts, Problems based on relations, Average speed, Stoppage time
- Trains : Relative Speed & All types of train problems
- Boats & Streams : Basics, Upstream, Downstream & Shortcuts
- Race : All concepts & Shortcuts
- Time & Work : Efficiency, wages, alternative day, chain rule
- Pipes & Cistern : Positive & Negative work
- Simple Interest : Concepts & Shortcuts on Simple Interest & Installments
- Compound Interest : Concepts & Shortcuts on Simple Interest & Installments
- Logarithm : All Formulae, concepts & Shortcuts
- Assessments

Module IV: Advanced Arithmetic (16 Hrs)

- Equation : Linear & Quadratic
- Permutation : All concepts & Shortcuts on factorial, fundamental principles of counting
- Combination : All concepts & Shortcuts on Selection (Groups/teams)
- Probability : Terms related to Probability, Event, Theorems related Probability, Conditional Probability. Shortcuts on coins, dices, balls, cards, etc
- Data Interpretation : (Bar/Pi-Chart /Line) graph
- Mensuration : Area & Volume
- Height & Distance : Lines of Sight, Horizontal line, Angle of Elevation, Angle of Depression
- Assessments

Course IV: Logical Reasoning

Module I: Verbal Reasoning-I (14 Hrs)

- Series-1 : Number series (Missing & Wrong)
- Series-2 : Letter, Alpha numeric, Miscellaneous series
- Coding & Decoding : Letter Coding, Number coding, Message coding, Substitution coding, Conditional coding
- Word Problem : Analogy, Odd man out, word formation, letter pair
- Logical Thinking : Brain Riddles
- Assessments

Module II : Verbal Reasoning-II (14 Hrs)

- Order & Ranking : Ranking & Sequence
- Direction Sense Test : Shortest Distance, Angular movement concept and Dusk & Dawn
- Clock : Concepts of Angle, Reflex angle, Right angle Opposite, Coincide and Incorrect clock
- Calendar : All concepts & Shortcuts
- Blood Relation : Jumbled-up descriptions, coded relations, Relation Puzzles

- Assessments

Module III : Non Verbal Reasoning (14 Hrs)

- Cubes & Dices
- Cubes & Cuboids
- Embedded Figure & Figure series
- Figure Puzzle & Figure grouping
- Figure Counting
- Mirror & Water Image
- Paper Cutting & Paper folding
- Assessments

Module IV: Advanced Reasoning (16 Hrs)

- Sitting Arrangement : Circular, Square, Rectangular, Linear, Triangular
- Puzzle : Box, Floor, Month, Day
- Advanced Puzzle : 3 variable
- Logical Venn Diagram
- Syllogism
- Statement & Conclusion
- Data Sufficiency
- Assessments

Course Structure Basket - III

Course Code	Course Title	Credits	Course Type T+P+PJ

Industrial IoT and Automation

Code	Course Title	Credit	T-P-PJ
CUTM1017	Industrial IoT and Automation	6	3+2+1

Objective

- Students will learn the new evolution in hardware, software, and data.
- While the promise of the Industrial Internet of Things (IIoT) brings many new business prospects, it also presents significant challenges ranging from technology architectural choices to security concerns.
- Students acquire the upcoming Industrial Internet of Things: Roadmap to the Connected World Course offers important insights on how to overcome these challenges and thrive in this exciting space.

Course outcome

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Able to gain Knowledge of key IIoT concepts including IoT technologies, architectures	PO1 (3),
CO4	Able to identify sensors, localization, wireless protocols, data storage and security	PO3(3)

Course content

MODULE 1: Introduction & Architecture

Theory

What is IIoT and connected world? The difference between IoT and IIoT, Architecture of IIoT, IOT node. Challenges of IIOT

Practice

1. Introduction to Arduino, ES8266, Introduction to raspberry Pi.

MODULE 2: IIOT Components

Theory:

Fundamentals of Control System, introductions, components, closed loop & open loop system. Introduction to Sensors (Description and Working principle): What is sensor? Types of sensors, working principle of basic Sensors -Ultrasonic Sensor, IR sensor, MQ2, Temperature and Humidity Sensors (DHT-11). Digital switch, Electro , Mechanical switches.

Practice:

2. Measurement of temperature & pressure values of the process using raspberry pi/node mcu.
3. Modules and Sensors Interfacing (IR sensor, ultrasonic sensors ,Soil moisture sensor) using raspberry pi/node mcu.
4. Modules and Actuators Interfacing (Relay, Motor, Buzzer) using raspberry pi/node mcu.

MODULE 3: Communication Technologies of IIoT

Theory:

Communication Protocols: IEEE 802.15.4, ZigBee, Z Wave, Bluetooth, BLE, NFC, RFID
Industry standards communication technology (LoRAWAN, OPC UA, MQTT), connecting into existing Modbus and Profibus , Technology, wireless network communication.

Practice:

5. Demonstration of MQTT communication
6. Demonstration of LoRa communication.

MODULE 4: Visualization and Data Types of IIoT**Theory:**

Front end EDGE devices, enterprise data for IIoT, emerging descriptive data standards for IIoT, cloud data base, cloud Computing, fog or edge computing, Connecting an Arduino /raspberry pi to the Web: Introduction, setting up the Arduino/raspberry pi development Environment, Options for Internet connectivity with Arduino, configuring your Arduino/raspberry pi board for the IoT.

Practice:

7. Visualization of diverse sensor data using dashboard (part of IoT's 'control panel')
8. Sending alert message to the user.

MODULE 5:**Theory**

Extraction from Web: Grabbing the content from a web page, Sending data on the web, troubleshooting basic Arduino issues, types of IoT interaction , Machine to Machine interaction (M2M).

Practice

9. Device control using mobile Apps or through Web pages.
10. Machine to Machine communication

MODULE 6: Control & Supervisory Level of Automation**Theory**

Programmable logic controller (PLC), real-time control system, Supervisory Control & Data Acquisition (SCADA). HMI in an automation process, ERP &MES

Practice

11. Digital logic gates programming using ladder diagram
12. Implementation of Boolean expression using ladder diagram
13. Simulation of PLC to understand the process control concept.

Module 7: Application of IIOT

Case study: Health monitoring, Iot smart city, Smart irrigation, Robot surveillance

Text Books:

1. Industrial IoT Challenges, Design Principles, Applications, and Security by Ismail Butun (editor)
2. Internet of Things with Arduino Cookbook, Marco Schwartz, ISBN 978-1-78528-658-2

Reference Books:

1. The Internet of Things in the Industrial Sector, Mahmood, Zaigham (Ed.) (Springer Publication)

Data Analysis and Visualization Using Python

Code	Course Title	Credit	T-P-PJ
CUTM1018	Data Analysis and Visualization Using Python	4	0+1+3

Course Objective

- How to tell a story from data
- How to marshal the data for storyline
- Get skill to quickly and easily draw plot or visualize the information through visualization technique.
- The ability to develop visualization to tell the story
- Get skill on analysis of data using visualization as a tool

Course Outcome

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Able to gain knowledge on visualization with good story line and perform job of a data analyst	PO1 (3)
CO2	Able to analyze and visualize the dataset	PO2(3)
CO4	Ability to design dashboard	PO3 (3), PO5(1)

Course content

Module-I

STORY BOARD DEVELOPMENT

The objective and flow of the story to be understood through cases

Module-II

DATA READING USING PYTHON FUNCTIONS

Python libraries: Pandas, NumPy, Plotly, Matplotlib, Seaborn, Dash

Data collection from online data sources, Web scrap, and data formats such as HTML, CSV, MS Excel, data compilation, arranging and reading data, data munging

Module-III

DATA VISUALISATION USING PYTHON LIBRARIES

Different graphs such as Scatterplot, Line chart, Histogram, Bar chart, Bubble chart, Heatmaps etc.

Dashboard Basics – Layout, Reporting, Infographics, Interactive components, live updating

Projects List

1. COVID 19
2. World Development Indicators
3. ERP dashboarding
4. Details of Social/ Empowerment schemes of Govt. etc.

Machine Learning using Python

Code	Course Title	Credit	T-P-PJ
CUTM1019	Machine Learning using Python	4	1+2+1

Objective

- Understand the meaning, purpose, scope, stages, applications, and effects of ML.
- Explore important packages of python, such as numpy, scipy, OpenCV and scikit-learn.

Course outcome

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Able to gain knowledge on ML solutions in their respective fields of study	PO1 (3)
CO2	Able to analyze several problems and apply ML techniques to solve it	PO2(3)
CO4	Ability to design prediction and classification models	PO3 (3)

Course content

Module 1 – Application and Environmental-setup (12 hrs)

- Applications of Machine Learning In different fields (Medical science, Agriculture, Automobile, mining and many more).
- Supervised vs Unsupervised Learning based on problem Definition.
- Understanding the problem and its possible solutions using IRIS datasets.
- Python libraries suitable for Machine Learning(numpy, scipy, scikit-learn, opencv)
- Environmental setup and Installation of important libraries.

Module 2 - Regression (8 hrs)

- Linear Regression
- Non-linear Regression
- Model Evaluation in Regression
- Evaluation Metrics in Regression Models
- Multiple Linear Regression
- Feature Reduction using PCA
- Implementation of regression model on IRIS datasets.

Module 3 – Classification (24 hrs)

- Defining Classification Problem with IRIS datasets.
- Mathematical formulation of K-Nearest Neighbour Algorithm for binary classification.
- Implementation of K-Nearest Neighbour Algorithm using sci-kit learn.
- Classification using Decision tree.
- Construction of decision trees based on entropy.
- Implementation of Decision Trees for Iris datasets .
- Classification using Support Vector Machines.
- SVM for Binary classification
- Regulating different functional parameters of SVM using sci-kit learn.
- SVM for multi class classification.
- Implementation of SVM using Iris datasets .
- Implementation of Model Evaluation Metrics using sci-kit learn and IRIS datasets.

Module 4 - Unsupervised Learning (12 hrs)

- Defining clustering and its application in ML .
- Mathematical formulation of K-Means Clustering.
- Defining K value and its importance in K-Means Clustering.
- Finding appropriate K value using elbow technique for a particular problem.

- Implementation of K-Means clustering for IRIS datasets
-

Projects

- To be defined based on respective study area of student.

Robotic automation with ROS and C++

Code	Course Title	Credit	T-P-PJ
CUTM1020	Robotic automation with ROS and C++	4	1+2+1

Course Objectives

- To upgrade knowledge levels of robotic application in modern industries
- Project based training

Course Outcomes

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Advanced knowledge on robotic automation	PO1 (3), PO2(2)
CO2	Design different types of circuits using devices which are connected to robotic modules	PO2(2), PO3 (2)
CO3	To write code using C++ for various types of robotic applications.	PO5 (2)
CO4	Apply the concepts in Industry based project & advanced learning.	PO5 (3)

Course Content:

Module – 1

Robotic Automation Introduction

- 1.1 Basic's of automation
- 1.2 Use of robots in industry.

Module - 2

Sensor's requirement in robots.

- 2.1 Selecting sensors as per the project.
- 2.2 Specification checking of sensors.
- 2.3 Interfacing of sensor to controllers.

Practice

P2.1 TILT, PROXIMITY, TEMPERATURE, HUMIDITY, SMOKE, FINGERPRINT

P2.2 BLUETOOTH, ESP8266, GPS, GSM

Module - 3

Controllers and output port handling.

- 3.1 Concept of 8951 controller

3.2 Concept of Arduino and concept of Raspberry Pi.

Practice

P3.1 Port handling of 8951

P3.2 Port handling of Arduino

P3.3 Port handling of Raspberry Pi

Module- 4

Sequential robot control

4.1 Designing of sequential robot control system.

4.2 Writing of programs in different programming languages.

4.3 Controlling of input/output devices.

Practice

P4.1 Programming of controllers with different programming languages

P4.2 Designing of sequential control robot.

Module- 5

ROS & C++

5.1 What is Ubuntu & ROS?

5.2 Requirement and application of ROS.

5.3 ROS based simulation of Turtlebot.

5.4 Adding of robot with wheel & sensor. Placing robot inside Gazebo.

Practice:

P5.1 Ubuntu basic command.

P5.2 Installation of Ubuntu, ROS & Gazebo

P5.3 Turtlebot control application

P5.4 Gazebo based robot control and simulation.

P5.5 Python and C++ based programming to control robot.

Virtual LAB : Using ROBOMASTER (AWS)

Projects

1. Mobile controlled robot
2. Autonomous operated robot.
3. 3. Location targeted robot

Basics of Design Thinking

Code	Course Title	Credit	T-P-PJ
CUTM1021	Basics of Design Thinking	2	0+0+2

Course Rationale:

Steve Jobs famously said “Design is just not what it looks or feels like. Design it how it works”. Design Thinking is described as a discipline where a designer's sensibility and methods match with the needs of users. It draws on logic, imagination, intuition and systematic reasoning to explore the possibilities of a solution to a challenge and to create desired outcomes that benefit the end user. So, if you are among the one who is constantly thinking of solving a problem of business or society, it is ideal for you. This course will help you with the basics of design thinking and through an action centric learning approach, lead to creatively exploring the challenges and by using the design thinking tool propose innovative solutions.

Course Objectives:

- To orient the participants with the basics of the design thinking process
- To familiarize participants with the elements of Design thinking

Course Outcomes

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	It can improve the Knowledge of imagination, intuition and systematic reasoning to explore the possibilities of a solution to a challenge and to create desired outcomes	PO1(3)
CO3	will help you with the basics of design thinking and through an action centric learning approach, lead to creatively exploring the challenges and by using the design thinking tool propose innovative problem solutions.	PO2(3), PO4(3)

Course contents:

Module: I

Basics of Design Thinking, Why Design Thinking, Design Thinking Mindset (Inspiration, Ideation and Implementation) Design thinking process, (Empathy, Define, Ideate, Prototype, Test). Cases of application of Design thinking approach (Intuit, IDEO, Infosys, IBM, Google, Apple, Jubilant Foods)

Module: II

Executing a Design Thinking Project- Apply Interviewing and empathy building technique, Drawing inferences from the observations, Defining a point of view, Ideation process, developing and testing prototypes and writing a story of a minimum viable solution.

Projects-

- Develop a customer friendly insulin pump design
- Develop a new customer experience for buying a diamond ring online
- Develop a new disease monitoring device for health workers working in remote areas.
- Designing an integrated machinery for end to end farm activities for small and marginal farmers.
- Design a Fund raising campaign

Recommended References:

System Integration with DYMOLA

Code	Course Title	Credit	T-P-PJ
CUTM1022	System Integration with DYMOLA	2	0+0+2

Course Objectives

- To provide powerful multi-disciplinary systems engineering through compatible model libraries for a large number of engineering domains.
- To design high-fidelity modeling of complex integrated systems.

- To design intuitive modeling i.e. advanced, formally defined object-oriented modeling language.
- To enable users to easily build their own components or adapt existing ones to match their unique needs.
- To provide hardware-in-the-loop simulations (HILS) i.e. real-time simulation with AurdinoUno, Python, Matlab, 3D real-time animation, CAD files import capability.
- To increase the ability to integrate with complex 3D geometry for integrated simulation.
- To increase powerful model management, calibration & optimization capabilities.

Course Outcomes

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	It can improve the Knowledge to better understand the behavior of systems and to work and communicate accurately with partners and suppliers.	PO1(3)
CO3	DYMOLA is not only capable of supporting an ad-hoc modeling level, such as functional behavior or detailed design, but is also able to convert these predictive models into real-time models.	PO2(3), PO4(3)
CO4	Future Centurions are ready for operating in many industries including automotive, aerospace, architecture, Motorsport, energy, and high tech.	PO3(3)

Course Contents

Module 1 - Introduction Dymola and Modelica library

Package Browser, Component Browser, Parameter and Variable Editor Simulation Window, Modeling, and Simulation.

The Modeling window is used to compose models and model components.

The Simulation experiment on the model, plot results and animate the behavior.

Creating user-defined models and scripting using Modelica language.

Role Play – Explore the pre-defined libraries and Models, Creating a Package

Practice Project - Preparation of animated projects

<https://www.youtube.com/watch?v=39xyI0k>

<https://www.youtube.com/watch?v=FN8LlnTwzVE&t=314s>

Module 2 – Physical Modeling using DYMOLA

Import of user-defined libraries and packages, interfacing with physical models using ArduinoUno.

The Simulation experiment on the model using multi-domain libraries such as mechanical, electrical, control, thermal, pneumatic, hydraulic, powertrain, thermodynamics, vehicle dynamics, air-conditioning domains

Dymola interface that is stored in the Python package

Role Play – Explore the pre-defined libraries and Models, Creating a Package

Practice Project - Preparation of projects using user-defined packages,

Systems Physics with Modelica/Dymola

<https://www.youtube.com/watch?v=xlpHwX-W3Ns>

Module 3 – Animation and 3D view Using DYMOLA

MultiBody Frame Connector, Building a Mechanical Model, Concept of Furuta

Role Play - Practical session by students for students

Practice Project - Modeling of animated projects using the MultiBody library.

<https://www.youtube.com/watch?v=c9Ar2b4X5rQ>

<https://www.youtube.com/watch?v=k7ILBASaEJg>

Project 1

Simulating a model – Modeling of Integrated circuits

Description: Use of Electrical and Electronics components.

Workbench Use: Behavior Modelling, Functional and Logical Design.

Project 2

Simulating a model -Creating a model for Electric DC Motor

Description: Design a DC Motor Model, Test, and Simulation, Creating a library for components, Creating a model for motor drive, Scripting.

Workbench Use: Behavior Modelling, Modelica Standard Library.

Project 3

Simulating a model -Simple Pendulum with Frictionless joint Using Multi-Body Library

Description: Design the Simple pendulum and the Furuta joint using Dymola and Modelica language. Friction joint for the Mechanical equipment.

Workbench Use: Behavior Modelling.

Project 4

Simulating a model – Pick and Place Robot

Description: 5 Axis Pick and Place Robot Design, Validation, and Optimization in the 3DS platform. Workbench Use: Behavior Modelling, Functional and Logical Design. Part design and Assembly Design.

Project 5

Simulating a model – 3D Printer Design

Description: Design All System and Sub System of the 3D Printer, Validation and Simulation using 3Ds Platform. Workbench Use: Behavior Modelling, Functional and Logical Design. Part design and Assembly Design.

Project 6

Simulating a model – Bicycle Behavior Modeling

Description: Design Power Train, Driving Cycle, part design, and Simulation.
Workbench Use: Behavior Modelling, Functional and Logical Design. Part design and Assembly Design.

Project 7

Simulating a model – Refrigerator Compartment Door Design using Thermal Library

Description: This component model the airflow through the door of a refrigerator or freezer compartment.
Workbench Use: Behavior Modelling, Functional and Logical Design. Part design and Assembly Design.

Project 8

Simulating a Model – Engine Analytic Using MultBody Library.

Description: Engine analytic, an engine with 6 cylinders, 6 planar loops, 1 degree of freedom, and analytic handling of kinematic loops.
Workbench Use: Behavior Modeling.

Project 9

Simulating a model – Control the real and Digital servo motor ArduinoUno Library

Description: Control the Real and Digital Servo motor with simulation.
Workbench Use: Behavior Modelling, Arduino based System Design, and Functional and logical design.

Project 10

Simulating a model – Virtual Universes with Poppy Humanoid Using ArduinoUno Library

Description: Virtual universes with a human assistant robot with simulation.
Workbench Use: Behavior Modelling, Arduino based System Design, Functional, and logical design.

Project 11

Simulating a model – Implementation of Model using Python Library

Description: Modeling using python library, validation and optimization in the 3Ds platform.

Workbench Use: Behavior Modelling, Functional and Logical Design. Part design and Assembly Design.

Project 12

Simulating a model – Industrial Robot Design

Description: 6 Axis industrial robot design, validation, and optimization in the 3Ds platform.

Workbench Use: Behavior Modelling, Functional and Logical Design. Part design and Assembly Design.

Project 13

simulating a model – Temperature Control System Using State Graph

Description: The model contains an electric circuit with a heating resistor and a switch.

Workbench Use: Behavior Modelling.

<https://www.youtube.com/watch?v=zz-crJOG0&t=26s>

<https://www.youtube.com/watch?v=Zl592ARjnpU>

Project 14

Simulating a model – Magnetic Ball System using Magnetic Library

Description: The electronic circuit consists of a voltage source, a resistor, and an inductor in the form of a tightly wound coil. An iron ball beneath the inductor experiences a gravitational force as well as an induced magnetic force (from the inductor) that opposes the gravitational force.

Workbench Use: Behavior Modelling.

Project 15

Simulating a Model – Design of Water to Steam Converter Using Fluid Library

Description: Create a package under Fluid_Package called Water_To_Steam using temperature sensors.

Workbench Use: Behavior Modelling.

Project 16

Simulating a Model – Design of Liquid Valve Control Using Fluid Library

Description: Building a simple circuit with two valves and a volume block.

Workbench Use: Behavior Modelling.

https://www.youtube.com/watch?v=P_Yl3RiTl14

Smart Engineering Project (G2M)

Code	Course Title	Credit	T-P-PJ
CUTM1023	Smart Engineering Project (G2M)	3	0+0+3

Course Objectives

- The main objective of this course is that students from various branches can learn different tools and collaborate together to build a smart live project.
- To make the centurion's think beyond engineering.
- To provide the platform to express the imagination to reality.
- To acculturate *the* diversity in engineering.
- To make the centurions industry ready.

Course Outcomes

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	It can improve the Knowledge to Learn the new tools and use them to solve some current problems in their respective areas.	PO1(3)
CO2	Able to learn current industry software's and work on projects based on multidisciplinary fields using different analytical skills.	PO2(3), PO4(3)
CO4	Can be able to discover engineering as a quality product outcome using different tools.	PO3(3)

Course Syllabus

- Interdisciplinary
- Product Based
- Industry 4.0
- Go to Market Based

Project categories:

- Software/Hardware Based
- Real-Time
- Multidisciplinary

Basic Project Requirements:

As per the Project requirements you can select any available boards/software.

Some selected and regular used embedded boards as listed below for your reference.

Hardware

1. Arduino (Uno, Mega, Nano)
2. Node MCU/ESp32
3. Raspberry pi Zero W/Raspberry pi Pico
4. Micro Python
5. Raspberry pi 3b+
6. FPGA Board
7. STM32

Simulation Software's

Some selected and regular used software as listed below for your reference.

1. Proteus Professional
2. MATLAB/Simulink
3. LabVIEW
4. Xilinx ISE
5. Ansys
6. Fusion 360
7. Autodesk

8. Dymola
9. Simulia
10. Maplesoft
11. Modelica
12. Python

Projects In Track:

- Analysis Design of G+10 Building using STAAD Pro
- Automated water irrigation controller for rice field
- Automatic Microgrid System
- Automation in Light and Fan in Classroom
- Speed Control Control Of Dc Motor using Arduino
- Bench Tapping Machine
- Modular E-Rikshaw Design using Catia
- Renewable Energy using Compressor
- Wireless Control Robotic car through MATLAB GUI
- Water Level and Temperature Indicator
- Speech Recognition using Python
- IOT Based Air Pollution Quality Monitoring with ESP8266
- Plant Disease Detection using Image Processing
- IOT Based Air Quality and Monitoring By Using Arduino
- Automatic agriculture field monitoring device
- IOT Based Weather Station Using GY-BME280 Sensor Module and ESP8266-12E Node MCU LUA Wi-Fi Module
- Bluetooth Controlled Car Using ARDUINO
- Crimes Against Women in India
- A Presentation on Analysis of QUAD COPTER
- Collecting Data and Visualizing of a Mobile Sensors of Android Device
- Manufacturing of Knurler Tool
- Smart Product Sanitization and Packaging System

Product in Track

- Insulin Pump Prototype Design
- Electronic Controller Design
- Battery Management System Design
- Poly House

- Apparel Tracking using Apriso webservice
- Android app development using android studio and Java
- Modular E-Rickshaw variant Design
- Autonomous Navigating Vehicle
- Smart Transformer Control Panel Design
- 3-Phase BLDC Motor Driver Design

Syllabus

Geotechnical Engineering

Code	Course Title	Credit	T-P-PJ
CUTM1073	Geotechnical Engineering	3	1+1+1

Objective

- Perform Moisture content, Specific gravity, Atterberg limits tests.
- Perform Grain size distribution, Proctor tests.
- Perform Unconfined compression, Triaxial tests.
- Perform California Bearing Ratio, Vane Shear tests.
- Perform Sand replacement, Core cutter, Permeability tests.

Course outcome

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Understand the fundamental engineering knowledge of soil mechanics, including the nature and behavior of soil, soil classification, and compaction investigation for low quality soil.	PO1 [3], PO4 [2]
CO2	Able to analyze the geo-environmental problem and be able to think of its solution related to soil.	PO2 [3]
CO3	Able to design the foundation considering the environment.	PO3 [3], PO7 [1]
CO4	Able to do the soil-structure interaction design and also able to analyze the geotechnical structures STAAD-PRO	PO5 [2]

Course Content

Module 1: INTRODUCTION

(5hrs)

Soil formation - soil structure and clay mineralogy - Adsorbed water - Mass- volume relationship - Relative density.

Grain size analysis - Sieve and Hydrometer methods - Consistency Limits and Indices - I.S.

Classification of soils

Practice Sessions:

1. Determination of water content of soil (1hrs)
2. Determination of specific gravity of soil (1hrs)
3. Grain size analysis by sieving (Dry sieve analysis) (1hrs)

Module 2: PERMEABILITY & SEEPAGE THROUGH SOILS

(6 hrs)

Soil water - capillary rise - flow of water through soils - Darcy's law- permeability - Factors affecting - Determination of coefficient of permeability - Permeability of layered systems.

Total, neutral and effective stresses - quick sand condition - Seepage through soils - Flow nets: Characteristics and Uses (Basic appraisal only).

Practice Sessions:

4. Determination of Atterberg limits of soil: (a) liquid limit, (b) plastic limit, (c) shrinkage limit (2 hrs).
5. Measurement of unit weight of soil in the field: (a) Core cutter method, (b) Sand replacement method (2 hrs).

Module 3: COMPACTION & CONSOLIDATION

(5hrs)

Mechanism of compaction - factors affecting - effects of compaction on soil properties. Field compaction Equipment - compaction control.

Stress history of clay; e-p and e-log p curves - magnitude and rate of 1-D consolidation- Terzaghi's Theory.

Practice Sessions:

6. Determination of field density by sand replacement method. (1hrs)
7. Determination of consolidation properties of soils. (1:15mins)
8. Determination of unconfined compressive strength of soil (1:15mins)

Module 4: SHEAR STRENGTH & STRESS DISTRIBUTION OF SOILS (6hrs)

Mohr - Coulomb Failure theories, Normal and shear stresses on a plane, Boussinesq's solution.

Project: (3:30 hrs)

Types of shear strength test to be delivered as project mode, rest of the topics to be dealt in classroom teaching mode, Mathematical Derivations to be limited to classroom activity. They should not be a part of External Evaluation.

Module 5: DESIGN OF SHALLOW & DEEP FOUNDATIONS (7hrs)

Introduction, Different types of shallow foundations, Different types of deep foundations, Design methodology for piles.

Practice Sessions:

9 California bearing ratio test (1hrs)

Project: (5hrs)

Design calculation of shallow foundation to be done in project mode using STAAD Pro software. Design calculation of pile capacity, Analysis of pile group, Settlement of pile group, Concept of negative skin friction, Piles subjected to lateral loads, Pile load test, Design and construction of well foundation. Design of cantilever sheet piles and anchor sheet piles to be done in practice mode as well as project mode using STAAD Pro software.

Module 6: FOUNDATIONS IN DIFFICULT GROUNDS (4:30 hrs)

Introduction, Techniques of ground improvement, Foundations in swelling soil, Foundations in collapsible soil, Use of soil reinforcement, machine foundations, Free and forced vibration, Lysmer's method, dynamically loaded foundations, Dynamic soil properties, Vibration isolation.

BASIC APPRAISAL ONLY.NO NUMERICAL PROBLEMS

Practice Session:

10 Determination of shear parameters by Direct shear test (1:30hrs)

11 Determination of compaction properties by standard proctor test. (1hrs)

12 Determination of shear parameters by Tri-axial test. (1hrs)

Module 7: EARTH PRESSURE & RETAINING STRUCTURES (2hrs)

Types of Earth pressure. Rankine's Active and passive earth pressure, Smooth Vertical wall with horizontal backfill. Extension to Soil, Coulombs wedge theory, Different types of retaining structures

E Books:

Jain A K and Jain A K. 2005. Soil Mechanics and Foundations. Laxmi Publications (P) Ltd. New Delhi.

Ranjan Gopal and Rao A S R. 1993. Basic and Applied Soil Mechanics. Welley Easters Ltd., New Delhi.

Singh Alam. 1994. Soil Engineering Vol. I. CBS Publishers and Distributions, Delhi.

Structural Detailing and Drawing

Code	Course Title	Credit	T-P-PJ
CUTM1061	Structural Detailing and Drawing	2	0+2+0

Objective

- To introduce the students to basic theory and concepts of Structural Drawing, STAAD Pro and the classical methods for the analysis of building drawings.
- On completion of this course the students will be able to know the process of making sketches, types of projections, designing of beam, columns and shear walls.

Course outcome

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Understand the principles of structural detailing and the relationship between design and detailing.	PO1 [3], PO3 [2]
CO4	Able to solve industry structural elements problems using standard software and techniques.	PO2 [2], PO5[3], PO12[2]

Course Content

MODULE 1: INTRODUCTION OF ENGINEERING DRAWING

(02 hrs)

Setting of paper size, drawing of title block with border line - Drawing of Types of line, their properties, and arrow head - Types of scale, dimensioning rules & their uses.

MODULE 2: ORTHOGRAPHIC AND ISOMETRIC PROJECTION (04 hrs)

Concept of projection - Types of projection and applying symbol of projection - Isometric scale - Isometric view.

MODULE 3: SECTIONING (04 hrs)

Types of section – Application - View positioning - steel structure - PEB structure & Steel structure work - Syphon, culvert & bridge design - Stair, door & ventilator design and calculation.

MODULE 4: INTRODUCTION OF STAAD Pro (02 hrs)

Introduction to structural design & analysis, brief introduction about RCC structure - Doing frame structure - Calculating coordinate points, properties of building.

MODULE 5: PLANE & SPACE FRAME STRUCTURE (03 hrs)

Load, types & uses of load, calculation of dead load, live load & floor load - Working with design and analysis of building &, steel structure, preparation of RCC report - Applying load (wind load, seismic load, floor load, live load, dead load) using by water tank, tower, truss & multi stored building.

MODULE 6: DESIGN OF BEAM AND COLUMN (02 hrs)

Design of beam and column, file transfer, concrete design, steel design, slab design, shear force, bending moment, solve some error - Using I.S code to define concrete design, steel & transfer to file from AutoCAD to STAAD PRO through DXF file.

MODULE 7: SHEAR WALL DESIGN (03 hrs)

Describe about Shear wall design, & foundation - Using surface panel models to design shear wall (RC walls) & lift rooms, using STAAD -foundation to design, pile, mat, and isolated, combined footings - bridge deck design & stair case design - Response spectrum & foundation design foundation design.

Quantity Estimation & Costing

Code	Course Title	Credit	T-P-PJ
CUTM1063	Quantity Estimation & Costing	3	2+1+0

Objective

- To make familiar with calculation of quantities for different item of works & provide knowledge about estimation of buildings through Estimator-2.0 software
- On completion of this course the students will be able to know the process of making animation of buildings, sketch up of building plans and building models.

Course outcome

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)

CO1	Understand and apply various methods of quantity estimation and measurement in construction projects.	PO1 [3]
CO2	Able to analyze and evaluate the costs and risks associated with different construction methods and materials through estimator 2.0	PO2[3], PO5 [1]

Course Content

MODULE 1: BUILDING

(2 Hrs)

Reading of Plans, Sections and detailed Drawings Related to buildings; preparation of Quantities and Units. Introduction of estimating & different types of estimates - Requirements for building estimate purpose of estimate - Plinth area estimate, cube rate estimate, annual estimate & maintenance estimate - Brick calculation & cost for different material - No. of brick required for area, weight of bricks, different bricks densities.

Practice Sessions:

1. Study of construction drawings and preparation of WBS. (01 Hr)
2. Detailed estimates for a Shopping Complex using Estimator-2.0 software. (01 Hr)
3. Detailed estimates for a hostel Building using Estimator-2.0 software. (01 Hr)
4. Detailed estimates for a hospital using Estimator-2.0 software. (01 Hr)

MODULE 2: CULVERT

(2 Hrs)

Estimations and Quantity Surveying: Reading of Plans, Sections and detailed Drawings Related to irrigation structures; preparation of Quantities and Units.

5. Detailed estimates for a Slab culvert with right angled/ Splayed wing wall. (01 Hr)
6. Detailed estimates (Manual) for a box culvert. (01 Hr)
7. Detailed estimates (Manual) for a Hume pipe Culvert. (01 Hr)

MODULE 3: ROAD

(2 Hrs)

Estimations and Quantity Surveying: Reading of Plans, Sections and detailed Drawings Related

to Roads structures; preparation of Quantities and Units.

8. Detailed estimates (Manual) for a road. (01 Hr)

MODULE 4: SLOPED ROOF

(2 Hrs)

Estimations and Quantity Surveying: Reading of Plans, Sections and detailed Drawings Related to Sloping roof/Roof truss structures; preparation of Quantities and Units.

9. Detailed estimate (Manual) for a timber roof truss. (01 Hr)
10. Detailed estimate (Manual) for a roof cover of GI sheets. (01 Hr)

MODULE 5: QUANTITY SURVEY

(2 hrs)

Estimations and Quantity Surveying; Preparation of Quantity of materials per unit rate of work; Estimating labor.

11. Quantity of materials required for different items of works in buildings (Manual). (01 Hr)
12. Quantity of different types of labor required for different items of works (Manual). (01 Hr)

MODULE 6: RATE ANALYSIS OF BUILDING

(2 hrs)

Specifications; Rate Analysis as per State Govt. and CPWD Standards.

13. Development of Excel Sheet for Rates, Specifications and Cost Estimates. (01 Hr)
14. Rate Analysis and Cost Estimates for a Shopping Complex using Estimator-2.0 software. (1 Hr.)
15. Rate Analysis and Cost Estimates for a hostel Building and a hospital. (01 Hr)

MODULE 7: RATE ANALYSIS OF CULVERT & ROAD

(2 Hrs)

Specifications; Rate Analysis as per State Govt. and CPWD Standards

16. Rate Analysis and Cost Estimates for a Slab culvert with right angled wing wall using Estimator-2.0 software. (01 Hr)
17. Rate Analysis and Cost Estimates for an arch culvert. (01 Hr)

18. Rate Analysis and Cost Estimates for a road. (01 Hr)

MODULE 8: PROJECT PREPARATION

(2 Hrs)

19. Road section C & L-section. (01 Hr)
20. Report of detailed estimation with hard copy. (01 Hr)

Text Books

1. B.N Dutta 'Estimating and Costing in Civil Engineering', UBS Publishers & Distributors (P) Ltd, 2010.

Geometric Modeling

Code	Course Title	Credit	T-P-PJ
CUTM1060	Geometric Modeling	3	0+3+0

Objective

- To introduce the students to basic theory and concepts of AutoCad, Revit and the classical methods for the analysis of building drawings.
- On completion of this course the students will be able to know the process of making sketches, dimensions, 3D Modeling and rendering.

Course outcome

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Able to use CAD in Civil structure, basic knowledge of operating software & commands, and benefit of civil developments in the construction industry. Do 2D & 3D drafting /design with various software.	PO1 [2], PO5[3]
CO4	Able to do the architectural modeling design and also can understand how to solve the complex design problems.	PO3 [3], PO4 [2]

Course content

MODULE 1: 2D SKETCHES AND DIMENSIONING

(4Hrs)

1. Study for Drafting and Modeling – Coordinate systems (absolute, relative, polar). (1 Hr)
2. Drawing of a Section for a duplex building. (1 Hr)
3. Drawing of an elevation for a duplex building with dimensions. (2 Hrs)

MODULE 2: 3D SKETCHES AND PROJECTION OF DUPLEX (3 Hrs)

4. Drawing of front view and top view of simple solids like prism, pyramid, cylinder, cone, etc, and dimensioning. (1 Hr)
5. Drawing front view, top view and side view of objects and projection of duplex building (2 Hrs)

MODULE 3: BUILDING PLAN AND TRUSS (4 Hrs)

6. Drawing of a plan of residential building (Two bed rooms, kitchen, hall, etc.) (2 Hrs)
7. Drawing of a simple steel truss. (1 Hr)
8. Drawing sectional views of prism, pyramid, cylinder, cone, etc, (1 Hr)

MODULE 4: INTRODUCTION OF REVIT ARCHITECTURE (3 Hrs)

9. Installing Autodesk Revit architecture and understanding the user interface. (1 Hr)
10. Creation of plan for a project by using level and sketching elements. (2 Hrs)

MODULE 5: 3D MODELING WITH RIVET (7 Hrs)

11. Drawing isometric projection of simple objects. (1 Hr)
12. Creation of 3-D models of simple objects and obtaining 2-D multiview drawings from 3-D model. (2 Hrs)
13. Creation of 3d syphon, 3d canal fall, 3d water tank, 3d of trusts & 3d of foot over bridge. (2 Hrs)
14. Assembly drawing & attribute text - Annotation, block & w-block & leader. (2 Hrs)

MODULE 6: WORKING WITH PROJECT AND WORK PLANES (4 Hrs)

15. Working with basic building components, site design and massing studies. (2 Hrs)
16. Setting color for wall, about sectioning libraries, basic knowledge of building. (2 Hrs)

MODULE 7: ANNOTATION AND DETAILING AND RENDERING (4 Hrs)

17. Creating text notes, grids, and levels. (1 Hr)
18. Working with label and detailing. (1 Hr)
19. Understanding the rendering workflow, using lights, and creating a lighting fixture. (1 Hr)
20. Displaying a light source in a view, controlling the position of a spotlight in a building model & adding plants and entourage. (2 Hr)

Hydrology and Irrigation

Code	Course Title	Credit	T-P-PJ
CUTM2372	Hydrology and Irrigation	3	2+1+0

Course objective

- To study the basic principles and movement of groundwater and properties of ground water flow.
- To study the watershed characters and applications.
- To study the ground water resources mapping and surface water resources mapping.
- To study the hydrological disaster and role of earth observation technology.

Course outcome

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	An ability to manipulate hydrological data and	PO1[3]

	undertake widely used data analysis.	
CO2	Apply various statistical methods for hydrological analysis. Understanding and analysis of channel, flood routing and groundwater hydrology	PO2[3], PO3[3]
CO4	Project oriented skills shall be gained by students to work efficiently in survey, planning, design and construction in the irrigation sector using tools.	PO4[3],PO5[2]

MODULE I: INTRODUCTION

(2 hrs+1hrs)

Hydrological cycle, Types of Rainfall, Precipitation - measurement - average precipitation over a basin, evaporation, transpiration, infiltration - Infiltration indices. Runoff -Overland flow, Types of aquifers.

Practice Session: (1hr)

1. Determination of infiltration capacity using double ring infiltrometer.

MODULE II: HYDROGRAPH

(3hr+2hr)

Direct runoff, Base flow, separation of base flow- Hydrograph, Unit hydrograph - Assumptions of Unit hydrograph, derivation of unit hydrograph from direct runoff hydrograph, Computation of direct runoff hydrograph for different storms using unit hydrograph theory.

Practice Session:(2hr)

2. Construction of double mass curve using Python. 1hr
3. Hydrograph analysis using Python. 1hr

MODULE III: FLOOD MANAGEMENT

(1hr+2hr)

Floods- type and causes of occurrence, flood classification- probable maximum flood, standard project flood, design flood, Flood forecasting, Flood routing-channel routing, Flood protections.

Practice Session:(2 hr)

- 4.Determination of flood stage-discharge relationship in a watershed using python. 1hr
- 5.Determination of flood peak-area relationships using python. 1hr

MODULE IV: GROUND WATER HYDROLOGY

(1hr+2hr)

Ground water flow: Specific yield, storage coefficient, coefficient of permeability, confined and unconfined aquifers, types of aquifers, radial flow into a well under confined and unconfined conditions (only steady state conditions), Yield of a well, Borewell.

Practice Session:(2hr)

6.Exploration of Ground water using Electrical Resistivity Method.2hr

MODULE V: HYDROPOWER ENGINEERING (2hr+4hr)

Dams and their causes of failure, economical height of dam, planning of water resources projects, Reservoir Planning: Storage capacity of reservoirs, Yield from reservoir, Reservoir losses, reservoir sedimentation.

Practice Session:(4 hr)

7.Design of Stability analysis of gravity dam. 2hr

8.Various cases of Failure of concrete gravity dam.2hr

MODULE VI: IRRIGATION ENGINEERING (1hr+2hr)

Water requirements of crops, consumptive use, quality of water for irrigation, irrigation methods and their efficiencies.

Practice Session: (2hr)

9.Numerical analysis of Irrigation Parameters (Duty, Base Period, Delta and Efficiencies).2hr

MODULE VII: CANAL IRRIGATION (3hr+5hr)

Classification of canals, Canal losses, Alignment of main and distributary canals, most efficient section, Cross section of irrigation canals, water logging - causes and control.

Practice Session:(3hr)

10 Design of irrigation canal using Kennedy's and Lacey's theory. 2 hr

11 Design of lined canal. 1hr

12 Design of head regulators and cross regulators. 2hr

13. Field visits for various irrigation structures.

E Books:

1. Todd D.K., (2000) Ground Water Hydrology, John Wiley and Sons,
2. K., subramanya (2008) Engineering Hydrology, Tata McGraw-Hill Publishing Company Limited.

3. Ahmadi, A., Akhbari., M., and Karamouz, M (2011) Groundwater Hydrology: Engineering, Planning and Management, CRC Press.
4. Saeid Eslamian (2014) Handbook of Engineering Hydrology: Environmental hydrology and water management, CRC Press.
5. Malcolm. G. Anderson and Jeffrey J Mc Donnell (2005) Encyclopedia of hydrological Science, J Wiley.

Concrete Technology

Code	Course Title	Credit	T-P-PJ
CUTM1066	Concrete Technology	3	1+2+0

Course objective

- To determine the correct proportion of cement, sand and aggregate ratio for the concrete.
- To perform tests for cement, sand and aggregate and concrete.
- To supervise and monitor concrete casing and casting for building construction.

Course outcome

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Understand the various types of cement, aggregates, and admixtures used in concrete, and their effects on concrete properties.	PO1[3]
CO2	Understand the principles of concrete mix design and be able to develop new concrete mix.	PO2[2] , PO3[3]
CO4	Understand the methods of testing using modern tools and be able to fix sustainable concrete.	PO5[3], PO7 [2]

COURSE SYLLABUS

MODULE 1: AGGREGATE/SAND

(5hrs)

Aggregate, classification (IS: 383), Grading, Characteristics (grading, fineness modulus), Bulking of fine aggregate, Deleterious substances, factors affecting the strength of concrete. Water, water quality, water requirement for hydration & workability, the effect of impurities present in water, Admixture, the meaning of terms, functions, classification, waterproofing and permeability reducing admixture. Construction Chemicals, Interpretation of specifications manufactures, Meaning of terms, functions, Classification (IS : 4082), waterproofing and permeability reducing admixture.

Practice Session:

1. Perform sieve analysis on aggregate and determine to grade. (01 hrs)
2. Determine the presence of silt and clay and Perform a test to determine bulking of sand. (01 hrs)
3. Specific Gravity, Water Absorption and Natural Course of Fine & Coarse Aggregate. (1hr)
4. Aggregate Impact Test, Aggregate Crushing Test (1hr)

MODULE 2: PREPARATION OF CEMENT CONCRETE

(3hrs)

Preparation of concrete Methods used, merits and demerits of methods, tools and equipment used and precautions to be taken for the following processes, batching, mixing, transportation, placing, compaction, curing, finishing, strength & durability requirements (IS : 456 - 2000), stripping of formwork, application of modern power tools, classification & specifications of concrete, classification of concrete according to grade, weight & methods of mixing ready mixed concrete, self-levelling concrete.

Practice Session:

5. Prepare concrete and lay at required places using power tools, (2hrs)

MODULE 3: WORKABILITY OF CONCRETE

(4 hrs)

Introduction to concrete, properties, workability of concrete (1 hr)

Practice Session:

6. Workability of Fresh Concrete by (3hr)
 - (a) Slump cone method
 - (b) Compaction factor

(c) Flow table methods.

MODULE 4: STRENGTH OF CONCRETE

(7hrs)

Nominal mixed and design mixed concrete, properties of concrete- workability & consistency, segregation, bleeding, strength, durability, impermeability, volume, stability, R.C.C. members for foundation, beams, columns, slabs, retaining wall etc. Scaffolding & formwork - Definitions of common technical terms used in Scaffolding, formwork. Types & applications Different materials used in formwork. Methods and tools used for formwork. Safety precautions to be observed in scaffolding and formwork Defects in formwork Shuttering /removal of formwork. Maintenance & repair of formwork Plain cement concrete (PCC) & Reinforced cement concrete. Properties of PCC & RCC in the green state and hardened state Importance of formwork and reinforcement in construction.

Practice Session:

7.Compressive strength of concrete (2hr)

(a) Cube Specimen

(b) Cylinder Specimen

8.Splitting tensile strength of cylinder. (2hr)

MODULE 5: DESIGN-MIX CONCRETE

(5 Hrs.)

Principles of mix proportioning, probabilistic parameters, factors governing selection of mix. Road note - 4, DOE, ACI and IS method of concrete mix design, Variability of test results, acceptance criteria, various IS code provisions.

Practice:

9.Preparation of design-mix concrete (2hr)

10.Concrete shotcreting (1hr)

11.Pressure grouting of concrete (1hr)

MODULE 6: REINFORCEMENT IN CONCRETE

(5 Hrs)

Theory:

Structural elements & characteristics (simply supported, continuous, fixed, cantilever, overhang), the importance of the use of reinforcement in concrete, tools used in bar bending correct use of tools, different operation in bar bending (straightening of bars, cutting of bars, bending of bars, placing of bars, binding of bars, fixing of cover blocks). (1hr)

Practice:

12. Making of shuttering & supports with uprights and wedges for Arches, Lintels and Lintels with Chajjahs. (2hrs)

13. Cutting, bending & placing of reinforcement. (2hrs)

MODULE 7: SPECIAL CONCRETING TECHNIQUES (7hrs)

Theory:

Review of behavior and characteristics of high strength concrete, high performance concrete, fiber reinforced concrete, mass concrete, lightweight and heavyweight concrete, Precast concrete. Pumped concrete, concrete, underwater concrete, pre-placed concrete, vacuum dewatered concrete, hot and cold weather concreting, Ready mixed concrete. (3hr)

Practice:

14. Preparation of Lightweight concrete mix. (1hr)

15. Preparation of Fiber reinforced concrete. (1hr)

16. Preparation of concrete with solid wastes. (1hr)

17. Reactive Powder Concrete design. (1hr)

Electrical, Plumbing and Wood Works

Code	Course Title	Credit	T-P-PJ
CUTM1065	Electrical, Plumbing and Wood Works	3	1+2+0

Course objective

- To understand the installation for electrical systems in a building.
- To study carpentry work in the building, installation of doors, windows, etc.
- To understand and demonstrate installation of plumbing systems in the building.

Course outcomes

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Understand the principles of plumbing systems, electrical wiring and wood works in building with safety .	PO1[3], PO6 [1]
CO2	Understand and apply the analysis the energy efficiency and sustainability in electrical and plumbing systems.	PO2[2], PO7 [3]
CO3	Able to solve the cost effectiveness problem in design and installation, maintenance and repair of electrical, plumbing and wood works systems.	PO3[2], PO4[2]

Course Syllabus

MODULE 1: CARPENTRY TOOLS

(5 hrs)

Defects in timber, diseases of timber, knots, shakes, grains, etc. Carpentry hand tools, measuring tools and uses. Work holding devices, power tools, viz. saws, drills, etc. Description of Carpentry Joinery, Planing, Moulding, Rebating, Chamfering, Sawing, Etc. Type of different planes and their proper uses in woodwork. Description, function and its size setting, knowledge of sharpening and uses, etc. knowledge of using marking gauges. Important instruments are necessary for checking flatness and twistness of the surface. Sharpening and grinding angle of the cutter. (2hr)

Practice Session:

Identify different wooden sample pieces i.e.- softwood & hardwood, wooden grains, etc. & their applications Annual ring, knots, shakes & chicks, etc.). Demonstrate the application of hand tools, measuring tools, and work holding devices. Demonstrate the use of different power tools, viz. saws, drills, etc. Perform sawing, planning, Moulding, Rebating, Chamfering, etc. using different types of saws, and plains. Sharpen and set different type saw blades and planer blades/ cutters. (2hrs)

Planning face, face edge, etc. Demonstrate the use of marking, mortise gauge, etc. Test the accuracy of flatness and twist-ness of the surface by using a try square. Demonstrate the use of

winding strips, cross planning, edge planning. Demonstrate a portable power planer machine and its function. (2 hrs)

MODULE 2: WOODWORK (5 hrs)

Portable power planer - useful in modern woodwork and new technology design. Description of different types of joints. Uses of joint:- Framing joint angle joint and lengthening joint, housing joint, broadening joint, etc. Wood products - Industrial forms of timber - Veneer - Laminated sheet - Fibreboard - Hardboard - Plywood, Calculation of timber required for Wall Bracket. List the sequence of operations of the job. Doors –Parts, Location, standard sizes, types. Windows-types. Ventilators-purpose-types. (2hr)

Practice Session:

Make framing joint - Mortise and tenon Joint (Single and double, Plain hunched Mitre corner,)
Make Housing joints - Full housing, Bridle, Stopped housing. Make broadening joints - Simple butt joint, Riveted butt joint, etc. Lengthening joints: End half-lap joint, End overlap joint, End bends lap joint, slopping scarf, racking scared, half lapping scarf, table scarf joint, etc. (2hrs)

Make a joint on the hardwood to make a small frame. Stopped the Tenon & Mortise joint on the hardwood in the frame to set themselves. Make shelves by six pieces of hardwood with a single lapped half-lap dovetail joint with frame (two nos. of selves). (2hrs)

MODULE 3: ELECTRICAL TOOLS AND WIRING (7hr)

Electrical Wiring:- Safety precaution and elementary first aid. Artificial respiration and treatment of electrical shock. Elementary electricity and its units. General ideas of the supply system. Wireman's tools kit. Wiring materials. Electrical fittings. System of wirings. Wiring installation for domestic lightings. Conductor, insulator, semiconductor, cable joints, measurement of cable. Types of Fuses, MCB soldering, ELCB, RCCB, ABCB, MCCB AC and DC, AC fundamentals, polyphase types of electrical wiring Different Electrical wiring accessories, ISI rules of wiring Illumination. Earthing, types of earthing Earthing Pit. (1hr)

Practice Session:

Prepare terminations of cable ends. Practice on skinning, twisting, and crimping. Identify various types of cables and measure conductor size using SWG and micrometer. (1hrs)

Make a simple twist, married, Tee, and western union joints. Make Britannia straight, Britannia Tee, and rat tail joints. Practice in Soldering of joints/lugs. (1hrs)

Demonstrate different electrical wiring systems with fixing of different accessories. Make electrical Fuse joints, fixing MCB.(2hrs)

MODULE 4: ELECTRICAL APPLIANCES (7hrs)

Different electrical appliances, accessories, Voltmeter. Estimation and costing of wiring. Explanation and working of different types of transformers and their classification. (1hr)

Practice Session:

Connect lamps with switches. Staircase circuit wiring. (1hrs)

Install earthing in different positions. Install and connect electrical appliances and take a reading with Voltmeter. Prepare materials list and cost of wiring. (1 hrs)

Identify transformer, test and use. (1hrs)

MODULE 5: PLUMBING TOOLS (7hrs)

Plumbing tools, materials used in plumbing, Different types of pipes, fittings and Joints - GI, PVC, AC, SW, CI, lead, steel - Properties and use in plumbing work. Method of cutting and joining of pipes. Drills - types and uses. Tap and Dies - types and uses, calculation of Tap drill size. (2hr)

Practice Session:

Perform a Simple pipe connection using G.I. Pipes, socket, elbow, tee, reducing elbow, G.I. union, cap plug, reducer, Three face elbow, reducing socket, plug, G.I. nipple, etc. (2hrs).

Perform Joining of pipe with – thread joint, lead joint, flange joint, cement joint, D. Joint, etc. (1 hrs)

MODULE 6: PLUMBING PIPE FITTING (7hrs)

Sanitary Technical terms - sewer, sewage, sullage, etc. -Soil pipe and waste pipe fitting Different types of water closets Different types of urinal port Kitchen sinks, Bathtub, Washbasin. Water meter, installation of the water meter. Removal of airlock Purification of water Mineral matter, Hardness, Causes of Scale formation & their Removal. (1hr)

Practice Session:

Perform Joining of pipe with Elbow joint, socket joint, Tee joint, reducing elbow joint, floor trap joint, etc. (1 hrs)

The layout of soil pipe and waste pipe to the sanitary fitting using different types of fitting viz. Door junction, door Bend, H.R. bend, Plain Bend, Double door junction, inverter junction, cowl , floor trap, Gully trap, P-trap etc. (2 hrs)

Fitting of I.W.C with a high-level cistern. Fitting of the washbasin. Fitting of E.W.C. with a low-level cistern. Fitting a kitchen sink. Fitting of the bathtub. Fitting a urinal pot with an auto cistern. (2hrs)

Module 7: Installations (5 hrs)

Water Purification: Treatment plants for different groundwater contaminants, Treatment plants for surface water. Types of damages in taps, valves, water meter, and tanks - Method of rectification Water supply - Sources of water Storage of water Distribution of water Different types of valves used in Plumbing, Types of tanks R.C.C., P.V.C. Iron tanks etc. (1 hrs)

Practice Session:

Install a water meter. Remove the airlock. Determination of pH-by-pH meter. (1 hrs)

Recondition taps, valves & flushing tank, test for correct functioning. Prepare a water supply pipeline system in residential buildings using different types of valves, fittings, and appliances. (1 hrs)

Reference NSQF Level 5

Design of Structures

Code	Course Title	Credit	T-P-PJ
CUTM2374	Design of Structures	4	2+2+0

Course objective

- To teach the basic theoretical aspects and contemporary issues in the design and fabrication of reinforced concrete members

- To teach the basic fundamental behavior of different sections, bolts, members of steel structure used in construction.
- To analyze and Design of Concrete Structures and Pre-Engineered Building (PEB) by using Software ETABS

Course outcomes

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Gain the knowledge of RCC design calculation with relevant Indian Standards.	PO1[1], PO3[2]
CO4	Able to analyse Pre-Engineered calculation with relevant Indian Standards for complex structure.	PO2 [3], PO4[1]
CO2	Understand how to convert client's requirements to structural drawing by using ETABS in an environmental friendly and sustainable way.	PO5[3], PO7 [2]

Course Syllabus

MODULE 1: BUILDING STRUCTURAL FRAME

(9 Hrs):

Introduction to Reinforced Concrete, Mechanical Properties of Concrete, Flexural Analysis, Combined Flexure and Axial Load, Shear analysis. Limit State Method using Indian Standard Codes.

Practice Session:

1. Draw grids, Reference planes and joints, create new project models and introduction of the layout. (2hr)
2. Draw building structural frame and define material properties (4hrs)

MODULE 2: LOAD DEFINITION TO BUILDING FRAME

(5 Hrs):

Modeling of Building, Load Calculations, Seismic weight, Base shear, Storey shear, Mass source, diaphragm, Meshing of Slab.

Practice Session:

3. Building structural frame- Define Properties, Material, Section, Mass source, Load pattern, load combinations
4. Define Section Properties + Section Property Modifiers (1hr)
5. Load Pattern (Gravity Loads + Earthquake (seismic) Loads (0.5hr)
6. Wind Loads, Dead loads, super dead loads and live loads introductory(0.5hr)
7. Define Load combination (Manual + Auto) (0.5hr)
8. Meshing for Slabs, Walls, beams and Columns (0.5 hr)
9. Assign Loads to structure as per IS Codes (0.5)
10. Define Mass Source (For Lateral analysis (0.5 hr)

MODULE 3:

DESIGN OF BEAMS, COLUMNS AND SLABS ACCORDING TO IS CODES (10 Hrs)

Application of limit state method to rectangular beams for flexure, shear, bond and torsion,

11. Design of doubly reinforced beams, design of T and L beams, [manually as well as in ETAB software]
12. Design of one way and two-way slabs. [manually as well as in ETAB software]
13. Design of short and long columns with axial and eccentric loadings, [manually as well as in ETAB software]

MODULE 4: REINFORCEMENT DETAILING AND SCHEDULING (6 Hrs):

Reference of IS codes IS SP 34-1987 (Theory) (1hr)

IS 13920-1993 Ductile Detailing of RC structures (Theory) (1 hr)

Practice Session:

14. Detailing of Beams, Columns and slabs using Autocad (4hr)

MODULE 5: DESIGN OF FOUNDATIONS USING SAFE FOUNDATION (6 Hrs):

Introduction to SAFE foundation, familiarizing tools used in SAFE foundation. Types of foundations introduction, isolated footing design, combined footing design and mat foundation design.

Practice Session:

15. Importing ETABS model file into the SAFE foundation software (0.5 hr)
16. design of isolated footing (1 hr)

17. design of combined footing (1 hr)

18. design of mat foundation (1 hr)

MODULE 6: MATERIALS AND SPECIFICATIONS OF STEEL/ PRE-ENGINEERED BUILDING (PEB) STRUCTURES (6 Hrs):

PRE-ENGINEERED BUILDING COMPONENTS: Primary System: Main frames, Gable End Frame - Secondary frame system: Sizes and Properties of Purlins & Girts – Bracing System: Rod, angle, Portal, Pipe bracing – Sheeting and Cladding: Roof Sheeting and Wall sheeting – Accessories: Turbo Ventilators, Ridge vents, Sky Lights, Louvers, Insulation, Stair cases.

Practice Session:

19. DESIGN LOADS ON PRE-ENGINEERED BUILDINGS. Design of PEB frame under the influence of Dead, Live, Collateral, Wind, Seismic and Other applicable Loads. Serviceability Limits as per code IS:800. (4hrs)

MODULE 7: PEB DESIGN METHODOLOGY (8 Hrs):

Practice Session:

20. Design Parameters of PEB Frames - Depth of the section, Depth to Flange width ratios, Thickness of Flange to thickness of Web ratio. d/t_w , b_f/t_f ratios of sections as per IS code. Section Sizes as per Manufacturing Limitations. Analysis and Design of Rigid Frames. Rigid Frame Moment Connection, Shear Connection- Anchor bolt and base plate design (Pinned and Fixed). (8hrs)

Text Books:

1. Reinforced Concrete design-S. N. Sinha. Tata McGraw-Hill, New Delhi
2. S K Duggal, "Design of steel structures", 2012.
3. S. Ramamurtham and R. Narayan, "Design of steel structures", 2014

Reference:

1. PEB design using ETABS
2. Etabs Full - Video

Construction Materials

Code	Course Title	Credit	T-P-PJ
CUTM2368	Construction Materials	2	0+2+0

Course objective

- To introduce students to various materials commonly used in civil engineering construction and their properties.

Course outcomes

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Able to learn basic theory about the conventional and sustainable building construction materials.	PO1[3], PO7[2]
CO2	Able to analyze the right materials choice through field investigation.	PO2[2], PO4[2]
CO5	Understand how to quantify the good construction material properties using modernize tools.	PO5[2]

Course Syllabus

MODULE 1: STRUCTURAL AND NONSTRUCTURAL MATERIALS (3 hrs)

Overview of Materials and Building/Structural Types, Factors Affecting Choice of Materials and Structural Form, Mechanical Properties, Non-Mechanical Properties (physical properties, durability), Individual Building Materials Manufacturing, Properties, Comparative Behavior, Structural Steel, Composition, Material Properties, and Behaviour, Non-ferrous metals.

MODULE 2: STONES, BRICKS, CONCRETE BLOCKS (3 hrs)

Stone as a building material, Criteria for selection, Refractory bricks, Concrete blocks, Lightweight concrete blocks, Air Cleaning Bricks, Passive Cooling Ceramics or hydro ceramic bricks, Fly ash bricks, AAC, ECA, CLC blocks, EPS Building.

MODULE 3: TIMBER, ROOF & FLOORING MATERIALS (4 hrs)

Timber, Market forms, Industrial Timber, Plywood, Mass timber, laminated timber and glue, laminated timber, Veneer, thermocol, Panels of laminates, Steel, Aluminum and Other Metallic Materials, Composition, Aluminium composite panel, Market forms, Mechanical treatment, Granite, Tile flooring, Cladding of tiles, materials according to types of roof, Elements of a pitched roof, Trussed roof, Steel Truss, Different roofing materials, R.C.C. Roof.

MODULE 4: NONSTRUCTURAL MATERIALS, ACCESSORIES, AND FINISHES (5 hrs)

Materials for doors and windows, Paneled door, Flush door, Collapsible door, Rolling shutter, PVC Door, Review of Nonstructural Materials and Criteria for Selection, Polymer Floor Finishes, Paints, varnishes, enamel, distemper, Tiles, Acoustic Treatment, Drywalls, Anchors, plumbing and sanitary fittings.

MODULE 5: EXTERIOR WALL MATERIALS (4 hrs)

Gypsum Area Separation Walls, Insulated Vinyl Siding, Tilt, Up Walls, OVE Framing, ICF Walls, House Wrap Installation Tips, Common Cladding Alternatives, Insulated Wall Panels, WPC sheets, Cinder Block Walls, GFRG panels, Alusion panels, 3D, printed bioplastics.

MODULE 6: NEW GENERATION CONSTRUCTION MATERIALS (4 hrs)

Glass, Ceramics, Sealants for joints, Fibre glass-reinforced plastic, Clay products, Refractories, Composite materials, Types, Applications of laminar composites, Fibre textiles, Geomembranes and Geotextiles for earth reinforcement, Illuminating Cement, Prefabricated panels, Bubble deck slab, Terracotta hollow brick, Cigarette Butts, Recycled cardboard, Sensitile, electrified wood, flexicombo, Richlite, liquid granite, carbon fibre, bendable concrete, concrete canvas, low e glass, transparent aluminum, paper insulation, Concrete, Masonry, Programmable Cement, Strand Rods, Concrete: Admixture, translucent concrete, FRP, Shotcrete, Epoxy resin, and grouting.

MODULE 7: GREEN AND SUSTAINABLE CONSTRUCTION MATERIALS (2 hrs)

Bamboo, Reclaimed wood, cork, mycelium, recycled steel, straw bales, rammed earth, hempcrete, grasscrete, GGBFS, CSF, geopolymers, Silica fume, Fly ash, Red Mud, copper slag, construction demolition waste, waste plastic.

Text Books:

1. Varghese.P.C, "Building Materials", PHI Learning Pvt Ltd, New Delhi, 2012.

Water supply and Sanitary Engineering

Code	Course Title	Credit	T-P-PJ
CUTM2373	Water supply and Sanitary Engineering	2	1+1+0

Course objective

- To enable the students, understand about the drinking water, sources, quality, demand, conveyance, water treatment, design of treatment units, Waste water treatment, STP and solid waste collection, treatment along with house plumbing and different sanitary fittings

Course outcome

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	To analyse and estimate the quantity and quality of drinking water, solid and liquid waste water treatment units	PO1(3), PO2(2),PO6(2)
CO4	Design components of water supply and Sewage systems utilising various technical tools	PO3 (3), PO5 (2)

Course Syllabus

MODULE 1: SOURCES, QUALITY AND DEMAND OF WATER

(3 hrs)

Importance and necessity of water supply Engineering; Sources of water; Suitability of water; Choice of source; Types of demand Population forecast; Computation of quantity of water;

Fluctuation in demand; Factors affecting demand. Impurities in water; Collection of water sample; Physical Chemical and Biological tests; Standards of quality of water.

MODULE 2: TREATMENT OF WATER (3hr+2 hrs)

Objectives of water treatment; Location of water treatment plant; Layout of water treatment plant; Basic principles of working of treatment plant; Various stages of treatment of influent water; Functioning of Coagulation treatment plant; Sedimentation; Filtration; Disinfection

Practice session (2 hrs)

Practice 1: Predict Population from given field data by various methods

Practice II: Calculation of hardness of water from the observed field data

MODULE : 3 CONVEYANCE OF WATER (1hr+4 hrs)

Pumps and selection (outline only); Types of pipes used for conveyance; Pipe joints; Laying of Pipes; Distribution system; Types of valves; Types of Meters; Pipe fittings and fixtures of different materials their advantages and disadvantages; Necessity; Methods to prevent leaks; Measures for conservation of water.

Practice session (4 hrs)

Practice III: Design lay out of pipe system from the overhead tank to different supply terminals.

Practice IV: **Laboratory works:** Determination of pH value, Turbidity and hardness of water sample

MODULE 4: SANITATION SYSTEM (2hr+4 hrs)

Objective of sewage disposal; Methods of sewage collection; Conservancy system; Waste carriage system; Classification of Drains; Sewer System (Manhole; Flushing tank; Catch basin etc.)

Practice session (4 hrs)

Practice V: Preparation of AUTOCAD layout plans/ sketches of different Water treatment plant, Sewage treatment plant, sedimentation tank, filters, Manholes, Flushing tanks etc. 2hr

Practice VI: Design of Septic tank using HEC software 1hr

Practice VII: Design of Manhole from given field data 1hr

Field Visit: 4 hours

Water treatment plant and a sewage treatment plant must be followed by a field Visit report

MODULE 5: WASTE MANAGEMENT

(3hr+2 hrs)

Sewage Treatment plant; Treatment of sewage; Types of waste, sewage and sludge disposal (Solid, liquid, Radio Active), Utilization and management of solid waste.

Practice session

(2 hr)

Practice VIII: Determination of B.O.D. and C.O.D. of waste water sample 2hr

Suggested Reading

1. Text Book of water supply and sanitary Engineering; S K Hussain: Oxford and IBH
 2. Water supply & Sanitary Engineering; Vazirani & Chandola; Khanna Publishers
 3. Municipal and Rural Sanitation :Ehlers & Steel;Mc Graw hill book
- Elements of Public Health Engineering :K.N.Duggal, S.Chand & Co.

Computer Aided Engineering

Code	Course Title	Credit	T-P-PJ
CUTM1081	Computer Aided Engineering	3	0+2+1

Objective

This course will help student to use structural scenario, thermal scenario and to do Structural analysis and Thermal analysis of various problems.

Course outcome

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Able to gain Knowledge in solid modeling and assembly	PO1(3), PO2(2)
CO3	Able to identify and resolve the solid modeling problems and help to take decision in product design	PO2(3), PO3(1)
CO4	Acquire hands-on skill in solid modeling	PO3(3), PO2(1)

Course content

Module I: Material and Selection Properties

(6 Hrs)

Property Module, Material Definitions, Linear Elasticity, Large Strain Elasticity, Metal Plasticity, Material Calibration, Material Databases, Section Properties

Practice:

1. Analysis of crack in pressure vessel
2. Cable stayed bridge simulation

Module II: Element Selection Criteria

(6 Hrs)

Solid Element Selection, Structural vs. Continuum Elements, Modeling Bending Using Continuum Elements, Stress Concentrations

Practice:

3. Stress analysis of rail road with wheel.
4. Bike frame structural analysis

Module III: Meshing

(8 Hrs)

Mesh Module, Mesh Elements Mesh Generation Workflow, Local Fine-tuning

Quality Checks, Mesh Compatibility, Mesh Convergence, Dependent and Independent Part Instances

Practice:

5. Airplane bracket structural analysis
6. Structural analysis of wind turbine blade

Module IV: Boundary Condition

(6 Hrs)

Step Module, Analysis Steps and Procedures, Output Requests, Output Files

Load Module, Loads and Boundary Conditions, Initial Conditions

Practice:

7. Generative structural analysis applied for design optimization
8. Stress analysis on a backhoe

Module V: Contact

(6 Hrs)

Mechanical Contact Properties, Contact Domain, Contact Formulation and Controls, Handling Initial Over closures, Contact Output

Practice:

9. Analysis of Economizer.
10. Analysis of Screw Jack

Module VI: Analysis Procedures

(6 Hrs)

Model and Analysis Steps, Analysis Procedures, The static, general analysis procedure, Finding a converged solution, The Static, Linear Perturbation procedure, Buckle procedure, Frequency Procedure, The dynamic, explicit analysis procedure, Stability Limit, Analysis Continuation Techniques

Practice:

11. Steady state analysis of a composite bar.

Module VII: Thermal Analysis

(8 Hrs)

Steady State Heat Transfer, Transient Heat Transfer, Thermal Interfaces, Thermal Stress Analysis

Practice:

12. Temperature distribution in radiators used in automobiles
13. Oven radiation simulation

14. Steady state thermal analysis of tungsten coil with internal heat generation
15. Thermal analysis of disc brake

Projects

1. Thermal Analysis of PV Solar Pannel
2. Structural and thermal analysis of Green House
3. Structural analysis of Quadcopter.
4. Structural analysis of landing gear.
5. Numerical study on different types of fins.
6. Overhead tank failure analysis.
7. Analysis of Rocket Nozzle
8. Analysis of BAJA SAE
9. Structural and Thermal Analysis of Downdraft Gasifier
10. Structural and Thermal Analysis of Stirling Engine
11. Structural Analysis of Hydraulic Press
12. Structural Analysis of Elevating Conveyor

Text Books/ Reference Books/ Reference Material

1. SIMULIA: 3DS Learning Space

Source of reference: 3DS peer learning

Hydraulic Machinery

Code	Course Title	Credit	T-P-PJ
CUTM1090	Hydraulic Machinery	2	1+1+0

Objective

- To emphasize Principle of operation of hydraulic machines and their system design
- To familiarize their huge applications in different industries

Course outcome

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Able to gain Knowledge on engineering design of the machines for required applications	PO1 (3)
CO3	Able to identify and resolve the problems and will learn to determine performance characteristics of fluid machinery by using various simulation tools	PO2(3), PO5(1)

Course content

Module I: Principle of Operation of Hydraulic Machinery (2 hrs)

Introduction to hydraulic machines: Classification and operation principle, Euler equation for turbo machines: net head developed by pump and Turbines

Module II: Radial and Axial flow pumps (8 hrs)

Velocity triangle of pumps, effect of inlet swirl on velocity triangles, Constructional features of Centrifugal Pump, design aspect, working principle and efficiencies, work done by the impeller, priming, specific speed, NPSH, effect of swirl on the cavitations, working principle and design aspect of gear oil pump.

Practice:

1. Flow analysis of fluid of Centrifugal pump through Simulia software
2. Flow analysis of gear oil pump through Simulia software
3. Performance Characteristics of Centrifugal Pump through Virtual lab

Module III: Positive displacement Pumps (3 hrs)

Working principle of Reciprocating Pump, discharge, work done and power requirement, ideal indicator diagram, and slip, characteristic H-Q curve of positive displacement pump

Practice:

4. Performance Characteristics of Double Acting Reciprocating Pump through Virtual lab.

Module IV: Hydraulic Turbine: Impulse Turbine (6 hrs)

Classification, definitions of heads and efficiencies, Pelton Wheel - Construction and working principle, work done and hydraulic efficiency, design aspects.

Practice:

5. Simulation of Pelton Turbine through simulia software
6. Performance Characteristics of Pelton Turbine through Virtual lab.

Module V: Hydraulic Turbine: Reaction Turbine (6 hrs)

Reaction turbine (Francis, Kaplan) -Components, working principle, work done and efficiency, draft tube, specific speed, cavitations

Practice:

7. Performance Characteristics of Francis Turbine Simulia software.
8. Simulation of Kaplan turbine through Virtual lab.

Text Books:

Fluid Mechanics with Finite Volume Method

Code	Course Title	Credit	T-P-PJ
CUTM1089	Fluid Mechanics with Finite Volume Method	3	2+1+0

Objective

- To learn fundamentals of computational methods like FVM for solving linear and non-linear partial differential equations related to fluid dynamics.
- To emphasizes the basic underlying fluid mechanical principles governing energy transfer in a fluid flow systems with their performances in different field of engineering applications

Course outcome

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Able to gain Knowledge on finite difference/volume schemes on model problems of computational fluid dynamics.	PO1 (3)
CO3	Able to identify and resolve the problems on steady state mechanical energy balance equation for fluid flow systems, estimate pressure drop in fluid flow systems	PO2(3), PO5(1)

Course content

Module I: Introduction to Finite volume Method

(6 hrs)

Fundamentals of Finite volume methods, different types of finite volume grids, approximation of surface and volume integrals; interpolation methods, Review of governing equations, Classification of governing equations, Staggered and co-located formulation.

Practice:

1. 2D mapped Mesh for rectangular pipe

2. 2D mapped Meshing for Aerofoil.

Module II: Grid generation (6 hrs)

Grid generation, creating, updating and managing meshes, Steady diffusion equation on structured meshes, Unsteady diffusion equation on structured meshes, Linear system solvers, finite volume discretization of steady and unsteady diffusion equation, Finite volume discretization of convection-diffusion problem

Practice:

3. 3D structure mesh of Circular Cylinder
4. 3D unstructured mesh with primes layers for Aerofoil
5. 3D coarse/ medium/ fine sweep mesh for pipe

Module III: Incompressible flow field calculation with finite volume method (5 hrs)

Navier-stokes equation, Discretization of the Momentum Equation: Stream Function-Vorticity approach and Primitive variable approach, Staggered grid and Collocated grid solutions of Navier-stokes equation with finite volume method, boundary condition, Reynolds averaged Navier-Stokes equations.

Module IV: Fluid kinematics (2 hrs)

Types of flow, Continuity equation (in one, two & three-dimension steady state fluid flow analysis with finite volume method, velocity and acceleration fields, streamline, streak line, path line, velocity potential function and stream function, Rotation and vorticity.

Module V: Fluid Dynamics with Finite volume method (4 hrs)

Lagrangian and Eulerian Approach, Euler's equation of motion along a stream line for ideal flow, Principle of conservation of energy with finite volume method, Integration of Euler's equation along a stream line, Bernoulli's equation

Practice:

6. Fluid Analysis of Bernoulli's equation: Flow in a contracting pipe through CFD simulation

Module VI: Flow through Pipes (5 hrs)

Reynolds's Experiment, Laws of Laminar and Turbulent Friction, Introduction Turbulence modeling through Finite volume method, Hagen Poiseuille Equation for laminar flow through pipe, Darcy-Weisbach Equation for Turbulent flow through pipe.

Practice:

7. Fluid Analysis of Laminar flow in 3D Circular Pipe through CFD simulation
8. CFD Simulation of the Water Flow Passing Through a Converging Pipe.
9. CFD Analysis to determine the frictional losses in the pipe.

Module VII: Flow Measurement

(5 hrs)

Flow through small orifice meter, Mouthpiece, Velocity Measurement using Pitot tube, Prandtl tube, Flow measurement in pipes-Flow, Venturi Meter, Flow rate Measurement in channel- Weir and Notches

Practice:

10. CFD Analysis of Fluid flow through Orifice meter
11. CFD Analysis of Fluid flow through adjustable channel
12. CFD Analysis of Fluid flow simulation through Venturi Meter

Text Books:

1. R.K. Bansal, Fluid Mechanics and Hydraulic Machines, Laxmi Publications, ninth edition
2. P.N. Modi & S.N. Seth, Hydraulics & Fluid Mechanics, Rajsons Publications Pvt. Ltd, Twentieth Edition

Theories of Failure Using Finite Element Analysis

Code	Course Title	Credit	T-P-PJ
CUTM1062	Theories of Failure Using Finite Element Analysis	4	2+2+0

Course Objective

- To educate the students on basic theories behind mechanics of solids.
- To educate the students on Finite Element Analysis concept applicable to Practical conditions.
- To educate the students on Failure Criterion which will be useful for designing Practical problems.
- To educate the students on using 3D Experience Tools for analysis of various mechanical structures and load transmitting elements.

Course Outcome

COs	Course Outcome	POs
CO1	Students will have knowledge and practical engineering skills in analysis of mechanical strength of structures and load transmission elements and will be able to design them based on input data.	PO1 (3), PO3 (3), PO12 (12)
CO2	Students will be able to deploy 3D Experience Platform to develop design solutions.	PO5 (3), PO3 (3), PO1 (2), PO12 (2)
CO3	Students will be able to apply the Concept of Meshing and Failure Criteria to Practical Problems which will lead Economical and safe in Design Aspect.	PO1 (1), PO2 (3), PO4 (3), PO5 (2), PO6 (2), PO7 (2), PO12 (2)

Course content

Module I Introduction to Finite Element Analysis (FEA) and 3D Experience Platform - (4(T)+5(P)) (9 Hours)

Introduction to FEA: Need for Studying FEA; Types of Analysis; Discretization of a Structure; Element Shapes, Nodes and Degrees of Freedom; Mesh Refining, Element Aspect Ratio, Use of Symmetry, Principle of Convergence; General Procedure of FEA.

Practice:

1. Introduction to 3D Experience Platform: About the Apps and their Applications from Engineering Point of View.

Module II Mesh Generation and Modeling of Truss Structure (1(T)+ 3(P) (4 Hours)

Mesh Generation and Methods of Meshing and Types of Meshing. Procedure for selecting the method of meshing and type of meshing. Importance and application of Stiffness Matrix for different types of elements and the procedure for getting the results.

Practice:

5. 3D Experience Simulia – Modelling and Meshing of a beam element.

Module III Stresses Criteria: (4(T)+ 4(P) (8 Hours)

Procedure for Drawing Shear Force and Bending Moment Diagrams, Point of Contra Flexure.

Practice:

6. Drawing SFD and BMD different beams with various boundary condition.

Module IV: Stresses (No Derivation): (7 Hours)

Simple or Pure Bending, Flexure Formula, Section Modulus, Neutral Axis, Determination of Bending Stresses, Shear Stress Distribution for Different Sections

Module V. Bending and Shear Stresses in Beams: (7 Hours)

Introduction, pure bending theory, Assumptions, derivation of bending equation, modulus of rupture, section modulus, flexural rigidity. Expression for transverse shear stress in beams, Bending and shear stress distribution diagrams for circular, rectangular, 'I', and 'T' sections. Shear centre(only concept)

Module VI Theories of Failure: (6 Hours)

Failure Under Biaxial Loading, Rankine's Theory, Guest's or Tresca's Theory, Von Mises Theory, Graphical Representation of Failure, Safety Factors, Prevention of Failure in Design Stage, Diagnosis of Failure in Post-Manufacturing Stage.

Module VII: Material failure Behaviour: (7 Hours)

Stress–Strain Diagrams for Ductile and Brittle Materials. Equivalent stresses for varying orientations, Principal stresses, maximum shear stress, Mohr’s circles.

Practice:

Tensile Test using Simulation 3D Experience Tool.

Stress Strain Curve of a Ductile Material (Mild Steel) using Universal Testing Machine

Text Books:

1. Strength of Materials, S.S. Rattan, Tata Mc-Graw Hill Publication.
2. Advanced Mechanics of Materials, A.P. Boresi and R.J. Schmidt, Willey India

Reference Books:

1. Elements of Fracture mechanics, Prashant Kumar, McGraw Hill Education (India)
2. Engineering Mechanics of Solids, Egor P. Popov, Pearson publication
3. Strength of Materials, R.K.Bansal, Laxmi Publications.

Database Management Systems

Code	Course Title	Credit	T-P-PJ
CUTM1059	Database Management Systems	3	2+1+0

Objective

- To understand the different issues involved in the design and implementation of a database system.
- To study the physical and logical database designs, database Modeling, relational, hierarchical, and network models.
- To understand and use data manipulation language to query, update, and manage a database.
- To develop an understanding of essential Properties of DBMS concepts such as: database security, integrity, concurrency.
- To design and build a simple database system and demonstrate competence with the fundamental tasks involved with modeling, designing, and implementing a DBMS.

Course outcome

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Acquire the knowledge on different database implementation for various applications	PO1 (3), PO12(1)
CO3	Solving different problems such as to convert the entity-relationship diagrams into relational tables, normalization and SQL queries	PO2(3)
CO4	Design database models and the entity-relationship diagrams of different databases using MySQL Workbench	PO3 (3)

Course content

Module-1: DBMS Concepts

[5 Hrs]

Data Abstraction - Data models and data independence. Instances and Schemas. Components of a DBMS and overall structure of a DBMS- Life Cycle of a DBMS application- Database terminology.

Module-2: Data Modeling

[5Hrs]

Basic concepts- Types of data models- Conceptual, physical and logical database models- E-R data model and Object-oriented data model. Components of ER Model- ER Modeling symbols. Entity and entity sets- Relations and relationship sets- E-R Diagrams- Reducing E-R Diagrams into tables.

Practice

Assume we have the following application that models soccer teams, the games they play, and the players in each team. In the design, we want to capture the following:

- We have a set of teams, each team has an ID (unique identifier), name, main stadium, and to which city this team belongs.
- Each team has many players, and each player belongs to one team. Each player has a number (unique identifier), name, DoB, start year, and shirt number that he uses.
- Teams play matches, in each match there is a host team and a guest team. The match takes place in the stadium of the host team.
- For each match we need to keep track of the following:
 - The date on which the game is played
 - The final result of the match
 - The players participated in the match. For each player, how many goals he scored, whether or not he took yellow card, and whether or not he took red card.
 - During the match, one player may substitute another player. We want to capture this substitution and the time at which it took place.
- Each match has exactly three referees. For each referee we have an ID (unique identifier), name, DoB, years of experience. One referee is the main referee and the other two are assistant referee.

Design an ER diagram to capture the above requirements. State any assumptions you have that affects your design (use the back of the page if needed). Make sure cardinalities and primary keys are clear.

Module-3: Relational DBMS Model

[5 Hrs]

Basic concepts, Attributes and domains- Intention and extensions of a relation- concept of integrity and referential constraints- Relational Query Languages (Relational algebra and relational calculus (Tuple and domain relational calculus).

Module-4: Relational Database Design

[6 Hrs]

Notion of normalized relations- Normalization using Functional Dependency- First Normal form- Second Normal Form- Third Normal form- BCNF.

Practice

Perform NF on the given table

[CLICK HERE FOR TABLE](#)

Module-5: SQL

[6 Hrs]

Structure of a SQL query- DDL and DML, TCL- SQL queries and sub queries- Tables, views and indexes.

Practice

To study DDL-create and DML-insert commands.

(i) Create tables according to the following definition.

```
CREATE TABLE DEPOSIT (ACTNO VARCHAR2(5), CNAME VARCHAR2(18), BNAME  
VARCHAR2(18), AMOUNT NUMBER (8,2), ADATE DATE);  
CREATE TABLE BRANCH (BNAME VARCHAR2(18), CITY VARCHAR2(18)); CREATE  
TABLE CUSTOMERS (CNAME VARCHAR2(19), CITY VARCHAR2(18));  
CREATE TABLE BORROW(LOANNO VARCHAR2(5), CNAME VARCHAR2(18), BNAME  
VARCHAR2(18), AMOUNT NUMBER (8,2));
```

(ii) Insert the data as shown below.

DEPOSIT

[CLICK HERE FOR TABLE](#)

BRANCH

[CLICK HERE FOR TABLE](#)

CUSTOMERS

[CLICK HERE FOR TABLE](#)

BORROW

[CLICK HERE FOR TABLE](#)

- (1) Describe deposit, branch.
- (2) Describe borrow, customers.
- (3) List all data from table DEPOSIT.
- (4) List all data from table BORROW.
- (5) List all data from table CUSTOMERS.
- (6) List all data from table BRANCH.
- (7) Give account no and amount of depositors.
- (8) Give name of depositors having amount greater than 4000.
- (9) Give name of customers who opened account after date '1-12-96'.

Module-6: Aggregate functions [4 Hrs]

Set Operations, predicates and joins, Set Membership- Tuple variables- Set comparison- Database modifications using SQL.

Practice

Create the below given table and insert the data accordingly.

Create Table Job (job_id, job_title, min_sal, max_sal)

COLUMN NAME DATA TYPE

job_id Varchar2(15)

job_title Varchar2(30)

min_sal Number(7,2)

max_sal Number(7,2)

Create table Employee (emp_no, emp_name, emp_sal, emp_comm, dept_no)

COLUMN NAME DATA TYPE

emp_no Number(3)

emp_name Varchar2(30)

emp_sal Number(8,2)

emp_comm Number(6,1)

dept_no Number(3)

Create table deposit(a_no,cname,bname,amount,a_date).

COLUMN NAME DATA TYPE

a_no Varchar2(5)

cname Varchar2(15)

bname Varchar2(10)

amount Number(7,2)

a_date Date

Create table borrow(loanno,cname,bname,amount).

COLUMN NAME DATA TYPE

loanno Varchar2(5)

cname Varchar2(15)

bname Varchar2(10)

amount Varchar2(7,2)

Insert following values in the table Employee.

emp_n	emp_name	emp_sal	emp_comm	dept_no

101	Smith	800	20	

102	Snehal	1600	300	25

103	Adama	1100	0	20

104	Aman	3000	15	

105	Anita	5000	50,000	10

106	Sneha	2450	24,500	10

107	Anamika	2975	30	

Insert following values in the table job.

[CLICK HERE FOR TABLE](#)

Insert following values in the table deposit.

[CLICK HERE FOR TABLE](#)

Perform following queries

(1) Retrieve all data from employee, jobs and deposit.

(2) Give details of account no. and deposited rupees of customers having account opened

between dates 01-01-06 and 25-07-06.

- (3) Display all jobs with minimum salary is greater than 4000.
- (4) Display name and salary of employee whose department no is 20. Give alias name to name of employee.
- (5) Display employee no,name and department details of those employee whose department lies in(10,20)

To study various options of LIKE predicate

- (1) Display all employee whose name start with 'A' and third character is 'a'.
- (2) Display name, number and salary of those employees whose name is 5 characters long and first three characters are 'Ani'.
- (3) Display the non-null values of employees and also employee name second character should be 'n' and string should be 5 character long.
- (4) Display the null values of employee and also employee name's third character should be 'a'.
- (5) What will be output if you are giving LIKE predicate as '%_%' ESCAPE '\'

To Perform various data manipulation commands, aggregate functions and sorting concept on all created tables.

- (1) List total deposit from deposit.
- (2) List total loan from karolbagh branch
- (3) Give maximum loan from branch vrce.
- (4) Count total number of customers
- (5) Count total number of customer's cities.
- (6) Create table supplier from employee with all the columns.
- (7) Create table sup1 from employee with first two columns.
- (8) Create table sup2 from employee with no data
- (9) Insert the data into sup2 from employee whose second character should be 'n' and string should be 5 characters long in employee name field.
- (10) Delete all the rows from sup1.
- (11) Delete the detail of supplier whose sup_no is 103.
- (12) Rename the table sup2.
- (13) Destroy table sup1 with all the data.

(14) Update the value dept_no to 10 where second character of emp. name is 'm'.

(15) Update the value of employee name whose employee number is 103.

To study Single-row functions.

(1) Write a query to display the current date. Label the column Date

(2) For each employee, display the employee number, job, salary, and salary increased by 15% and expressed as a whole number. Label the column New Salary

(3) Modify your query no 4.(2) to add a column that subtracts the old salary from the new salary. Label the column Increase

(4) Write a query that displays the employee's names with the first letter capitalized and all other letters lowercase, and the length of the names, for all employees whose name starts with J, A, or M. Give each column an appropriate label. Sort the results by the employees' last names.

(5) Write a query that produces the following for each employee:
earns monthly

(6) Display the name, hire date, number of months employed and day of the week on which the employee has started. Order the results by the day of the week starting with Monday.

(7) Display the hiredate of emp in a format that appears as Seventh of June 1994 12:00:00 AM.

(8) Write a query to calculate the annual compensation of all employees (sal+comm.).

Displaying data from Multiple Tables (join)

(1) Give details of customers ANIL.

(2) Give name of customer who are borrowers and depositors and having living city nagpur

(3) Give city as their city name of customers having same living branch.

(4) Write a query to display the last name, department number, and department name for all employees.

(5) Create a unique listing of all jobs that are in department 30. Include the location of the department in the output

(6) Write a query to display the employee name, department number, and department name for all employees who work in NEW YORK.

(7) Display the employee last name and employee number along with their manager's last name and manager number. Label the columns Employee, Emp#, Manager, and Mgr#, respectively.

(8) Create a query to display the name and hire date of any employee hired after employee SCOTT.

Module-7: Transaction Management [8 Hrs]

Subqueries, Manipulating Data, Transaction management and Concurrency control

Practice

To apply the concept of Aggregating Data using Group functions.

- (1) List total deposit of customer having account date after 1-jan-96.
- (2) List total deposit of customers living in city Nagpur.
- (3) List maximum deposit of customers living in bombay.
- (4) Display the highest, lowest, sum, and average salary of all employees. Label the columns Maximum, Minimum, Sum, and Average, respectively. Round your results to the nearest whole number.
- (5) Write a query that displays the difference between the highest and lowest salaries. Label the column DIFFERENCE.
- (6) Create a query that will display the total number of employees and, of that total, the number of employees hired in 1995, 1996, 1997, and 1998
- (7) Find the average salaries for each department without displaying the respective department numbers.
- (8) Write a query to display the total salary being paid to each job title, within each department.
- (9) Find the average salaries > 2000 for each department without displaying the respective department numbers.
- (10) Display the job and total salary for each job with a total salary amount exceeding 3000, in which excludes president and sorts the list by the total salary.
- (11) List the branches having sum of deposit more than 5000 and located in city bombay.

To solve queries using the concept of sub query.

- (1) Write a query to display the last name and hire date of any employee in the same department as SCOTT. Exclude SCOTT
- (2) Give name of customers who are depositors having same branch city of mr. sunil.
- (3) Give deposit details and loan details of customer in same city where pramod is living.

- (4) Create a query to display the employee numbers and last names of all employees who earn more than the average salary. Sort the results in ascending order of salary.
- (5) Give names of depositors having same living city as mr. anil and having deposit amount greater than 2000
- (6) Display the last name and salary of every employee who reports to ford.
- (7) Display the department number, name, and job for every employee in the Accounting department.
- (8) List the name of branch having highest number of depositors.
- (9) Give the name of cities where in which the maximum numbers of branches are located.
- (10) Give name of customers living in same city where maximum depositors are located.

Manipulating Data

- (1) Give 10% interest to all depositors.
- (2) Give 10% interest to all depositors having branch vnce
- (3) Give 10% interest to all depositors living in Nagpur and having branch city Bombay.
- (4) Write a query which changes the department number of all employees with empno 7788's job to employee 7844's current department number.
- (5) Transfer 10 Rs from account of anil to sunil if both are having same branch.
- (6) Give 100 Rs more to all depositors if they are maximum depositors in their respective branch.
- (7) Delete depositors of branches having number of customers between 1 to 3.
- (8) Delete deposit of vijay.
- (9) Delete borrower of branches having average loan less than 1000.

To apply the concept of security and privileges.

To study Transaction control commands

Programming in Java

Code	Course Title	Credit	T-P-PJ
CUTM1058	Programming in Java	3	2+1+0

Objective

- Understand fundamentals of programming such as variables, conditional and iterative execution, methods, etc.
- Understand fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries, etc.
- Be aware of the important topics and principles of software development
- Have the ability to write a computer program to solve specified problems
- Have the ability to write a computer program to solve specified problems
- Be able to use the Java SDK environment to create, debug and run simple Java programs

Course outcome

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Will gain Knowledge on object oriented java programming	PO1 (3), PO12(2)
CO2	Identify and fix defects the common safety issues in code	PO2 (3)
CO3	Read and make elementary modifications to Java programs that solve real-world	PO3(3), PO5(2)

	problems	
CO4	Design and develop several applications with hands-on	PO3 (3)

Course content

Module I: Introduction to Java (8 hrs)

Features and Installation, Java Programming Basics, Decision Making and Looping, Class and Object, Inheritance

Practice 1 (1 Hr)

Practice 2 (1 Hr)

Module II: Package and Safe Code (5 Hr)

Interfaces, Packages and Access Protection, Exception Handling (Fault Tolerant Programming)

Practice 3 (1 Hr)

Module III: Collection and Threads (5 Hr)

ArrayList, Vector, Set, Map, Multi-threaded Programming, Synchronization

Practice 4 (1 Hr)

Module IV: Language and Utility Packages (5 Hr)

String Handling, Wrappers, Runtime Memory Management, Cloning, Calendar, Date and Time Facilities, Scanner, Internationalization

Practice 5 (1 Hr)

Practice 6 (1 Hr)

Module V: Input/ Output and Applets (5 Hr)

Byte and Character Stream I/O, Persistence, Applet: Architecture, Skeleton, and Implementation

Practice 7 (1 Hr)

Practice 8 (1 Hr)

Module VI: GUI Programming (5 Hr)

AWT: Container, Components, Layout Managers, Event Handling

Practice 9 (1 Hr)

Practice 10 (1 Hr)

Module VII: Networking and Advanced

(5 Hr)

Networking Fundamental, Client-Server Communication, Remote Method Invocation (RMI),
Java Virtual Machine (JVM) Tuning, Java Profiler

Practice 11 (1 Hr)

Practice 12 (1 Hr)

List of Practices:

Practice 1 (Module-I)

Program-1:

Write a program that computes the standard deviation of a set of floating point numbers that the user enters. First the user says how many numbers N are to follow. Then the program asks for

and reads in each floating point number. Finally, it writes out the standard deviation. The standard deviation of a set of numbers X_i is:

$$SD = \text{Math.sqrt}(\text{avgSquare} - \text{avg2})$$

Here, avg is the average of the N numbers, and avg2 is its square.

avgSquare is the average of $X_i * X_i$. In other words, this is the average of the squared value of each floating point number.

For example, if $N = 4$, say the numbers were:

$X_i \quad X_i * X_i$

2.0 4.0

3.0 9.0

1.0 1.0

2.0 4.0

sum 8.0 18.0

Now:

$$\text{avg} = 8.0/4 = 2.0$$

$$\text{avg2} = 4.0$$

$$\text{avgSquare} = 18.0/4 = 4.5$$

$$SD = \text{Math.sqrt}(4.5 - 4.0) = \text{Math.sqrt}(.5) = 0.7071067812$$

To do this you will need to do several things inside the loop body for each floating point value as it comes in: add it to a sum, square it and add it to a sum of squares. Then after the loop is finished apply the formula.

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 2 (Module-I)

Program-1:

Better encapsulation of the Goods class would call making instance variables private and using getter and setter methods to access them. A further refinement would be to make the class abstract and to define additional child classes. Here is a revised Goods class:

```
public abstract class GoodsSGA{  
    private String description;  
    private double price;  
    private int quantity;  
    public GoodsSGA( String des, double pr, int quant )  
    {description = des;  
    price = pr;  
    quantity = quant;}  
    double getPrice()  
    {return price;}  
    void setPrice( double newPrice)  
    {price = newPrice;}  
    int getQuantity()  
    {return quantity;}  
    void setQuantity ( int newQuantity )  
    {quantity = newQuantity;}  
    public String toString()  
    {return "item: " + description + " quantity: " + quantity + " price: " + price ;}
```

Revise the source code for the classes Food, Toy, and Book. (Perhaps call the revised classes FoodSG, ToySG, and BookSG.) create a new class ToiletrySG for things like bubble bath.

Create a new testing class, StoreSG to test your revised classes.

Note: the child classes will need to use the getter and setter methods to access the instance variables that are declared as private in GoodsSG.

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 3 (Module-II)

Program-1:

User-Friendly Division Practice:

Put in a loop so that the user is repeatedly asked for the numerator and the divisor. For each set of data, the program prints out the result, or an informative error message if there is a problem (division by zero or poor input data).

The program continues looping, even if there is a problem. Exit the loop when data entered for the numerator starts with characters "q" or "Q". Don't print out an error message in this case. Don't ask for the divisor if the user just asked to quit.

Here is sample output from one run:

Enter the numerator: 12

Enter the divisor: 4

12 / 4 is 3

Enter the numerator: 12

Enter the divisor : 0

You can't divide 12 by 0

Enter the numerator: glarch

You entered bad data.

Please try again.

Enter the numerator: quit

You will need to use the method `charAt()` from the `String` class.

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 4 (Module-III)

Program-1:

In mathematics, several operations are defined on sets. The union of two sets A and B is a set that contains all the elements that are in A together with all the elements that are in B. The intersection of A and B is the set that contains elements that are in both A and B. The difference of A and B is the set that contains all the elements of A except for those elements that are also in B.

Suppose that A and B are variables of type `Set` in Java. The mathematical operations on A and B can be computed using methods from the `Set` interface. In particular:

A.addAll(B) computes the union of A and B; A.retainAll(B) computes the intersection of A and B; and A.removeAll(B) computes the difference of A and B. (These operations change the contents of the set A, while the mathematical operations create a new set without changing A, but that difference is not relevant to this exercise.)

For this exercise, you should write a program that can be used as a “set calculator” for simple operations on sets of non-negative integers. (Negative integers are not allowed.) A set of such integers will be represented as a list of integers, separated by commas and, optionally, spaces and enclosed in square brackets. For example: [1,2,3] or [17, 42, 9, 53,108]. The characters +, *, and - will be used for the union, intersection, and difference operations. The user of the program will type in lines of input containing two sets, separated by an operator. The program should perform the operation and print the resulting set.

Here are some examples:

Input Output

```
-----  
[1, 2, 3] + [3, 5, 7] [1, 2, 3, 5, 7]  
[10,9,8,7] * [2,4,6,8] [8]  
[ 5, 10, 15, 20 ] - [ 0, 10, 20 ] [5, 15]
```

To represent sets of non-negative integers, use sets of type `TreeSet<Integer>`. Read the user’s input, create two `TreeSets`, and use the appropriate `TreeSet` method to perform the requested operation on the two sets. Your program should be able to read and process any number of lines of input. If a line contains a syntax error, your program should not crash. It should report the error and move on to the next line of input. (Note: To print out a Set, A, of Integers, you can just say `System.out.println(A)`. We’ve chosen the syntax for sets to be the same as that used by the system for outputting a set.)

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 5 (Module-IV)

Program-1:

Password Checker:

Write a program that repeatedly asks the user for a proposed password until the user enters an acceptable password. When the user enters an acceptable password, the program writes a message and exits.

Acceptable passwords:

Are at least 7 characters long.

Contain both upper and lower case alphabetic characters. Contain at least 1 digit. The logic of this program can be quite tricky. Hint: use `toUpperCase()`, `toLowerCase()`, and `equals()`. You will also need nested ifs.

Here is a run of the program:

Enter your password:

snowflake

That password is not acceptable.

Enter your password:

SnowFlake

That password is not acceptable.

Enter your password:

snowflake47

That password is not acceptable.

Enter your password:

Snowflake47

Acceptable password.

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 6 (Module-IV)

Program-1:

Secret Code:

A text message has been encoded by replacing each character of the message with an integer.

Each integer is an index into a key-phrase that contains all the lower case letters of the alphabet

as well as the space character. The key-phrase may contain the same character in several locations. The encoded text is series of integers, like this:

35 10 10 33 9 24 3 17 41 8 3 20 51 16 38 44 47 32 33 10 19 38 35 28 49

To decode the message, look up each integer in the key-phrase and output the corresponding character. For example, say that the key-phrase is this (the index of each character has been written above it):

111111111122222222223333333333444444444455

0123456789012345678901234567890123456789012345678901

six perfect quality black jewels amazed the governor

using each integer from the encoded text as an index into the phrase results in the decoded message:

attack the bridge at dawn

Write a program that decodes a secret message contained in a text file. The first line of the text file contains the key-phrase. Then the file contains a sequence of integers, each of which indexes the key-phrase. Find the character corresponding to each integer and output the secret message. Note if a character character such as 'e' occurs several places in the key-phrase it may be encoded as different integers in different parts of the secret message.

(The recipient of the secret message gets only the file of integers and must put the key-phrase at the top of the file.) For example, here is the contents of a secret message file ready for the program:

six perfect quality black jewels amazed the governor

35 10 10 33 9 24 3 17 41 8 3 20 51 16 38 44 47 32 33 10 19 38 35 28 49

Here is a sample run of the program:

C:\> java Decode < secretFile.txt

attack the bridge at dawn

You will need the `charAt()` method of `String`.

Here is another secret message file, with key-phrase inserted, that you can use to test your program:

six perfect quality black jewels amazed the governor

31 16 2 3 4 42 48 7 27 9 10 43 12 13 35 15 1 40 18 3

20 15 33 23 24 32 26 29 28 27 21 31 25 14 34 14 36

42 38 19 40 41 27 3 44 50 46 42 48 49 50 6

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 7 (Module-V)

Program-1:

Stop Word Remover:

Write a program that reads in a file of text, perhaps the text of a novel. The program copies the same text to an output file, except that all the useless words such as "the", "a", and "an" are removed. (Decide on what other words you wish to remove. The list of words removed is called a stop list.) Do this by reading the text file token by token using `hasNext()` and `next()`, but only writing out tokens not on the stop list.

Prompt the user for the names of the input and output files.

Fairly Easy: The output file will have only N tokens per line. Do this by counting tokens as you output them. N will be something like 10 or 12.

Improved Program: Preserve the line structure of the input file. Do this by reading each line using `nextLine()` and then creating a new Scanner for that line. (Look at the on-line documentation for Scanner.) With each line's Scanner, use `hasNext()` and `next()` to scan through its tokens.

Harder: Write out no more than N characters per line. N will be something like 50. Do this by keeping count of the number of characters written out per line. The `length()` method of String will be useful. If X characters have already been written to the current line, and if X plus the length of the current token exceeds N, then start a new line.

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 8 (Module-V)

Program-1:

E-Mail Address Extractor:

Write a program that scans a text file for possible e-mail addresses. Addresses look like this:
someone@somewhere.net

Read tokens from the input file one by one using hasNext() and next(). With the default delimiters of Scanner, an entire e-mail address will be returned as one token. Examine each token using the indexOf() method of String. If a token contains an at sign @ followed some characters later by a period, regard it as a possible e-mail address and write it to the output file. Programs such as this scan through web pages looking for e-mail addresses that become the targets of spam. Because of this, many web pages contain disguised e-mail addresses that can't easily be automatically extracted.

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 9 (Module-VI)

Program-1:

User-friendly Fat Calculator, with Advice:

Further modify the calories from fat calculator so that it includes another TextField that will be set with the text "Too many fat calories" if the percentage of calories from fat is equal or greater than 30 percent, or to "Healthy amount of fat" if the percentage is less than that.

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 10 (Module-VI)

Program-1:

Three Button Monte:

Write a program to implement a game:

There are three buttons in the frame. Two of the buttons cause the program to quit using System.exit(0); the remaining button changes the frame to green (a win!) The winning button is different each time the game is played.

The easy way to do this (although it seems unfair to the user) treats each button the same way.

The actionPerformed() method does not check which button was clicked. When any button is

clicked, the method picks a random integer from 0 to 2 and performs the "winning" action if the integer happens to be 0. Otherwise, it performs the "losing" action. To the user, it seems like there is a "winning" button and two "losing" buttons. But, in fact, it does not matter which button was clicked.

This is similar to some electronic gambling devices in casinos, where it appears to the user that there are "winning moves" and "losing moves" but in fact the machine actually ignores what the user has done and just declares a "win" every now and then, according to predetermined odds.

You will need the Random class:

```
Random randNum = new Random(); // create a Random number object  
int someInt = randNum.nextInt(3); // someInt gets a number from 0 to 2
```

Program-2 and Program-3:

Two suggested competitive programs to solve on HackerRank

<https://www.hackerrank.com/domains/java>

Practice 11 (Module-VII)

Content Delivery with Networking:

Write a Client-Server program where the client queries with a name of file and the server delivers the content of requested files to the client over the network.

(Improve the program by making the server multi-threaded)

Practice 12 (Module-VII)

Greet the user with Remote Method Invocation:

Write a program using RMI, where the user invokes a method on remote object with username as parameter and receives a greeting message based on time of the day along with username.

Projects

However, not limited to:

1. Chat application
2. Text Editor application
3. GUI based Scientific Calculator
4. Paint application
5. Slam book

(*PROJECT REVIEWS WILL COMMENCE BEYOND CLASS HOURS)

Monitoring:

Credit will be received only on making an honest effort. It is expected that students will finish watching all lecture video and complete all challenge problems by the end of each lecture week. Borrowing code from other sources is allowed only with proper attribution and credit given to the original author(s).

List of Common Programs to solve using Java:

- 1. Program to calculate area of a triangle*
- 2. Program to solve quadratic equation*
- 3. Program to swap two variables (with and without using third variable)*
- 4. Program to generate random numbers in various ways*
- 5. Program to convert miles to kilometers and vice-versa*
- 6. Program to convert celsius to fahrenheit and vice-versa*
- 7. Program to check if a number is odd or even*
- 8. Program to check if input year is leap year*
- 9. Program to test primality*
- 10. Program to print all prime numbers in an interval using "Sieve of Eratosthenes"*
- 11. Program to generate factorial of all elements in an array*
- 12. Program to display the multiplication table up to 20*
- 13. Program to print the fibonacci sequence*
- 14. Program to check armstrong number, perfect number, Harshad number*
- 15. Program to generate armstrong numbers in an Interval*
- 16. Program to find the sum of Harshad numbers in an interval*
- 17. Program to display powers of two Using lambda*
- 18. Program to perform conversions among decimal to binary, octal and hexadecimal*
- 19. Program to display ASCII table*
- 20. Program to find HCF/GCD and LCM*
- 21. Program to find factors of given natural number*
- 22. Program to make a simple calculator*
- 23. Program to shuffle deck of cards*
- 24. Program to generate fibonacci sequence using recursion*

- 25. Program to find sum of natural numbers using recursion*
- 26. Program to find factorial of number using recursion*
- 27. Program to convert decimal to binary using recursion*
- 28. Program to add two matrices*
- 29. Program to obtain transpose of a matrix*
- 30. Program to multiply two matrices*
- 31. Program to check if a string is palindrome*
- 32. Program to remove punctuations from a string*
- 33. Program to sort words lexicographically*
- 34. Program to illustrate different set operations*
- 35. Program to count frequency of each vowel in a string*
- 36. Program to find hash value of a file*

Disaster Preparedness & Planning Management

Code	Course Title	Credit	T-P-PJ
CUTM1907	Disaster Preparedness & Planning Management	2	2+0+0

Course Objective

- To Understand basic concepts in Disaster Management
- To Understand Definitions and Terminologies used in Disaster Management
- To Understand Types and Categories of Disasters
- To Understand the Challenges posed by Disasters
- To understand Impacts of Disasters Key Skills

Course Outcome

COs	Course Outcome	POs
CO1	Able to develop competencies knowledge in the application of disaster concepts to management.	PO1 [3], PO3 [2]
CO2	Able to analyze the relationship between Development and Disasters based on environment requirements.	PO2 [2], PO7[3]
CO3	Understand the categories of disasters and realization of the responsibilities to society based on field investigation.	PO4 [2], PO6 [2]

Syllabus

MODULE 1: INTRODUCTION

(3 Hrs)

Concepts and definitions: disaster, hazard, vulnerability, risks severity, frequency and details, capacity, impact, prevention, mitigation).

MODULE 2: DISASTERS

(6 Hrs)

Disasters classification; natural disasters (floods, draught, cyclones, volcanoes, earthquakes, tsunami, landslides, coastal erosion, soil erosion, forest fires etc.); manmade disasters (industrial pollution, artificial flooding in urban areas, nuclear radiation, chemical spills, transportation accidents, terrorist strikes, etc.); hazard and vulnerability profile of India, mountain and coastal areas, ecological fragility.

MODULE 3: DISASTER IMPACTS (3 Hrs)

Disaster impacts (environmental, physical, social, ecological, economic, political, etc.); health, psycho-social issues; demographic aspects (gender, age, special needs); hazard locations; global and national disaster trends; climate change and urban disasters.

MODULE 4: DISASTER RISK REDUCTION (DRR) (4 Hrs)

Disaster management cycle – its phases; prevention, mitigation, preparedness, relief and recovery; structural and non-structural measures; risk analysis, vulnerability and capacity assessment; early warning systems, Postdisaster environmental response (water, sanitation, food safety, waste management, disease control, security, communications); Roles and responsibilities of government, community, local institutions, NGOs and other stakeholders; Policies and legislation for disaster risk reduction, DRR programmes in India and the activities of National Disaster Management Authority.

MODULE 5: DISASTERS, ENVIRONMENT AND DEVELOPMENT (3 Hrs)

Factors affecting vulnerability such as impact of developmental projects and environmental modifications (including of dams, land use changes, urbanization etc.), sustainable and environmentally friendly recovery; reconstruction and development methods.

Surveying Techniques

Code	Course Title	Credit	T-P-PJ
CUTM2369	Surveying Techniques	3	1+2+0

Course Objective

- Apply the knowledge, techniques, skills and modern tools of mathematics, science, engineering, and technology to solve well-defined surveying problems appropriate to the discipline. To study the temporary adjustment of survey instruments by standard methods.
- Technical Adeptness - Graduates will be technically adept in Surveying Technology as well as supporting math and science disciplines, allowing these graduates to assist professional land surveyors in various surveying and mapping projects. Their technical skills and knowledge will enable them to perform their work duties with a commitment to quality, timeliness, and continuous improvement.
- To do various field works with the help of Modern Instruments e.g. GNSS, Total station and GPR.
- To Carry out topographic survey.

Course Outcome

COs	Course Outcomes	POs
CO1	Understand the basic principles of surveying for vertical, horizontal, linear and angular measurements to arrive at solutions to basic surveying problems.	PO1 (3),
CO2	Analyze type of survey operation required for problem solving in field to perform	PO2 (2), PO3 (3),
CO3	Design and implement different types of curves for deviating type of alignments, and applying surveying techniques to align highway and railway curves.	PO6 (2), PO4 (2)
CO4	Capture geodetic data to process and perform analysis for survey problems with the use of electronic instruments.	PO4 (2), PO5 (3)

Course outline:

MODULE-1: INTRODUCTION TO SURVEYING

(2 hrs)

Classification and Principles of Surveying, Geodetic and Plane (Topographic) Surveying, Surveying Instruments, Geometry of Ellipsoid: Everest and WGS 84, Latitude and Longitude, Co-ordinate System and Map Projection: Polyconic Projection, Lambert Conformal Conic Projection, Universal Transverse Mercator Projection, Map scale: Fractional or ratio scale, Linear Scale, Graphical Scale.

MODULE-2: BASIC SURVEY OPERATIONS

(2Th+6Pr)

Leveling: Concept and principles of levelling, Mean Sea Level, different types of levelling, their application, Source of error in Levelling (instrumental, natural, and personal) and elimination of errors.

Traversing: Traverse angle, Observation of Traverse Length, Selection of Traverse Station, Traverse Field Notes, Angle misclosure, Sources of error in traverse. Balancing angles, Computation of Azimuth or Bearing, Departure and Latitudes, Traverse adjustment, rectangular co-ordinates.

Practice Session:

1. Calculation of RL using HI and Rise and fall method.
2. Traverse by Total Station.

MODULE-3: TOTAL STATION

(2Th+4Pr)

Characteristics of Total Station /Electronics Total Station instrument, Function performed by Total Station, Parts of Total Station instrument, Handling and Setting up a Total station, Horizontal angle measurement, Vertical angle measurement, distance and angle measurement, Remote Elevation Measurement (REM), coordinate measurement, to view the data/ points collected, area calculation, data download. Source of error in total station.

Applications of total station: Detail survey i.e., data collection., Height measurement (Remote elevation measurement- REM, fixing of missing pillars (or) Setting out (or) Stake out, Resection. etc. Remote distance measurement (RDM) or Missing line measurement (MLM).

Practice Session:

4. Distance, angle and slope Measurements
5. Traverse adjustment (With help of software)
6. Area calculation using Total station
7. Height measurement (Remote elevation measurement- REM).
8. Fixing of missing pillars (or) Setting out (or) Stake out.
9. Preparation of contour maps using total station and surfer software.

MODULE 4: GLOBAL POSITIONING SYSTEM

(2Th+4Pra)

Hrs.

Introduction of Global Navigation Satellite System (GNSS): GNSS Satellites: Galileo, NAVSTAR Global Positioning System (GPS), GLONASS and BeiDou Navigation Satellite System. Indian Regional Navigation System, Navigation with Indian Constellation (Nirvik), Segments of GNSS/GPS: Control Segment, Space Segments, User Segment-operations of GPS; GPS signals and data; Geo-Positioning-Basic Concepts., accuracy, error sources and analysis, methodology for collection of data, adjustment computations and analysis.

MODULE 5: DIFFERENTIAL GLOBAL POSITIONING SYSTEM (2Th+4Pra)

Hrs.

Differential Global Positioning System: Method DGPS/DGNSS, Static and Rapid Static, Kinematic-Real time kinematic Survey, DGPS-GPS data processing and Accuracy, Real Time Kinematic Survey; data down loading and processing. Application of GPS in Surveying and Mapping, Navigation, Military, Location Based Services, Vehicle tracking, etc. Limitation of GPS & DGPS.

MODULE 6: GROUND PENETRATING RADAR (2Th+4Pra) Hrs.

GPR Explain working principle of ground penetrating radar (GPR), Describe the type of antennas used with GPR for different type of underground material detection, Use ground penetrating radar until a predefined depth from sub-surface based on the conductivity of material. Explain use of sketch/single line diagram (SLD). Describe the use of GPS/DGP in sync with GPR to get all data populated on map. Describe the use of other Utility locator like electromagnetic locator and other utility locators.

MODULE 7: CADASTRAL SURVEY (2Th+4Pra) Hrs.

Cadastral map preparation methodology, unique identification number of parcel, position of existing control points and its types, Adjacent boundaries and features, Topology Creation and verification. Scale of Cadastral map, Cadastral Survey by Total Station.

Text Books:

1. Surveying Vol I & II, III B C Purnima, Laxmi Publication.
2. Surveying, volume 1&2 BY S.K.Duggal, TMH publisher.

Reference Books:

1. Surveying & Levelling by T.P Kanitkar& V S Kulkarni.
2. Elementary Surveying, by Charles D. Ghilani and Paul R. Wolf Pearson Publication

Analysis of Structures

Code	Course Title	Credit	T-P-PJ
CUTM2370	Analysis of Structures	4	2+2+0

Course Objective

- To introduce the basic concepts and steps for reinforced concrete sectional design mainly in accordance with ultimate strength design.
- To help the student develop an intuitive feeling about structural and material wise behavior and design of reinforced concrete systems and elements.
- To make the students capable of identify and apply the applicable industry design codes relevant to the design of reinforced concrete members.
- To become familiar with professional and contemporary issues in the design and fabrication of reinforced concrete members.

Course Outcome

COs	Course Outcomes	POs
CO1	Understand the general knowledge on mechanical behaviour of reinforced concrete.	PO1 [3],
CO2	Understand the problems and its analysis of flexural members through design solutions.	PO2 [3], PO3 [2]
CO3	Analyze the transfer and development length of concrete reinforcement.	PO5 (3)

CO4	Understand the design and development of types of slabs, footings using software and laboratory experiments.	PO5 (3), PO4 [2]

Course Syllabus

MODULE-1: INTRODUCTION

(4Th+2Pra) Hrs.

Analysis of Indeterminate beams: Determination of internal forces at various sections of the beam by using force method (Consistent deformation method), three moment theorems.

Practices Session:

Determination of Shear force and bending moment, at various sections of the beam subjected to different types of loads using StaaD Analysis software.

Identification of point of contraflexure and point of zero shear.

1. Propped cantilever
2. Continuous beams
3. Fixed beams

MODULE-2: ANALYSIS OF FRAMES

(4Th+4Pra) Hrs.

Determination of internal forces at various sections of the portal frames by using displacement method (Slope-deflection method).

Practices Session:

Determination of Shear force and bending moment, at various sections/joints of the portal frame subjected to different types of loads using StaaD Analysis software.

Identification of point of contraflexure and point of zero shear.

1. Rigid jointed portal frame
2. Pin-jointed frame
3. Rigid jointed portal frame with sway

MODULE-3: DEFLECTION IN INDETERMINATE BEAMS

(4Th+3Pra) Hrs.

Determination of slope and deflection at various sections of the beam by using moment area method and conjugate beam method.

Practices Session:

Determination of deflections at various sections of the beam subjected to different types of loads using StaaD Analysis software.

1. Propped cantilever
2. Continuous beams
3. Over hanging beams

MODULE-4: DEFLECTION IN RIGID AND PIN JOINTED FRAMES (4Th+3Pra) Hrs.

Determination of slope and deflection at various sections/joints of the pin and rigid jointed frames by using Strain Energy method and unit load method.

Practices Session:

Determination of deflections at various sections of the frame subjected to different types of loads using StaaD Analysis software.

1. Rigid jointed portal frame
2. Pin-jointed frame
3. Rigid jointed portal frame with sway

MODULE-5: STRUCTURAL ANALYSIS USING FLEXIBILITY MATRIX METHOD

(4Th+4Pra) Hrs.

Properties of flexibility matrix, Development of flexibility matrix for various cases, Analysis of different types of beams and frames by using Flexibility matrix approach.

Practices Session:

Flexibility coefficients and their use in formulation of compatibility equations using MAT LAB.

1. Continuous beam
2. Propped Cantilever
3. Pin-jointed frame
4. Rigid jointed portal frame

MODULE-6: STRUCTURAL ANALYSIS USING STIFFNESS MATRIX METHOD

(6Th+4Pra) Hrs.

Properties of stiffness matrix, Development of stiffness matrix for various cases, Analysis of different types of beams and frames by using stiffness matrix approach.

Practices Session:

Stiffness coefficients for prismatic members and their use for formulation of equilibrium equation using MATLAB including the effect of settlement of supports.

1. Continuous beam
2. Propped Cantilever
3. Pin-jointed frame
4. Rigid jointed portal frame

MODULE-7: ANALYSIS AND CHECK FOR SAFETY (4Th+4Pra) Hrs.

Analysis checks, Post design checks, Pushover analysis, response spectrum analysis, time history analysis.

Practices Session:

1. Mass (Weight) Irregularity check as per the code
2. Story Displacement, Story Drift checks as per code
3. Modal Analysis Case [Eigen or Ritz Vectors], Time period
4. Time History Analysis

Text Books:

1. Matrix method in Structural Analysis, Pandit & Gupta; Tata McGraw Hill, 2008.
2. Structural Mechanics Vol. II, Junnarkar S.B; Charotar Publishers, 2008.

Reference Books:

1. Modern Methods in Structural Analysis, B.N. Thadani & J.P. Desai; Weinall Book Corporation, 1998.
2. Basic Structural Analysis, Reddy C.S; Tata McGraw Hill, 2004.
3. Intermediate Structural analysis, Wang C.K., Tata McGraw Hill. 2010.
4. Structural Analysis, L.S.Negi & R.S. Jangid, Tata McGraw Hill, 2008
5. Structural Analysis Vol. I and II, Gupta & Pandit, Tata McGraw Hill, 2008
6. Analysis of Framed Structure, Gare & Weaver, CBS Publication, 2nd Edition
7. Structural Analysis Volume – I , Devdas Menon, Narosa Publication
8. Structural Analysis Volume – I, Bhavikatti, 3rd edition, Vikas Publishers.
9. Basic Structural Analysis, C S Reddy, Tata McGraw Hill
10. Theory of Structures, Timoshenko & Young, Tata McGraw Hill.

TRANSPORTATION ENGINEERING

Code	Course Title	Credit	T-P-PJ
CUTM2371	Transportation Engineering	3	2+1+0

Objective

- To introduce transportation engineering principles with emphasis on designing principal element of highways along with the safe and efficient operation of highways

Course outcome

COs	Course Outcomes	POs
CO1	Students will gain knowledge on planning, material selection for construction, Economics and finance and designing of elements on highways.	PO1 (3), PO3 (2)
CO4	Acquire the skill of designing the geometric elements of highways using CIVIL 3D software.	PO5 (3)

Course Syllabus

MODULE I: INTRODUCTION AND BASIC IN GEOMETRIC DESIGN

(3Th+2Pra) Hrs.

Highway planning in India, development, rural and urban roads, road departments in India, road classification, road authorities i.e., IRC, NHAI, CRRI, NHDP etc. Introduction to geometry design: Objective of geometric design, Design speed, cross-section elements, sight distance, horizontal alignment, vertical alignment, Superelevation, camber, cross-section, lane width.

Practice Sessions:

Design of Horizontal Alignment using Civil 3D.

Design of Vertical Alignment using Civil 3D.

Create a profile using Civil 3D.

MODULE II: ROAD MATERIALS CHARACTERISTICS AND CONSTRUCTION

(4Th+6Pra) Hrs.

Introduction, Aggregate Characterization: Types of aggregates; Mechanical and shape properties of aggregates, aggregate texture and skid resistance, proportioning and blending of aggregates; Bitumen Characterization; Subgrade Soil Characterization: Properties of subgrade layers; different types of soils, Mechanical response of soil; SPT, DCPT, CPT, CBR. Construction: Plain cement concrete (PCC), Hot Mix Asphalt (HMA), Base/Sub-base layers.

Practice Sessions:

Test on aggregate

Los Angeles abrasion test.

Aggregate crushing test

Aggregate Impact value test

Specific gravity and water absorption

Flakiness index and elongation index test of Aggregate

Test on bitumen

Penetration test of bitumen

Ductility value test of bitumen

Softening point test of bitumen

Flash and Fire point test of bitumen

Specific gravity of bitumen

Test on subgrade

California bearing ratio test

MODULE III: PAVEMENT DESIGN

(4Th+2Pra)

Hrs.

Basis design of Flexible pavements and rigid pavements according to standards.

Practical Sessions:

Marshall Mix design

Plain Concrete Mix design

MODULE IV: TRAFFIC CHARACTERISTICS

(3Th+2Pra) Hrs.

Basic traffic characteristics-Speed, volume and concentration, Relationship between Flow, Speed and Concentration Volume Studies- Objectives, Methods; Speed studies- Objectives: Definition of Spot Speed, time mean speed and space mean speed, speed studies, parking study.

Practice Sessions:

Parking study (field study)

Vehicle volume counts (field study)

MODULE V: RAILWAY ENGINEERING AND GEOMETRY

(4Th+2Pra) Hrs.

Introduction on component parts of railway track, problems of multi gauge system, coning of wheels, alignments and survey, permanent way track components, Type of rail sections, creep of rails, wear and failure in rails, ballast requirements, sleeper requirements, types of sleepers. Geometric design: Gradients and grade compensation, various speeds on a railway track, superelevation, horizontal and vertical curves, Points and crossings, signaling and interlocking.

Practical Sessions:

Draw a neat sketch of typical cross section of a permanent way

Environmental resistance test for ballast.

Impurities test on ballast

MODULE VI: AIRPORT PLANNING AND VISUAL AIDS

(3Th+2Pra) Hrs.

Airport Master plan, Airport site selection, Air craft characteristics, Zoning laws, Airport classification, Runway orientation, Wind rose diagram, Runway length design, Terminal area and Airport layout, Visual aids and Air traffic control. Airport markings and lighting.

Practical Sessions:

Draw a topographical map for Airport Layout by GIS

Draw the typical layout of an airport using AutoCAD.

MODULE VII: HARBOUR & DOCK

(1Th+1Pra) Hrs.

Classification of Harbour basin, general layout of harbours, Docks, Different components of docks, Jetties and Dolphins.

Practice Sessions:

Draw layout of harbour using AutoCAD.

Text Books:

1. K.Khanna and C.E.G Justo, Highway engineering.
2. Principles of Transportation Engineering by Partha Chakraborty and Animesh Das
3. R Kadiyali, Traffic engineering and N B Lal, Principles and practice of highway engineering, Khanna Publications, 2005.
4. A text book of railway engineering, By S.C.Saxena and M.G.Arora
5. Air-port Engineering by S.K.Khanna and M.G.Arora

Reference Books:

1. Railway Engineering by Satish Chandra & MM Agrawal, Oxford University Press.
2. Transportation Engineering, Volume-II- Railways, Airports, Docks and Harbours, Bridges and Tunnels by C. venkatramaih, Universities Press.

Basket -V (Domain)

Aerial Surveying and Remote Sensing Applications

Course Title	Type of course	T+P+PJ	Prerequisite
Aerial Surveying and Remote Sensing Applications	Theory + Practice + Project	4+10+4	Nil

Courses Division:

DOMAIN: Aerial Surveying and Remote Sensing Applications (4-10-4)					
Sl. No.	Code	Subject Name	T+P+P	Credits	Hrs.
1.	CUAS2020	REMOTE SENSING & DIGITAL IMAGE PROCESSING	2+2+0	4	45
2.	CUAS2021	GEOSPATIAL TECHNOLOGY AND ITS APPLICATION	2+2+0	4	45
3.	CUAS2022	PHOTOGRAMMETRY AND ITS APPLICATION	0+2+0	2	25
4.	CUAS2023	LIDAR REMOTE SENSING AND ITS APPLICATIONS	0+2+0	2	25
5.	CUAS2024	HYPER-SPECTRAL REMOTE SENSING AND ITS APPLICATION	0+2+0	2	25
6.	CUAS2025	PROJECT	0+0+4	4	54
Total				18	

Objective:

- Apply the principles of Remote Sensing and GIS to collect, map and retrieve spatial information.
- Plan, assess and evaluate natural and manmade systems using geospatial models and methods.
- Use geospatial tools and techniques for natural resources planning and management.
- Pursue research and develop capabilities to handle multi-disciplinary field projects.
- Work in teams and demonstrate leadership skills with professional ethics

Course outcome:

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Able to identify specific data knowledge and analyses methodology for effective mapping and evaluation resources.	PO1 (3), PO2 [1]
CO2	Understand the geospatial models skills address to the social and engineering problems.	PO4 [1], PO6[1]
CO3	Design multi-criteria geospatial systems for decision-making process.	PO3 (2)
CO4	Work in a team using geospatial tools and environment to achieve project objectives.	PO9(3)
CO7	Pursue lifelong learning for professional advancement.	PO12 (3)

Evaluation System: As per university norms

Remote Sensing and Digital Image Processing

Subject Name	Code	Type of course	Credit	T+P+P	Prerequisite
Remote Sensing and Digital Image Processing	CUAS2020	Theory + Practice	4	2+2+0	NIL

Module: I Basic Concept of Remote Sensing

(4+6) Hours

Introduction of Remote Sensing: Principles of RS and its Type; Energy sources and Radiation principles, Pixel, DN value, Energy equation; EMR and Spectrum; EMR interaction with Atmosphere; scattering, Absorption, Atmospheric window, Black body radiation; EMR interaction with earth surface features, reflection, absorption, emission and transmission, Spectral signature; Interaction with vegetation, soil, water bodies; Advantage of RS over conventional method, Limitation, Ideal remote sensing.

Practice:

- Installation of Image Processing software's
- Download satellite data from GLOVIS / Earth Explorer / Bhuvan etc.
- Layer stacking
- LUT and Image Subset
- Spectral Signature mapping (soil, vegetation, water)

Module: II Digital Image

(2+3) Hours

Data acquisition: Procedure, Reflectance and Digital numbers; Intensity, Reference data, Ground truth, Analog to digital conversion, FCCs, TCC, Platforms and sensors; orbits, types, Resolutions; Image Interpretation; visual- Interpretation keys.

Practice:

- FCCs and TCC

- Resolution
- Image Interpretation

Module: III Satellite Information and Principles

(2+3) Hours

Land observation satellites, characters and applications; PSLV, GSLV, Satellite, Platform Types; LANDSAT series; IRS series; IKONOS Series; QUICKBIRD series; Weather/Meteorological satellites; INSAT series, NOAA, Applications, Marine observation satellites; OCEANSAT

Practice:

- Image filtering and Band ratioing
- Mosaicking

Module: IV Image Acquisition and Format

(2+4) Hours

Digital Image Processing; Export and import, Data formats; BSQ, BIL, BIP, Run length encoding, Image Compression Data products.

Practice:

- Export and Import
- Histogram
- Subset using AOI

Module: V Image Processing

(3+4) Hours

IMAGE RECTIFICATION; Pre-processing and Post Processing, Geometric distortion; sources and causes for distortion, rectification, GCP, Resampling, Image registration; Radiometric distortion; sources and causes, atmospheric correction.

Practice: (Spectral Python and ENVI)

- Geometric correction
- Radiometric correction
- Atmospheric correction

Module: VI Image Classification

(4+4) Hours

IMAGE CLASSIFICATION; Classification techniques, types, Supervised and Un-supervised; Principal Component Analysis (PCA); Image Enhancement; Accuracy assessment.

Practice:

- PCA analysis (spectral Python and ENVI)

- NDVI, DVI, NDWI calculation
- Image classification in Spectral analyst Mapper
- MNF Rationing
- Supervised Classification (spectral Python and ENVI)
- Un-supervised Classification (spectral Python and ENVI)
- Image Enhancement (ENVI)
- Accuracy Assessment (ENVI)

Module: VI Remote Sensing and Its application

(3+4) Hours

Microwave RS and its application; Thermal RS and its application; Optical RS and its application; Sensor and its types.

Practice: Using Spectral Python

- Application of microwave remote sensing (Structural Trend line mapping)
- Application of thermal remote sensing and case study (Land surface Temp. estimation)
- Application of optical remote sensing and case study

Geospatial Technology and its Application

Subject Name	Code	Type of course	Credit	T+P+P	Prerequisite
Geospatial Technology and its Application	CUAS2021	Theory +Practice	4	2+2+0	NIL

Module I: GIS & Cartography

(2+4) Hours

Components of GIS, Types of Data in GIS, Scale Application of GIS, Advantage and limitation of GIS. History and development of Cartography; Definition, scope and concepts of cartography, Characteristics of Map; Categories of maps, Methods of mapping, relief maps, thematic maps.

Practice:

1. **Symbology** (generalization, symbology, and colour effect, change symbology and use transparency in creative ways) using GRASS and QGIS, Geo-referencing (Map to Image and Image to Image), Projection, Data base creation: Digitization using Point, line and polygon, Edit, Clip, Intersect, Union, Merge, Join and subset. Attribute table editing
2. **Google Earth** (Convert Shape file to KML Format and KML File to shape file, import data into Google earth, Bhuvan view, Extract data from Google Earth, Extract Point Data, Extract Polygon data, Extract line data, overlaying an image into Google earth)

Module: II Data analysis tools

(2+4) Hours

Raster data spatial analysis, Network analysis, Vector operations and analysis, Data editing, Primary and secondary data. Data model and data structure, Geodatabase and metadata, GIS data model, Overlay analysis, Network modeling, Data Structure Models, Spatial interpolation; measurement and analysis methods, Advantage and disadvantage

Practice:

1. Linking of spatial and Non-spatial data and queries, joining tabular data with the feature attribute data, Non-spatial query, Spatial query, Spatial join, Vector based spatial analysis, Raster based spatial data analysis.
2. Buffering and Creation of Contour
3. Network Analysis

Module: III Multi-criteria analysis and decision making

(3+4) Hours

Principles and elements of multiple-criteria decision making, Classification of Multiple-criteria Decision Problem: Multi-objective Vs Multi-attribute, Decision Alternatives and constraints, Criterion weighting, Decision rules, Multiple-criteria decision making in spatial data analysis. Introduction to AHP, Basic Principles of AHP, Effect Table, Pair Wise comparison, Consistency,

Weightage, performance score, Case studies involving AHP

Practice:

1. Mapping accident locations using Linear Referencing technique.
2. Preparation of raster layers for Multicriteria Analysis
3. Solving a spatial problem using Multicriteria Analysis (Spatial AHP)

Module: IV Digital Elevation Model (DEM)

(2+4) Hours

Concept of DEM, Various techniques to generate DEM, Importance of spatial resolution to DEM, Integration of DEM to satellite data, Common derivatives of DEM, Slope, Aspects, TIN, Sources of DEM, Laminations and future of DEM.

Practice:

1. Google earth to DEM, 3D Map preparation, Contour to DEM, TIN and Aspect
2. DEM based surface Hydrology modeling,
3. LiDAR classification, DEM from LiDAR

Module: V Geospatial Technology for Water Resources Engineering

(3+4) Hours

Watershed, types, divide catchment, command area, stream types, Drainage network, different pattern; morphometric analysis, Bifurcation ratio analysis; Assessment of **Groundwater potential zones** and Groundwater mapping; Site selection for recharge structures, Hydrogeological Mapping GIS applications to ground water studies.

Practice:

1. Mapping of catchment, command area
2. Drainage network analysis
3. Morphometric analysis
4. Mapping of Groundwater potential zones

Module: VI Geospatial Technology for Environmental Engineering

(3+4) Hours

Monitoring atmosphere constituents; air pollution, industrial activity, modeling using GIS, Resource development in remote areas, Impacts of anthropogenic activity, Solid Waste management; Water Pollution, Shortest path Identification, Network analysis.

Practice:

1. Air pollution mapping
2. Solid waste management
3. Water pollution

Photogrammetry and Application

Subject Name	Code	Type of course	Credit	T+P+P	Prerequisite
Photogrammetry and Application	CUAS2022	Practice	2	0+2+0	NIL

Practice Experiments:

25Hours

- 1 Scale determination from aerial photo
- 2 Aerial photo Interpretation
- 3 Use of Parallax bar and determination of Height from stereo pair
- 4 Satellite DEM and ortho Image generation
- 5 Primary and additive colour creation
- 6 Stereo test
- 7 Mosaic
- 8 Stereoscopic vision
- 9 Relief displacement
- 10 Analog to digital conversion, Orientation of stereo model and Determination of Height
- 11 Aerial mapping using DRONE
- 12 Mosaicking of aerial Photo

13 Correction and rectification

14 DTM generation Image correction, Link between GIS and Digital Photogrammetry and Ortho Image generation

LIDAR Remote Sensing and Application

Subject Name	Code	Type of course	Credit	T+P+P	Prerequisite
LIDAR Remote Sensing and Application	CUAS2023	Practice	2	0+2+0	NIL

Practice Experiments:

1. Download of LIDAR data
2. Layer stacking
3. Data Validation
4. Georeferencing Technology
5. Boresight Calibration - Lidar Data Pre-processing
6. Project Coverage Verification - Review Lidar Data against Field Control
7. Lidar data errors and rectifications, - processes calibration of Lidar data - artifacts and anomalies - Lidar Error Budget.
8. Noise Removal and other sensor-related artifacts - Layer Extraction - Automated Filtering.
9. Manual Editing and Product Generation – Surface Editing - Hydrologic Enforcement
10. Breaklines, Contours, and Accuracy Assessment.
11. Topographic Mapping, flood inundation analysis, line-of-sight analysis
12. Forestry, various types of LIDAR sensors-, vegetation metric calculations - specific application software.
13. Corridor mapping system, data processing and quality control procedures.
14. Modelling

Hyperspectral Remote Sensing and Application

Subject Name	Code	Type of course	Credit	T+P+P	Prerequisite
Hyperspectral Remote Sensing and Application	CUAS2024	Practice	2	0+2+0	NIL

Practice Experiments:

25Hours

- 1 Introduction to ENVI, Python and Downloading, Displaying, and Analyzing Hyperspectral Imagery.
- 2 Atmospheric Correction of Hyperspectral Imagery.
- 3 MNF rationing from Hyperspectral (EO1)
- 4 Hyperspectral Image Classification Using Spectral Angle Mapper (SAM) & Spectral Feature Fitting (SFF).
- 5 Hyperspectral Imagery Classification Using an Unsupervised Neuron fuzzy System.
- 6 Application of Hyperspectral Imagery in Geological Studies.
- 7 Hyperspectral Signatures & Feature Fitting.
- 8 Hyperspectral Remote Sensing for Agriculture and soil Studies.
- 9 Hyperspectral Remote Sensing for Forestry Applications.
- 10 Hyperspectral Remote Sensing for Urban Studies.
- 11 Mineral identifications from Hyperspectral imagery
- 12 Python Programming for Hyperspectral data analysis.

Project

Subject Name	Code	Type of course	Credit	T+P+P	Prerequisite
Project	CUAS2025	Project	4	0+0+4	NIL

List of Projects:

1. Flood inundation mapping and Risk Evaluation using Geospatial Technology.
2. Landslide Hazard mapping using GIS and RS.
3. Land use and Land cover Dynamics using Earth observation Technology.
4. Mangrove change detection study using Multi-Temporal satellite data.
5. Solid waste management and shortest path identification using GIS Technology.
6. Watershed management using GIS Technology.
7. Identification Mineral mapping using GIS and RS.
8. Crop Health Monitoring using Geospatial Technology.
9. Identification of Hydrocarbon Locales using space inputs and Geospatial Technology.
10. Ground water exploration using GIS and RS Techniques.
11. Interlinking of River using GIS Technology.
12. Biomass estimation using Space Technology.
13. Land surface Temperature mapping using RS Technology.
14. Climate Change study using Earth Observation Technology.
15. Erosion and Accretion study of Shorelines and its impact in coastal habitats.

Students take up group projects and deal the following activities during the project. The project Report should contain below gate process.

Step 1: Functional Planning of the project and Objective Identification

Step 2: Literature Review

Step 3: Preparation of Flow chart for Methodology

Step 4: Layer creation and GIS analysis

Step 5: Identifying the possible Risks involved (specific to the project)

Step 6: Report writing

Each student is expected to do an individual project. At the completion of a project the student will submit a project report, which will be evaluated (end semester assessment) by duly appointed examiner(s). This evaluation will be based on the project report and a viva voce examination on the project. Student will be allowed to appear in the final viva voce examination only if he / she has submitted his / her project work in the form of paper for presentation / publication in a conference / journal and produced the proof of acknowledgement of receipt of paper from the organizers / publishers.

Domain
Architectural and Structural Design

Course Title	Type of course	T+P+PJ	Prerequisite
Architectural and Structural Design	Practice + Project	0+15+5	Nil

Courses Divisions:

DOMAIN: Architectural and Structural Design (0+15+5)					
Sl. No.	Code	Subject Name	T+P+P	Credits	Hrs.
1.	CUSD 2120	Critical thinking and presenting it with digital platform (AutoCAD leads to 3D base)	0+3+0	3	48
2.	CUSD 2121	Scope to enrich by exposing them to BIM modelling.	0+5+0	5	72
3.	CUSD 2122	Design and failure analysis of structure.	0+5+0	5	72
4.	CUSD 2123	Amalgamation of architecture and civil requirements using Generative Apps.	0+2+0	2	26
5.	CUSD 2124	Project	0+0+5	5	72
Total				20	

Objectives:

- To teach the Principles of architectural building design.
- To familiarize the student with practicing life in construction industry and orient their learnings towards practical application in the field.
- Make a difference with cutting edge technology.

Course Outcomes:

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Strong understanding of architectural design and scope for innovative ideas.	PO1 (3), PO3 (2),
CO3	Case study based practical solution with actual site visits/live buildings.	PO4[3]
CO2	Modelling of structural elements and failure analysis.	PO5 (3)
CO4	Time saving estimations/structural calculations using digital tool in sustainable manner.	PO7 [2]

Domain Syllabus

Critical thinking and presenting it with digital platform

Subject Name	Code	Type of course	Credit	T+P+P	Prerequisite
Critical thinking and presenting it with digital platform.	CUSD 2120	Practice	3	0+3+0	NIL

1.1 Introduction to Architectural Design

- 1.2 The need and scope of with basics of Design Principles
- 1.3 Ergonomic data and its application
- 1.4 Hands-on experience with designing their own house or hostel
- 1.5 The need of digital drive for 2D design expressions
- 1.6 Basics of AutoCAD, Conceptualization of Design: Own House drafting/Hostel
- 1.7 Addition of Creativity and modifying the design
- 1.8 Study the impact of Geological data, climatological data on design
- 1.9 Modification of design based on hydrology, soil, site conditions

- 1.10 Carving out a meaningful design in terms of architecture and structure.
- 1.11 Application of 2D design/ welcoming them in the world of 3D design
- 1.12 Basics of 3D concepts and commands
- 1.13 Practical techniques for saving area/cost
- 1.14 Presenting a wholesome idea before moving to BIM

Scope to enrich by exposing them to BIM Modelling

Subject Name	Code	Type of course	Credit	T+P+P	Prerequisite
Scope to enrich by exposing them to BIM modelling	CUSD 2121	Practice	5	0+5+0	NIL

- 2.1 Introduction to BIM modelling
- 2.2 The need and scope of with live examples
- 2.3 Ergonomic data and its application
- 2.4 Applying learnings to a bigger scale hotel/flat scheme/hostels
- 2.5 Incorporation of site factors
- 2.6 Realistic approach road and building bye-laws
- 2.7 The magic of Importing previous plans & reorient them to achieve larger scale in no time
- 2.8 Prepare specifications in BIM
- 2.9 Estimating all the quantities in a very short time
- 2.10 Concepts of CATIA
- 2.11 Layer wise calculation for pipelines, electrical ducts, AC units etc.
- 2.12 Introducing structural layers for design

2.13 Cross check with grid formation, foundation calculation & column orientation

2.14 Data and record for 3D design of individual aspects for the next level

Design and Failure Analysis of Structure

Subject Name	Code	Type of course	Credit	T+P+P	Prerequisite
Design and Failure Analysis of Structure	CUSD 2122	Practice	5	0+5+0	NIL

3.1 Introduction to steel structures. Modeling, Analysis and design of steel truss in as per AISC 360.

3.2 Linear buckling analysis of structures.

3.3 Introduction to PEB, Modelling PEB and assigning properties, load cases, design parameters, Analysis and extracting results.

3.4 Introduction to lattice steel structures. Modelling, Analysis and design of lattice steel structures.

3.5 Reading design results and optimizing the steel structure.

3.6 Modelling, Analysis and design of portal frame as per AISC 360 and ASCE 07-16

3.7 Introduction to nonlinear static analysis. Perform pushover analysis.

3.8 Introduction and modelling of composite deck platform

3.9 Modelling of deck slab and assigning section properties with releases

3.10 Assigning specifications and diaphragm to the structures

3.11 Define and calculate seismic and wind loads as per ASCE 07 and ATC hazards

3.12 Define load cases and load combinations, Deflection check concept, floor vibration analysis.

- 3.13 Analyse composite structure and extract results.
- 3.14 How to import CAD MODEL, Design and analysis of multi storey residential building based on different loading criteria (based Code on IS456:2000), Creating plate elements and shear walls.
- 3.15 Design and analysis of frame structures based on different loading criteria (based Code on IS456:2000)
- 3.16 Design, analysis of Foundations (Isolated footing and Combined footing based on code IS456:2000)
- 3.17 Design, analysis of structural elements e.g. Beam, column, Slab (one way and Two way) (based Code on IS456:2000 and BS8007)
- 3.18 Error and warning analysis, Report generation

Amalgamation of Architecture and Civil Requirements using Generative Apps

Subject Name	Code	Type of course	Credit	T+P+P	Prerequisite
Amalgamation of Architecture and Civil Requirements using Generative Apps	CUSD 2123	Practice	2	0+2+0	NIL

- 4.1 Optimisation of steel cost- using permutation & combination of steel/foundation type or small changes in architectural design
- 4.2 Segregated services
- 4.3 Revising PERT/CPM paths
- 4.4 Addition of storage spaces
- 4.5 Façade treatment/modification
- 4.6 Inclusion of basement/parking areas/bunkers

- 4.7 Reduction of construction cost
- 4.8 Site development and slope calculation (in brief)
- 4.9 Mitigating hydrological impacts on difficult sites

PROJECT

Subject Name	Code	Type of course	Credit	T+P+P	Prerequisite
Project	CUSD 2124	Project	5	0+0+5	NIL

List of Projects:

1. Small scale (initial) with interior
 - 1.a. Hostel room
 - 1.b. Individual home
 - 1.c. Duplex bungalow
 - 1.d. Shop
 2. Live/ ongoing Project/Turn key basis
 - 2.a. Multi storey building
 - 2.b. Hospital
 - 2c. Hostel
 - 2.d. Office Building
 3. Highway geometry design
 4. Design and analysis industrial ware house
 5. Design and analysis of auditorium with proper load calculation, load cases, load combination based on code (IS 456:2000 and BS 8007).
 6. Design of bridge deck slab
-
1. Gate Process for Project
 1. Gate 0: Project Identification
 2. Gate 1: Planning

3. Gate 2: Modelling
 4. Gate 3: Design and simulation
 5. Gate 4: Documentation
-

Domain

CONSTRUCTION PLANNING, MONITORING AND PROJECT MANAGEMENT

Course Title	Type of course	T+P+PJ	Prerequisite
Construction Planning, Monitoring and Project Management	Theory + Practice + Project	4+6+6	Nil

DOMAIN: Construction Planning, Monitoring and Project Management (4+6+6)					
Sl. No.	Code	Subject Name	T+P+P	Credits	Hrs.
1.	CUCP2110	Study of Drawings and Plan	2+1+0	3	25
2.	CUCP2111	Project Scheduling & Management	0+2+0	2	36
3.	CUCP2112	Site Study and Study on Contract Laws	2+1+0	3	50
4.	CUCP2113	Concepts of Quality Control and Checking	0+1+1	2	45
5.	CUCP2114	Quantity Estimation and Equipment Management	0+1+1	2	45
6.	CUCP2115	Site Supervision Project	0+0+4	4	48
Total				16	

Objectives:

- Students will be able to work with the latest trend of the construction industry needs.
- Understand different methods of project delivery and the roles and responsibilities of all constituents involved in the design and constant process.
- Give the students experience, supervision and direction in recognizing and applying the concepts of project management and construe planning.

Course Outcomes:

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Students will apply knowledge and plan various complex project problems relating to advanced building technology with trust.	PO1 (3), PO2 (2), PO4 (1)
CO2	Students will be able to churned as Construction Manager, Project Engineer. Site Supervisor and Project Consultant with critical thinking and skills	PO9 (3), P011 (2),
CO3	Maintain and develop the ability to put their knowledge of theory into practical problems using forms of construction focusing to society and environment.	PO6 (3), PO7 (2)

PHASE-I STUDY OF DRAWINGS AND PLAN

(2+1+0)

Inputs required completing the project

1. To ensure the student to read about the technical terms in various building drawings.
2. To give hands on practice to the students in preparing blue prints of a proposed construction.

To fulfill the requirement of the INPUTS the candidate has to learn the following steps:

Types of input	Type of study
Preparation of Site Map • Conduct a site survey to gather information about the topography, soil conditions, vegetation, and existing structures on the site. • Analyze the site data to identify potential challenges and opportunities for the project. This may include assessing the suitability of the site for the proposed development,	Theory + Drawing Practice

identifying potential hazards, and determining the most appropriate location for key features such as buildings, roads, and utilities. • Develop a conceptual site plan that includes the proposed layout of the development, including the location of buildings, roads, sidewalks, and other infrastructure. • Prepare detailed engineering plans and specifications for the site, including grading plans, drainage plans, and utility plans.	
Preparation of Electrical and Plumbing drawing • Review the architectural plans and specifications to understand the electrical and plumbing requirements of the project. • Develop a rough electrical layout, which includes the location of electrical panels, switches, outlets, and lighting fixtures. • Develop a rough plumbing layout, which includes the location of plumbing fixtures, water supply, and drainage lines. • Prepare single line diagrams, load schedules, and other technical documents as needed. • Use the electrical and plumbing drawings as a guide during the construction phase, to ensure that the project is built according to the approved plans.	Theory + Drawing Practice
Preparation of Bar Bending Schedule and Carpentry drawing • Introduction to Bar Bending Schedule and Carpentry Drawing • Basic concepts of reinforcement and carpentry work • Reading and interpreting architectural and structural drawings • Understanding the different types of reinforcement and carpentry elements • Calculating the quantities of reinforcement and carpentry materials • Preparing the Bar Bending Schedule and Carpentry Drawings	Theory + Drawing Practice

• Site execution and quality control of reinforcement and carpentry work • Safety precautions in reinforcement and carpentry work	
Structural Detailing of building components • Introduction to structural detailing and its importance in building design • Basic concepts of structural steel and reinforced concrete detailing • Reading and interpreting architectural and structural drawings • Detailing of structural steel members, such as beams, columns, and bracings • Detailing of reinforced concrete members, such as beams, columns, slabs, and foundations • Connection design and detailing of structural steel and reinforced concrete members • Standards and codes for structural detailing	Theory + Drawing Practice
Preparation of Building layouts	Field Work
Report Preparation	Report
Review	Presentation

Phase II PROJECT SCHEDULING & MANAGEMENT

(0+2+0)

Inputs required completing the project

1. WBS
2. Equipment Scheduling
3. Labour Scheduling
4. Material Scheduling
5. Financial Resource allocation.

To fulfill the requirement of the INPUTS the candidate has to learn the following steps:

TYPES OF INPUT	TYPE OF STUDY
Preparation of Functional Planning	Practice
Detail analysis report about the information of an equipment	Practice

Preparation of datasheet of construction labours	Practice
Preparation of materials list required for the project	Project
Scheduling the resources of the project	Project
Report Preparation	Report
Review	Presentation

PHASE III SITE STUDY AND STUDY ON CONTRACT LAWS (2+1+0)

Inputs required completing the project

- To learn about the methods of marking layouts and pre construction process.
- To study the various types of construction contracts and their legal aspects and provisions.

To fulfill the requirement of the INPUTS the candidate has to learn the following steps:

Types of input	Type of study
Marking Layouts of proposed plan.	Field work
Preparation of Site Map	Surveying Practice
Design of contract documents • Introduction to contract documents and the design-bid-build process • Types of contracts and their characteristics • Basic concepts of legal and contract principles • Preparation and interpretation of specifications • Preparation of contract drawings and documents • Cost estimation and budgeting • Bid evaluation and contract award • Contract administration and change order management • Risk management and insurance	Theory+ Class Room Practice

• Case studies and examples of contract documents	
Tenders Prequalification–Bidding–Accepting–Evaluation of Tender from Technical, Contractual and Commercial Points of View. • Introduction to tenders and prequalification • Types of tenders and procurement methods • Basic concepts of project management • Preparation of tender documents • Prequalification criteria and evaluation • Evaluation of tenders and bid analysis • Contract negotiation and award • Compliance and ethics in tenders • Case studies and examples of tenders and prequalification	Theory+ Class Room Practice
• Legal Requirements • Insurance and Bonding • Laws Governing Sale • Purchase and Use of Urban and Rural Land–Land Revenue Codes • Tax Laws	Theory+ Class Room Practice
Assessment (Lab)	Examination

PHASE IV CONCEPTS OF QUALITY CONTROL AND CHECKING (0+1+1)

Inputs required completing the project

- To enlighten the student with the tools of total quality management process.
- To give hands on practice to the students in preparing quality assessment schedules and inspection check lists

- Carryout the field and laboratory tests for quality assessment in construction industry.

To fulfill the requirement of the INPUTS the candidate has to learn the following steps:

TYPES OF INPUT	TYPE OF STUDY
Generation of sample QC inspection Check list for Industrial building.	Practice
Generation of sample QC inspection Check list for Institutional building.	Practice
Generation of sample QC inspection Check list for Apartment building.	Practice
Generation of sample QC inspection Check list Road Structures.	Practice
Report Preparation.	Report
Review.	Presentation

PHASE V QUANTITY ESTIMATION AND EQUIPMENT MANAGEMENT (0+1+1)

Inputs required completing the project

- Identify the particular equipment to be used in the construction project they will undertake.
- Prepare plans for economic management by estimating the costs of the total construction works.
- To appraise the student with the aspects related to functioning, operation and maintenance of various construction equipment.

To fulfill the requirement of the INPUTS the candidate has to learn the following steps:

Types of input	Type of study
Planning & Selection of Equipment.	Practice (Self-Learning)
Economics of Equipment and procurement techniques.	Practice (Self-Learning)

Estimation for total construction cost.	Practice (Self-Learning)
Estimation for total labor and material cost.	Practice (Self-Learning)
Preparation of BOQ.	Estimator 2.0 (Lab)
Review	Presentation

PHASE VI SITE SUPERVISION PRACTICES

(0+0+4)

Inputs required completing the project

1. To demonstrate supervision of concreting task such as form finish concrete structure, complex structure, slip form concreting and concreting in extreme weather condition.
2. Supervise, monitor and evaluate performance of subordinates at workplace.
3. To study about the processes of various stages of construction on the field.

To fulfill the requirement of the INPUTS the candidate has to learn the following steps:

Types of input	Type of study
Supervise and monitor the execution of System/shuttering Carpentry works.	Practice (Self-Learning)
Supervise and monitor the execution of concreting works.	Practice (Self-Learning)
Supervise and monitor the execution of bar bending works.	Practice (Self-Learning)
Supervise and monitor the execution of scaffolding works.	Practice (Self-Learning)
Supervise and monitor the daily labour works (DPR).	Practice (Self-Learning)
Assessment (Review)	Presentation

REPORT WRITING

Inputs required completing the project

1. Functional Planning of the project
2. Identification of Objects
3. Literature Review
4. Preparation of Flow chart for Methodology
5. Sequences of construction process
6. Identifying the possible Risks involved (specific to the project)
7. Result and Discussion
8. Conclusion
9. Recommendation
10. References

Each student is expected to do an individual project. At the completion of a project the student will submit a project report, which will be evaluated (end semester assessment) by duly appointed examiner(s). This evaluation will be based on the project report and a viva voce examination on the project. Student will be allowed to appear in the final viva voce examination only if he / she has submitted his / her project work in the form of paper for presentation / publication in a conference / journal and produced the proof of acknowledgement of receipt of paper from the organizers / publishers.

.....

Domain Track Title: Renewable Energy Applications

Track Total Credits (4-8-10): 22 Credits

Courses Division:

- 1. CURE2190 Materials for Renewable Energy applications (1-1-0)**
- 2. CURE2191 Renewable Energy Technology for Industrial Process (1-2-0)**
- 3. CURE2192 Micro-grid Design & Implementation (0-2-0)**
- 4. CURE2193 Hybrid Renewable Energy Systems (1-2-0)**
- 5. CURE2194 Solar Off-grid Entrepreneur (1-1-0)**
- 6. CURE2195 project (0-0-6)**
- 7. CURE2196 Internship (0-0-4)**

Domain Track Objectives:

The objectives of these subjects are:

1. To gain the knowledge on different types of materials used in Renewable Energy.
2. To understand the importance of Renewable Energy technology and its applications.
3. To know the applications of solar thermal technology.
4. To become an expert in Entrepreneurship.

Domain Track Course outcomes

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Able To gain the knowledge on different types of materials used in Renewable Energy.	PO1 (3)
CO3	To know the applications of solar thermal technology, off-grid , on-grid and hybrid renewable energy systems.	PO2(3), PO5(1)
CO7	To become an expert in Entrepreneurship.	PO8(3),PO7(2)

1. Material for Renewable Energy application (30 hrs)

- 1.1 Basic fundamentals of different types semiconductors (Energy band, charge carriers and their motion, generation, recombination, doping)
- 1.2 Practice: Crystal structure, phase identification and crystallite size determination of PV materials by XRD (using Biovia MS and phase identification by using relevant software)
- 1.3 Photovoltaic Cell - Construction & Working (Si based)
- 1.4 Practice: UV visible analysis of photovoltaic material
- 1.5 Concept of various types PN junction.
- 1.6 Practice: Measurement of photo luminescence (PL) behaviour of photovoltaic material
- 1.7 Role of materials for sustainable development of next generation photovoltaic cells
- 1.8 Practice: To study crystallites (grain) size and strain through *Williamson-Hall plot* method
<https://www.youtube.com/watch?v=LJ9h77fN4-E&t=1308s>
- 1.9 Efficiency calculation of solar cell
- 1.10 Practice: To determine the resistivity of semiconductors by Four probe Method.
<http://vlab.amrita.edu/?sub=1&brch=282&sim=1512&cnt=1>
- 1.11 Nano-Photovoltaic (Graphene/CNT, ZNO, TiO₂)
- 1.12 Practice: Study of Hall effect (Determination of nature of charge carriers in a semiconductor)
<http://vlab.amrita.edu/?sub=1&brch=282&sim=879&cnt=4>
- 1.13 Composite materials for solar cell (Graphene/Al, TiO₂-SiO₂ composite for solar cell)
- 1.14 Perovskite based solar cell (transition metal doped PbTiO₂)
- 1.15 Dye-sensitized solar cells
- 1.16 Materials (Al/hybrid glass-carbon fiber) for wind energy conversion

Text Book:

1. Vincent, D. , Materials for Sustainable Energy, Nature publishing group, 2010.
2. Paranthaman, M. Parans, Wong-Ng, Winnie, Bhattacharya, Raghu N (Eds.), Semiconductor Materials for Solar Photovoltaic Cells, Springer, 2015.

Reference Book:

1. Sabu, T., El HadjiMamour, S., Nandakumar, K., Samuel, O., Jihuai, W., Nanomaterials for Solar Cell Applications, Elsevier, 2019.
2. Peter, P. Rogers, Kazi F. Jalal, John A. Boyd, An introduction to sustainable development, Glen Educational Foundation, 2008.

2. Renewable Energy Technology for Industrial Process (48 hrs)

- 2.1 Relevance of economic and financial viability evaluation of renewable energy technologies, Renewable Energy Policies of India and in the state of Odisha
- 2.2 Practice: Site visit for acquire knowledge on different renewable energy technologies and it's system
- 2.3 Basics of light to energy conversion and Concept on solar PV
- 2.4 Practice: Measurements and estimation of solar radiation
- 2.5 Concept of mono-crystalline, poly-crystalline, amorphous
- 2.6 Practice: Identify and specify different types of components used in a solar PV system
- 2.7 New generation of Solar cell, working principle and applications
- 2.8 Practice: Simulation of solar cell by using PVSOL software
- 2.9 Effects of parameters on PV module power and efficiency

- 2.10 Practice: VI characteristics of solar cell/module
- 2.11 Concept on Concentrated solar thermal (CST)
- 2.12 Practice: Temperature tracking of solar cell/module
- 2.13 Concentrated solar power (CSP), new technology of solar thermal
- 2.14 Practice: Performance of Solar PV module at varying tilt angle
- 2.15 Concept of wind energy, Basic laws and efficiency limit for wind energy conversion
- 2.16 Practice: Modelling of solar cooker
- 2.17 Concept of aerodynamics effects
- 2.18 Practice: Modelling of solar flat plate collector
- 2.19 description of horizontal and vertical axis wind turbine
- 2.20 Practice: Generation of electricity by wind machines
- 2.21 Concept on Biomass, Electricity generation from biomass.
- 2.22 Practice: Maximum power point tracking of a wind turbine
- 2.23 Practice: Performance testing of bio diesel in VCR machine

Text Books:

- 4. S. S. Das, D. D. Behera, and N. C. Giri, Clean Energy Applications in Modern World, Notion Press, ISBN: 9781638069560, 2021.

3. Micro-grid Design and Implementation (36 hrs)

- 3.1 Practice: Site survey (1 kW or 1MW)
- 3.2 Practice: Sizing of micro grid system (1kW/1MW)
- 3.3 Practice: Single line diagram of micro grid system
- 3.4 Practice: Identify and specify different components used in a micro grid system
- 3.5 Practice: Connection practice of solar modules in a micro grid system
- 3.6 Practice: Designing of micro grid system
- 3.7 Practice: Analysis of micro grid system
- 3.8 Practice: Designing of micro grid system with battery storage
- 3.9 Practice: Performance calculation of micro grid system
- 3.10 Practice: Connection practice of CCR/Inverter in a micro grid system
- 3.11 Practice: Test, record and verify the power quality of a micro grid system
- 3.12 Practice: O & M of micro grid system

Text Books:

1. Suneal Deambi, Photovoltaic System Design: Procedures, Tools and Applications, CRC Press, 2018.
2. Miguel Castilla, Antonio Carlos Zambroni de Souza, Microgrids Design and Implementation, Springer, 2019.

Reference Books:

4. Hybrid Renewable Energy System (48 hrs)

- 4.1 Global scenario of Hybrid renewable energy system, integrated renewable energy systems with input sources
- 4.2 Practice: Modelling of renewable energy systems
- 4.3 integrated renewable energy systems with input sources
- 4.4 Practice: Connection practice of Solar PV-T System
- 4.5 Selection of technology and components for hybrid renewable systems.
- 4.6 Practice: Designing of solar PV system (On-grid/Off-grid)
- 4.7 Concept of hybrid solar PVT system
- 4.8 Practice: Designing of hybrid solar-thermal system
- 4.9 Selection of Components for Hybrid solar PV-T system
- 4.10 Practice: Analysis of hybrid solar-thermal system
- 4.11 Synchronization process of renewable systems.
- 4.12 Practice: Connection practice of PV-wind system
- 4.13 Operation of hybrid PV and wind system
- 4.14 Practice: Modelling of wind power system
- 4.15 Concept of hybrid PV and wind system and its components
- 4.16 Practice: Demonstration of Load curve in the plant
- 4.17 Load curve
- 4.18 Practice: Study the dynamic behavior of wind turbines
- 4.19 Concept of Hybrid PV and hydro system and its components
- 4.20 Practice: Modelling of hydro power system
- 4.21 Concept of hybrid PV and Biomass system and its components
- 4.22 Practice: Chemical composition of biomass system
- 4.23. Practice: Emission testing of bio diesel/bio ethanol in gas analyzer

Text Books:

1. S. Sukhatme and J. Nayak: Solar Energy: Principle of Thermal collection and storage, Third Edition (Tata McGraw-Hill, 2008)
2. C. S. Solanki: Solar Photovoltaic – Fundamentals, Technologies and Applications, PHI.

Reference Books:

5. Solar Off-grid Entrepreneur (30 hrs)

- 5.1 MNRE schemes and state wise subsidy process
- 5.2 Practice: Identify and specify different types of Solar PV Off grid products
- 5.3 Cost of different solar off grid systems components
- 5.4 Practice: Costing sheet preparation
- 5.5 Selection criteria of suitable components
- 5.6 Practice: Proposal preparation with payment terms and condition
- 5.7 Assessment of business development
- 5.8 Practice: Analysis and assessment of project cost
- 5.9 Economic profile and power consumption trends
- 5.10 Practice: Customer financial strength calculation
- 5.11 Government and private bank funding systems
- 5.12 Practice: Identify the customer requirements for solar home lightening systems
- 5.13 Solar off grid system manufacturers and suppliers
- 5.14 Right equipment should be installed in right place
- 5.15 Attend and resolve customer queries
- 5.16 Entrepreneurship skill

Text Books:

- 1. Rameshwari Pandya, Skill Development and Entrepreneurship in India, 2016.
- 2. Joseph P. Oconneor, Off Grid Solar, Second edition, Old Sequoia Publishing, 2016.
- 3. Poornima Charantimath, Entrepreneurship Development and small Business Enterprises, Third edition, Pearson, 2018.

Reference Books:

- 1. C. S. Solanki: Solar Photovoltaic – Fundamentals, Technologies and Applications, PHI Learning Pvt. Ltd., 2011.
- 2. Michael Boxwell -- Solar Electricity Handbook - 2014 Edition: A Simple Practical Guide to Solar Energy.

Domain Track Course outcomes:

Upon successful completion of this subject, students should be able to

- 1. Know in depth of materials of Sustainable energy products and it's applications.
- 2. Explain basics of Renewable energy technologies and it's applications.
- 3. Increased awareness about solar thermal technology.
- 4. Become industry-ready in Entrepreneurship.

Domain Syllabus:

Session Plan for the Entire Domain:

1. Material for Renewable Energy Application (30 hrs)

Session 1. Basic fundamentals of different types semiconductors (Energy band, charge carriers and their motion, generation, recombination, doping)

<https://www.youtube.com/watch?v=ethnHSgVbHs>

<https://www.youtube.com/watch?v=Yu2YpVtuOds>

Session 2. Practice: Crystal structure, phase identification and crystallite size determination of PV materials by XRD (using Biovia MS and phase identification by using relevant software)

<http://vlab.amrita.edu/?sub=1&brch=282&sim=370&cnt=1>

Session 3 .Photovoltaic Cell - Construction & Working (Si based)

<https://www.youtube.com/watch?v=sXcsKzJylrA>

Session 4. Practice: UV visible analysis of photovoltaic material

<https://www.youtube.com/watch?v=s5uIVQGFDE4>

<https://www.youtube.com/watch?v=a9fSg2TREag>

Session 5. Concept of various types PN junction

<https://www.youtube.com/watch?v=4SlfaocMfdA>

Session 6. Practice: Measurement of photoluminescence (PL) behaviour of photovoltaic material

<https://www.youtube.com/watch?v=GqivfoW32rg&t=7s>

<https://www.youtube.com/watch?v=uZqXXafYoME>

Session 7. Role of materials for sustainable development of next generation photovoltaic cells

<https://www.youtube.com/watch?v=HEgYLOoE5MQ&feature=youtu.be>

Session 8. Practice: Make a solar cell TiO_2 /Raspberry based

<https://www.youtube.com/watch?v=WHTbw5jy6qU>

Session 9. Efficiency calculation of solar cell

<https://www.youtube.com/watch?v=IxFIewx54Ok>

<https://www.youtube.com/watch?v=IkVLQALtdQw>

Session 10. Nano-Photovoltaic (Graphene/CNT, ZNO, TiO_2)

<https://www.youtube.com/watch?v=j4u09hi9DXI&t=150s>

<https://www.youtube.com/watch?v=BKomGuejwRA&t=55s>

<https://www.youtube.com/watch?v=Y2vvTPc30fE>

Session 11. Practice: Calculate the sun position at a given place and time and thereby study the variation in power production in a solar photovoltaic panel with respect to the change in incidence angle

<http://vlab.amrita.edu/?sub=77&brch=298&sim=1629&cnt=1>

Session 12. Composite materials for solar cell (Graphene/Al, TiO_2 - SiO_2 composite for solar cell)

<https://www.youtube.com/watch?v=BKomGuejwRA>

<https://www.youtube.com/watch?v=qDviZVbf7AA>

<https://www.youtube.com/watch?v=qvxH0RuaTpY&feature=youtu.be>

Session 13. Practice: Specific charge/discharge characteristics of a Lithium- ion (Li^+ ion) battery

<http://vlab.amrita.edu/?sub=77&brch=270&sim=1540&cnt=1>

Session 14. Perovskite based solar cell (transition metal doped PbTiO_2)

<https://www.youtube.com/watch?v=NSItaUCG46E>

Session 15. Dye-sensitized solar cell

<https://www.youtube.com/watch?v=8hertoGXWtE>

https://www.youtube.com/watch?v=CWEKfxBc4_8

Session 16. Materials (Al/hybrid glass-carbon fiber) for wind energy conversion.

<https://www.youtube.com/watch?v=0uLmVDTwsno>

<https://www.youtube.com/watch?v=xyjLd957ITk>

2. Renewable Energy Technology for Industrial Process (48 hrs)

Session 18. Relevance of economic and financial viability evaluation of renewable energy technologies

https://youtu.be/X9x_fSU2a6U

Session 19. Practice: Site visit for acquire knowledge on different renewable energy technologies and it's system

Session 20. Basics of light to energy conversion and Concept on solar PV

<https://youtu.be/vzBkgMONIFo>

<https://youtu.be/1gta2ICarDw>

Session 21. Practice: Measurements and estimation of solar radiation

Session 22. Concept of mono crystalline, poly crystalline, amorphous

<https://youtu.be/Fip520UdeNU>

Session 23. Practice: Simulation of solar cell

Session 24. New generation solar cell, working principle and applications

https://youtu.be/8t_DFI4O6v4

Session 25. Practice: Identify and specify different types of components using in a solar PV system

Session 26. Practice: VI characteristics of Solar cell/module

Session 27. Working principle and applications

<https://youtu.be/ZYO83TkM0To>

Session 28. Practice: Temperature tracking of solar cell/module

Session 29. Effects of parameters on PV module power and efficiency

<https://youtu.be/JTDSPjDSrS8>

Session 30. Practice: Performance of Solar PV module at varying tilt angle

Session 31. Concept on Concentrated solar thermal (CST)

<https://youtu.be/tdivW7inP0k>

[HAND-NOTES-ON-SOLAR-THERMAL-ENGINEERING-pdf](#)

Session 32. Practice: Modelling of solar cooker

<https://www.youtube.com/watch?v=WPwDwjsAp4U&t=84s>

Session 33. Concentrated solar power (CSP)

<https://youtu.be/N1-zjbRqYXk>

Session 34. Practice: Modelling of solar flat plate collector

<https://www.youtube.com/watch?v=XWvr3OT1E1c>

<https://www.youtube.com/watch?v=s-Ysg6Xaf3c>

<https://www.youtube.com/watch?v=70Z5UNoywyE&t=223s>

Session 35. Concept of wind energy, Basic laws and efficiency limit for wind energy conversion.

https://www.youtube.com/watch?v=qSWm_nprfqE

Session 36. Practice: Generation of electricity by wind machines

Session 37. Concept of aerodynamics effects,description of horizontal and vertical axis wind turbine

<https://www.youtube.com/watch?v=65k2Nh8YHFI>

<https://www.youtube.com/watch?v=A-k2YGrpATo&t=13s>

Session 38. Practice: Maximum power point tracking of a wind turbine

Session 39. Practice: Performance testing of bio diesel in VCR machine

https://www.youtube.com/watch?v=b1PbQ7jjVVM&list=PLniBGjZYcl478NRpoWh-YF_f2E90HZzda

<https://www.youtube.com/watch?v=rrldwVGmmy4&t=161s>

https://www.youtube.com/watch?v=KZ35K05SA7g&list=PLniBGjZYcl478NRpoWh-YF_f2E90HZzda&index=7

3. Micro grid Design and Implementation (36 hrs)

Session 41. Practice: Site survey (1 kW or 1MW)

Session 42. Practice: Sizing of micro grid system (1kW/1MW)

Session 43. Practice: Single line diagram of micro grid system

Session 44. Practice: Identify and specify different components used in a micro grid system

Session 45. Practice: Connection practice of solar modules in a micro grid system

Session 46. Practice: Designing of micro grid system

Session 47. Practice: Analysis of micro grid system

Session 48. Practice: Designing of micro grid system with battery storage

Session 49. Practice: Performance calculation of micro grid system

Session 50. Practice: Connection practice of CCR/Inverter in a micro grid system

Session 51. Practice: Test, record and verify the power quality of a micro grid system

Session 52. Practice: O & M of micro grid system

4. Hybrid Renewable Energy Systems (48 hrs)

Session 53. Global scenario of Hybrid renewable energy system, integrated renewable energy systems with input sources

https://youtu.be/j_fViOJbJLk

<https://youtu.be/TD0jZciQcaE>

Session 54. Practice: Modelling of renewable energy systems

Session 55. Selection of technology and components for efficient hybrid renewable systems

<https://youtu.be/ALsOcGkrev0>

Session 56. Practice: Connection practice of Solar PV-T System

Session 57. Concept on hybrid solar PVT system and its components

<https://youtu.be/hseYnkOQghI>

Session 58. Practice: Designing of solar PV system (On-grid/Off-grid)

Session 59. Synchronization process of renewable systems

https://youtu.be/COz_w5l0nOw

Session 60. Practice: Designing of hybrid solar-thermal system

Session 61. Operation of hybrid solar-thermal system

<https://youtu.be/Lm7kmCaoeC4>

Session 62. Practice: Analysis of hybrid solar-thermal system

Session 63. Concept of hybrid PV and wind system and its components

<https://youtu.be/rPm-JHeD5Z0>

Session 64. Practice: Connection practice of PV-wind system

<https://www.youtube.com/watch?v=elZsUKcq3tw&t=9s>

Session 65. Operation of hybrid PV and wind system

<https://youtu.be/s458bCI8u2Q>

Session 66. Practice: Modelling of hybrid PV and wind power system

<https://www.youtube.com/watch?v=gzwDdo3iuSY>

Session 67. Load curve

https://youtu.be/OQsk_4oqFmc

Session 68. Practice: Demonstration of Load curve in the plant

<https://www.youtube.com/watch?v=b-ka2qObhzk>

Session 69. Concept of hybrid PV and hydro system and its components

<https://youtu.be/9qu5ryJBIIIE>

Session 70. Practice: Modelling of hydro power system

<https://www.youtube.com/watch?v=gdOaG8cKLuw>

Session 71. Concept of hybrid PV and Biomass system and its components

<https://youtu.be/XboxQHJPD4>

Session 72. Practice: Chemical composition of biomass system

Session 73. Practice: Study the dynamic behavior of wind turbines

<https://www.youtube.com/watch?v=aSwGUVqrBMQ>

Session 74. Practice: Emission testing of bio diesel/bio ethanol in gas analyser

5. Solar Off-Grid Entrepreneur (36 hrs)

Session 75. MNRE schemes and state wise subsidy process

<https://www.youtube.com/watch?v=xKxrkht7CpY>

<https://www.youtube.com/watch?v=xIXZmNUYcfI>

Session 76. Practice: Identify and specify different types of Solar PV Off grid products

<https://www.youtube.com/watch?v=JJYyD3oNd8w>

Session 77. Cost of different solar off grid systems components and Selection criteria of suitable components.

<https://youtu.be/bxFX7C383ig>

Session 78. Practice: Costing sheet preparation

Session 79. Selection criteria of suitable components

<https://youtu.be/HLV07G37rh0>

Session 80. Practice: Proposal preparation with payment terms and condition

Session 81. Assessment of business development

https://youtu.be/RgNV2D2c5_w

Session 82. Practice: Analysis and assessment of project cost

Session 83. Economic profile and power consumption trends

https://youtu.be/L5v9jt4__ho

Session 84. Practice: Customer financial strength calculation

Session 85. Government and private bank funding lightening systems

<https://youtu.be/dJLbD7f5cDk>

Session 86. Practice: Identify the customer requirements for solar home lightening systems

Session 87. Solar off grid system manufacturers and suppliers

<https://youtu.be/2R3ahfcB68g>

Session 88. Right equipment should be installed in right place

<https://youtu.be/cG3bkKJGzoc>

Session 89. Attend and resolve customer queries

https://youtu.be/hilb4v_dnck

Session 90. Entrepreneurship skill

https://youtu.be/CFtN_S1ekF4

List of Projects/papers/jobs/products to be done in domain:

1. Study on Perovskite based material for the application of Solar cell
2. Preparation of solar based material and it's characterization
3. Efficiency enhancement of solar cell using rare earth materials
4. Design and development of solar powered lamps/street lights.
5. Design and development of solar auto tracking system
6. Design and development of solar powered water pumping system
7. Design and development of solar operated grass trimmer
8. Design and development of solar powered pesticide sprayer
9. Design and development of solar powered leaf plate making machine
10. Design and development of solar powered bicycle
11. Design and development of solar powered sugarcane juice machine
12. Design and fabrication of solar dryer
13. Design and development of solar parabolic trough concentrator for water heating purpose
14. Design and development of solar cooker (box type or dish type)
15. Design and development of solar powered poly house system
16. Design and development of solar desalinization system
17. Design and development of solar operated blacksmith blower
18. Design and development of portable solar mobile charging station
19. Design and development of solar tree
20. Design and development of evacuated type of solar collector of water heating system
21. Design and development of torque control of wind turbine using energy analysis method
22. Analysis and design of generator side control of wind turbine
23. Design and development of micro-hydro power plant
24. Design and development of wind power system
25. Performance testing and comparison test of bio diesel in VCR Engine

Operation and Maintenance of Electrical Grid System & Transformers

Domain Name	Code	Type of course	T-P-P	Pre-requisite
Operation and Maintenance of Electrical Grid System & Transformers	EGCU2090	Theory + Practice + Project	6-14-4	Nil

- Track Total Credits:**
Theory + Practice + Project: [6+14+4] (24)
- Domain objectives :**

A] To create technically trained manpower readily available for recruitment to the power/energy Companies & Transformer Manufacturing firms in Electrical Sector.

B] Develop digital prototypes of the products and validate them and innovate for design efficiency

3. Domain Outcomes:

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Able to gain Knowledge of making commercially used distribution transformer	PO1 (3), PO3(2)
CO3	Able to identify and resolve the problem in manufacturing of transformers.	PO2(3), PO5(1)
CO4	Able to develop skill on design of transformer and report generation of making commercially used distribution transformer	PO8(3), PO4(2)

4. **Domain Structure:** The Domain will consist of following components and these components will be reflected in the grade sheet.

- a. CUEG 2090: Introduction, Power Scenario, Power Quality & Faulty clearance, [1-1-0]
- b. CUEG 2091: Switchyard & substation Networks, [1-2-0]
- c. CUEG 2092: Protection scheme & Switchgear, [1-2-0]
- d. CUEG 2093: Cable system & Testing, [1-2-0]
- e. CUEG 2094: Power Markets, [1-0-0]
- f. CUEG 2095: Grid Safety, [0-2-0]
- g. CUEG 2096: Transformer Manufacturing, [1-5-0]
- h. CUEG 2097: Project, [0-0-4]

The Domain will be delivered through case studies, assignments and product development
Product Development Stack :

1. Distribution Transformer (Full product)
2. Smart Energy Meter (Modular Platform design and electric power train design , BIW)

5. **Session Plan for the Entire Domain:**

Course 1: Generation, Transmission & Distribution scenario in India

[Interactive + Modelling], [1-1-0], [20 Hrs]

1. Types of generation: Conventional and Non-conventional,
2. Thermal Power Plant, Hydro Power Plant,
3. Gas Power Plant, Nuclear Power Plant,
4. Co-generation Various sources Non-conventional Energy Sources.
5. Role of computers in distribution system planning-Load modelling
6. characteristics: definition of basic terms and loss factor
7. Classification of loads and their characteristics.
8. Distribution Feeders and Substations: Design consideration of Distribution feeders:
Radial and loop types of primary feeders, voltage levels, and feeder-loading.

Video Links

1. https://www.youtube.com/watch?v=lh5_7sHyLU4
2. [Hydro Power](#)
1. [Gas Power Plant](#)
2. [Nuclear Power Plant](#)
3. 1.4.1 [Co-Generation](#)

Practice

1. Load Modeling
2. Substation Modeling

Course 2: Switchyard/Substation Types

[Lab Practice in Own Distribution Network, Modelling], [1-2-0], [20 Hrs]

1. Single line diagram/equipments [Equipments-transformer, CB, fuse etc.]
2. Relays, Relaying schemes and auxiliaries Wiring Diagram
3. Layout of Sub-Station(33/11KV S/S, 220/33KV S/S)
4. Indoor and outdoor busbars — bus-bar mountings and their clearances.
5. Designing Electrical Transmission Tower Types and Design

Video Links

2.3.1 [Substation layout](#)

2.5.1 [Transmission Tower Design](#)

Practice

1. Design 33/11 KV substation
2. Single Line layout of substation

Course 3: System Protection & Auxiliaries

[Field Visit+ Lab Practice in Own Distribution Network] [1-2-0] [20 Hrs]

1. CT & PTs, Local & Back-up Protection. Protection Schemes,
2. New Generation Relays, Different types of indoor and outdoor CB, Breaker Maintenance,
3. Lightning Arrestors/Surge Arrestors, Isolators And Insulators,
4. Grounding system, Auxiliary System in Switchyard/Substation

Video Links

3.1.1 [CT, PT, Relay](#)

3.2.1 [Distance Protection](#)

3.4.1 [Grounding/Earthing](#)

Practice

1. Design Over current Protection for sub-station Feeder.
2. Measuring Earth Insulation Resistance

Course 4: Cables in Electrical System

[Visit to Standard Testing Lab, Workshop Practice], [1-2-0], [20 Hrs]

1. Modern trends in Underground Cabling Basic Concepts,
2. Materials Used in Cables, Conductors,
3. Testing and Commissioning of cables,

Video Links

4.1.1 [Under Ground Cable](#)

4.3.1 [Cable Laying](#)

Practice

1. IR Test of Cable
2. Cable Jointing

Course 5: Power System Market, Markets For Electrical Energy, Energy Conservation [Interactive], [1-0-0] [3 Hrs]

1. Electricity Business
2. Electricity Market Models
3. Power Transfer, Inter & Intra State
4. Energy Efficiency in Grid
5. Energy conservation measures

Video Links

1. [Power Market Fundamental](#)
2. [Power Exchange](#)
- 5.5 [Energy Conservation](#)

Practice

1. Developing Market Model for electricity trading

Course 6: GRID Safety Norms, Electrical Accidents and prevention, Electricity Costing & Audit,

[Field Survey], [0-2-0], [5 Hrs]

- 6.1 Safety Requirement, Hazards, Electrical Accidents and prevention, First Aid
- 6.2 Safety : Safety Philosophy, Safety Procedures, GRID Safety Norms, Procedures for issuing L.C.P. and cancellation, Maintenance of Safety records.
- 6.3 First Aid : Places of Potential Hazards, Electric Shock Treatment, Artificial Respiration, Handling Emergency Conditions, Treatment of Wounds, Injuries & Burns.
- 6.4 Fire Fighting: Causes of Fire, Fire Extinction, Classification of Fires, Fire Fighting, Equipment: their operation – maintenance & refilling, Fire prevention.
- 6.5 Energy Audit.

Video Link

- 6.1.1 [General Grid Safety](#)
- 6.2.2 [Industrial Safety](#)
- 6.3.1 [Electrical Shock First Aid](#)
- 6.4.1 [Fire Extinguisher](#)

Practice

Hazard Analysis & Mitigation

Course 7: Principles of transformer

[DS Tools, Workshop Practice], [1-5-0], [20 Hrs]

- 7.1 Inner & Outer Part of Transformer,
- 7.2 Manufacturing of Transformer,
- 7.3 Transformer Test,
- 7.4 Conditions leading to faults in Transformer,
- 7.5 Maintenance of transformer

Practice

1. Transformer Manufacturing
 2. Transformer Testing
 3. Fault Finding & Corrective action
 6. **List of Projects/products to be done in domain: [200 Hrs]**
 1. Substation layout & Placement of equipment.
 2. Protection System of 33/11/0.4 KV substation.
 3. O & M of distribution substation.
 4. Energy Audit
 5. Safety Practice.
 6. Transformer Manufacturing & Testing.
- EVALUATION: As per Central QA system policy

Industrial Automation

Code	Course Title	(Credit)	T-P-PJ
IACU2100	Industrial Automation	24	5-9-10

Course Code	Course Title	Credits	Type T-P-PJ
CUIA2100	Introduction to Industrial Automation	1	1-0-0
CUIA2101	Advanced Programming & Control Blocks of PLC	3	1-2-0
CUIA2102	Control & Signal Wiring of PLC	2	0-2-0
CUIA2103	SCADA based advanced features	2	1-1-0
CUIA2104	SCADA & PLC based sequential control	1	0-1-0
CUIA2105	Human Machine Interface	3	1-2-0
CUIA2106	OPC server base data fetching & control	2	1-1-0
CUIA2107	Project	6	0-0-6
CUIA2108	Internship	4	0-0-4
	Total Credits	24	

Domain Track Objectives

- To upgrade knowledge levels needed for modern industries.
- Process & sequential control logic of industry.
- Project based training.

Domain Track Course outcomes

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Able to gain Knowledge on installation of Industrial Automation concept	PO1 (3),
CO3	Able to identify and resolve the hardware/software problems of automation	PO2(3), PO5(1)
CO4	Able to develop skill of designing automatic control system and controller for a particular application.	PO3(3)

Domain Syllabus

Course – 1: INTRODUCTION TO INDUSTRIAL AUTOMATION

- 1.1 Automation Uses
- 1.2 Automation - PLC Basics
- 1.3 Mechanical relays versus PLC
- 1.4 Functions of various blocks and working principle of advanced blocks.

Course – 2: ADVANCED PROGRAMMING & CONTROL BLOCKS OF PLC

- 2.1 CPT, ADD, SUB, MUL, DIV, SQR, NEG, TOD, FRD
- 2.2 MOV, MVM, AND, OR, XOR, NOT. CLR.
- 2.3 BSL, BSR, SQC, SQL, SQO, FFL, FFU, LFL, LFU
- 2.4 JMP, LBL, JSR, MCR
- 2.5 Connecting PLC software with SCADA software

Practice:

- P2.1 - Comparison of industry based analog signals.
- P2,2 - Detecting different product output of an industry
- P2.3 - Sequential control of an industry by using advanced blocks.
- P2.4 - Emergency control system of an industry
- P2.5 - Connecting PLC software with SCADA software

Course – 3: CONTROL & SIGNAL WIRING OF PLC

- 3.1 Control wiring of PLC.
- 3.2 PLC, Sensor and field instruments signal flow wiring.
- 3.3 Device connectivity

Practice:

- P3.1 PLC input/output wiring concept.
- P3.2 Connecting relay, contactor, sensors and other field instruments.
- P3.3 Controlling an industry motor using STAR-DELTA connection

Course – 4: SCADA BASED ADVANCED FEATURES

- 4.1 Alarms
- 4.2 Trends, Data base connectivity & Report generation
- 4.3 Recipe management
- 4.4 Security

Practice:

- P4.1 - Data fetching and representing on graph and excel
- P4.2 - Advanced controlling of industry by using SCADA

Course – 5: SCADA & PLC BASED SEQUENTIAL CONTROL

- 5.1 Script
- 5.2 Networking
- 5.3 Device connectivity.

Practice:

- P5.1 Script
- P5.2 Networking
- P5.3 Device connectivity

Course – 6: HUMAN MACHINE INTERFACE

- 6.1 What is HMI. Use of HMI
- 6.2 Concept of different operational features
- 6.3 Connectivity of HMI and PLC.

Practice:

- P6.1 Alarms
- P6.2 Security
- P6.3 Recipe manager

Course – 7: OPC SERVER BASE DATA FETCHING & CONTROL

- 7.1 Study of Open Platform Communications
- 7.2 OPC to control PLC, SCADA.
- 7.3 OPC based different protocol concept.
- 7.4 Data handling using OPC.

Practice:

- P7.1 Installation of OPC
- P7.2 OPC protocols

P7.3 Connectivity of PLC, SCADA & ARDUINO to OPC.

Course Outline

Course Code	Course Title	Credits	T-P-PJ
ESCU2050	Embedded System Design	20	4-10-6

Objective

- Develop a skilled workforce with the Knowledge of the latest trending technologies to meet the Embedded Industry needs.
- To make the student industry-ready with prompt hands-on in the various Real-Time Embedded Systems.

Course outcome

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Gain and apply knowledge about the architectural features and instructions of 32-bit ARM microcontrollers to develop the embedded system.	PO1(3)
CO3	Identify, analyze, formulate, develop and design various product-based applications based on Embedded Systems.	PO(2), PO3(3)
CO4	A diversified team will learn, configure and build a customized Linux Kernel and also be able to set up and use the Cross Development platform, which will help them in lifelong learning.	PO9(3), PO12(3)
CO7	And apply the techniques and knowledge gained in Embedded Systems to become an entrepreneur for sustainable development.	PO5 (2), PO7(3)

Domain Syllabus:

1. Microcontroller-Based Embedded System Design (57.5 Hrs)

1. Introduction to Embedded System
2. Embedded System Development Life Cycle
3. Introduction to ARM
4. AMBA & AHB
5. Features of ARM7, ARM9, ARM 11, ARM Cortex
6. Datasheet analysis
7. GPIO programming – LED, Seven Segment Display, LCD, Matrix keypad, Actuators(Relay, Motors and valves)
8. System control block-
9. ADC & DAC -- Sensors(Analog and Digital),

10. Timer/Counter
11. Pulse Width Modulation(PWM)
12. Vectored Interrupt Controller(VIC)
13. Real Time Clock (RTC)
14. Watch Dog timer (WDT)
15. Debugging with JTAG
16. Inter System Protocols – UART, USART, USB, Bluetooth, BLE, GPS, GSM
17. Intra System Protocols – I2C, SPI, CAN
18. Wireless Protocols and its Complete setup – NFC/ RFID, ZigBee, Bluetooth, Wi-Fi, MQTT, LORA,

2. Real-Time Operating System & Porting (57.5 Hrs)

1. Real-Time OS
2. Types of RTOS
3. GPOS vs RTOS
4. FreeRTOS
5. VxWorks
6. Task Management & its API
7. Scheduling Algorithms & its API
8. Inter Task Communication & its API
9. Resource Management & its API
10. AWS IoT Core for FreeRTOS
11. AWS IoT Green Grass setup on Raspberry Pi

3. Embedded Linux for ARM (57.5 Hrs)

1. Embedded Linux Overview
2. Linux File System
3. Types of Kernel
4. Shell Commands
5. Shell Scripting
6. Process Management System calls
7. Inter-Process Communication System calls
8. Linux Booting Sequence
9. Toolchains Configuration and Cross Compilation
10. Configuring & Installing Bootloaders (U-Boot)
11. Kernel Configuration and Compilation
12. Creating Custom Root File system
13. Remote Debugging Embedded Applications using GDB
14. Device Drivers- Char drivers
15. Static Linking & Dynamic Linking
16. Adding Static Module to the Kernel

4. AUTOSAR Design using CAN, CAN Analyser, and LIN (14 hours)

1. Introduction to Automotive System

2. Introduction to AUTOSAR
3. Details on CAN Protocols
4. SBUS CAN Analyser
5. LIN Protocol

Software Handling

1. Keil μ vision 5
2. Arduino IDE
3. ARM GCC Compiler
4. FreeRTOS, Raspbian OS, Ubuntu OS
5. VxSim
6. Proteus Professional 8.9
7. Node-RED

MPU Handling

1. Arduino
2. ESP8266
3. LPC2148/LPC2129
4. Raspberry Pi
5. STM32
6. Beagle Bone Black

List of Projects/ papers/jobs/products to be done in the domain: (To follow the Gate Process)

1. IoT-based Apparel Tracking System
2. IoT-based Smart Agriculture Monitoring & Controlling
3. Color-based Product Sorting Machine using IoT
4. IoT-based Smart Energy Meter

Course Developed and Prepared by: Prof. Swarna Prabha Jena

Course Outline

Code	Course Title	T-P-Pj (Credit)	Prerequisite
CSCU2080	Communication Systems Domain	4-8-6 (18)	NIL

Course Division

1. Microwave & RADAR Communications (2-1-0)
2. Satellite & TV Communications (1-2-0)
3. Cell Site and BTS Operation, Maintenance and Troubleshooting: RF Planning and Drive Test (0-3-0)
4. Optics and Wireless Sensor Networks (1-2-0)
5. Project (0-0-6)

Objective

- Develop the skills required to design a next generation wireless networks
- To involve the students in the theory and practice of optical and wireless sensor networks

Course outcome

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Gain Knowledge on microwave communication, fibre optics communication and wireless sensor network	PO1(3), PO2(3), PO4(2)
CO2	Analyze the concept of antenna design for various applications	PO2(3), PO3(3)
CO3	Examine the communication systems parameters performance mathematically	PO4(3)
CO4	Design and Simulation of microwave components and BTS installation	PO5 (3)
CO5	Estimate the performance analysis and optimization of various communication systems parameters	PO8(2), PO12(2)

Evaluation Systems

As per University Norms

Course content

1. Microwave & RADAR Communications (2-1-0) (33 Hours)

1. Introduction to Microwaves: Microwave frequencies
2. Scattering matrix formulation
3. Passive microwave devices
4. Active Microwave Devices
5. Study of field pattern of various modes inside a rectangular waveguide
6. Microwave Measurements
7. Transit time limitations in Microwave Bipolar Transistors
8. Power frequency limitations Microwave Field Effect Transistors
9. Gunn Effect
10. IMPATT diodes
11. TRAPATT diodes
12. Microwave vacuum tube based devices
13. Limitations of conventional tubes at UHF
14. Microwave Klystron
15. Reflex klystron,
16. Traveling wave tube
17. Magnetron
18. Introduction to Smith chart and its application for the unknown impedance measurement
19. Scattering Matrix Parameters
20. Introduction to radar and RADAR Parameters
21. MTI RADAR
22. FMCW RADAR
23. Tracking RADAR

- 24. Monpulse RADAR
- 25. RADAR Receiver
- 26. Synthetic Aperture RADAR

Text Books:

- 1. R E Collin, “Foundation for Microwave Engineering”, John Wiley & Sons, 2nd Edition, 2007
- 2. S Y LIAO, “Microwave Devices and Circuits”, PHI, 3rd Edition, 2003.
- 3. Merrill I skolnik, “Introduction to Radar Systems’, McGraw Hill, 2nd Edition, 2007.
- 4. G S N Raju, “Radar Engineering and Fundamentals of Navigational Aids”, IK international Publishers, 2008
- 5. G S N Raju, “Microwave Engineering ”, IK international Publishers, 2008.
- 6. Radar Systems Analysis And Design Using Matlab® Third Edition, Bassem R. Mahafza Decibel Research Inc. Huntsville, Alabama, Usa ,Crc Press Taylor & Francis Group

2. Satellite & TV Communications (32 Hours) (1-2-0)

- 1. Configuration of a satellite communications system
- 2. Types of orbit
- 3. Radio regulations
- 4. Keplerian orbits
- 5. Useful orbits for satellite communication
- 6. Perturbations of orbits
- 7. Digital video broadcasting via satellite (DVB-S)
- 8. Second generation DVB-S
- 9. Digital transmission of telephony
- 10. Digital broadcasting of television
- 11. Configuration of a link
- 12. Uplink received power
- 13. Downlink received power

14. Additional losses
15. Noise power spectral density at the receiver input
16. Individual link performance
17. Influence of the atmosphere
18. Mitigation of atmospheric impairments
19. Overall link performance with transparent satellite
20. Overall link performance with regenerative satellite
21. Study of 5G new radio (NR) standard, modulation Techniques used for 2G-5G

Case Study: A field report as a part of practice will be submitted by visiting the Nearest center and observing the satellite links and TV transmission techniques .

Text Book

1. Satellite communications systems / Gerard Maral, Michel Bousquet. — 5th ed, wiley , 2010.
2. Satellite Communications, by Dennis Roddy (Fourth edition), McGraw Hill
3. Satellite Communication, by Timothy Pratt, Charles Bostian, Jeremy Allnutt (Second Edition), John Wiley & Sons

3. Cell Site and BTS Operation, Maintenance and Troubleshooting: RF Planning and Drive Test (36 Hours) (0-3-0)

1. Antennas for mobile Tower
2. Power supply at BTS
3. Equipment used in the Shelter
4. Power Interface Unit (PIU)
5. Line Conditioning Unit (LCU)
6. Free Cooling Unit (FCU)
7. Preventive Maintenance (PM) & site management
8. Basic functioning of alarm box and the interface
9. Concept on TRX & Baseband receiver unit.
10. RF Propagation path
loss 3.11Frequency hopping
and Planning
12. RF Optimization

13. GSM RF Drive Test
14. 3G Optimization
15. EMF Radiation Calculation and testing
16. 4G Optimization

Text Book:

1. “Telecom Tower Maintenance” Vol. 1, Navkar Center for Skills, 2014.
2. Advanced cellular network planning and optimization 2G/2.5G/3G. . evolution to 4G , Author: Ajay R Mishra, Nokia Networks, John Wiley & Sons Ltd, The Atrium, Southern Gate, Chichester, West Sussex PO19 8SQ, England
3. Radio Network Planning and Optimisation for UMTS, Second Edition, Jaana Laiho and Achim Wacker, Nokia Group, Finland, Toma's Novosad,, Nokia Networks, Nokia Group, USA, John Wiley & Sons Ltd, The Atrium, Southern Gate, Chichester, West Sussex PO19 8SQ, England
4. Material: E1-E2 Upgradation Course –Consumer Mobility, RF Planning and Drive Test
5. Material: GTL , RF Optimisation.

4. Optical and Wireless Sensor Networks (1-2-0) (33 Hours)

1. Propagation of signals in optical fiber:
- 4.2. Transmission characteristics of optical fiber
- 4.3 .Optical fiber Transmitters.
- 4.4. Optical Components.
- 4.5 Optical fiber loss measurement using power meter, LASER and OTDR.
6. Layered Protocol Model in the Transport Network.
7. SONET and SDH, Architecture of Optical Transport Networks (OTNs)
- 4.8 Implementation and performance analysis of TCP/IP protocols. Tools to be used: NS2 Simulator and Socket Programming

9. Challenges for Wireless Sensor Networks.
10. Single-Node Architecture - Hardware Components.
11. Network Architecture - Sensor Network Scenarios
12. Physical Layer and Transceiver Design Considerations.
13. Routing Protocols.
14. Topology Control, Clustering.
- 4.15 Arduino and Wireless Communications
- 4.16. Sensor Tasking and Control.
17. WSN using Arduino with Wireless modules
18. MATLAB Experiments Related to Compressed Sensing for Energy Efficient WSN
19. Sensor Node Hardware – Berkeley Motes, Programming Challenges.
20. Node-level Software platforms, Node-level Simulators.

Code	Course Title	T-P-Pj (Credit)	Prerequisite
VLCU2070	Chip Design and Fabrication Using VLSI	6-8-6	NIL

Courses Division:

- ASIC Design (2-1-0)
- Digital VLSI (2-2-0)
- Analog VLSI (2-1-0)
- VERIFICATION USING SYSTEM VERILOG & UVM (0-4-0)
- Project (0-0-6)

Objective

Course Outcome

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	To acquire knowledge and become familiar with modern VLSI circuits	PO1(3), PO5 (3), PO3(3)
CO2	To develop critical thinking to solve issues involved in ASIC design, including technology choice, Timing analysis, tool-flow, testability.	PO1(3), PO5 (3)
CO3	To acquire problem solving skill to design CMOS amplifiers in deep submicron technology.	PO1(3), PO2(3)
CO4	Students will acquire the technical skill to become Industry-ready RTL Design/Physical design/Testing/Verification Engineer.	PO4(3), PO5(3), PO8(1), PO12 (3)

Evaluation Systems

As per University Norms

ASIC Design (2-1-0)

- 1.1 Custom IC Design, Cell-Based Design Methodology, Array Based Implementation Approaches.
- 1.2 Traditional and Physical Compiler Based ASIC Flow
- 1.3 Logic Synthesis Environment
- 1.4 Technology library: technology libraries, logic library basics, delay calculations
- 1.5 Static Time Analysis , Critical Path, Timing Exceptions
- 1.6 Multi Cycle Paths, False Paths and Timing Constraints
- 1.7 Floor Planning Place and Route Optimization
- 1.8 Partitioning: Partitioning For Synthesis and coding guidelines
- 1.9 Optimization and Mapping Constraints (Clock, Delay, Area, Design)
- 1.10 Design Methodology for Logic Cores

- 1.11 Architecture of The Present-Day Soc
- 1.12 Design Issues of SoC, Hardware &
- 1.13 Software Design, Core Libraries
- 1.14 EDA Tools SoC Design Flow Guidelines for Design Reuse
- 1.15 Design Process for Soft and Firm Cores
- 1.16 Design Process for Hard Cores, System Integration
- 1.17 Design Methodology for Memory & Analog Cores Embedded Memories
- 1.18 Design Methodology for Embedded Memories
- 1.19 Specification of Analog Circuits
- 1.20 Core Level Validation, Core Interface
- 1.21 Verification, SoC Design Validation

Text Books:

1. Verilog HDL, 2/E By Samir Palnitkar, Pearson Education
2. Himanshu. Bhatnagar, “Advanced ASIC Chip Synthesis” (2/e).KAP.2002
3. Rochit Rajsuman, ‘System-on-a-Chip: Design and Test’, Artech House, 2000

Reference Books:

1. Maheshwari, Naresh, Sapatnekar, “Timing Analysis and Optimization of Sequential Circuits”. 1998, Springer. ISBN: 978-0-7923-8321-5
2. Modern Digital Electronics. Author, R P Jain. Edition, 3. Publisher, Tata McGraw-Hill Education

Software Tool::

- Microwind
- Cadence
- Xilinx ISE

2.Digital VLSI (2-2-0):

- 2.1 Issues in Digital IC Design
- 2.2 Quality Metrics of A Digital Design
- 2.3 Manufacturing CMOS Integrated Circuits
- 2.4 Design Rules. Layouts
- 2.5 The Metal Oxide Semiconductor (MOS) Structure
- 2.6 The MOS System Under External Bias
- 2.7 Structure And Operation of MOS Transistor (MOSFET)
- 2.8 MOSFET Current-Voltage Characteristics
- 2.9 MOSFET Scaling And Small-Geometry Effects, MOSFET Capacitance
- 2.10 Static CMOS Inverter: Static And Dynamic Behavior Practices of CMOS Inverter
- 2.11 Components Of Energy And Power: Switching, Short-Circuit And Leakage Components
- 2.12 Technology Scaling And Its Impact On The Inverter Metrics
- 2.13 Static CMOS Design: Complementary CMOS, Ratioed Logic, Pass Transistor Logic
- 2.14 Dynamic CMOS Design: Dynamic Logic Design Considerations
- 2.15 Speed And Power Dissipation Of Dynamic Logic
- 2.16 Signal Integrity Issues, Cascading Dynamic Gates
- 2.17 CMOS Sequential Logic Circuit Design Introduction, Bi-Stable Circuit Elements
- 2.18 SR & JK Latch Circuits
- 2.19 Clocked Latch And Flip-Flop Circuits

- 2.20 CMOS D-Latch And Edge-Triggered Flip-Flop
- 2.21 Semiconductor Memory Design: Introduction, MOS Decoders
- 2.22 SRAM Design, DRAM Design
- 2.23 Memory Architecture And I/O Circuitry

Text Books:

- 1.Sung-Mo Kang and Yusuf Leblebici, CMOS Digital Integrated Circuits: Analysis and Design, Tata McGraw-Hill Publishing Company Limited
- 2.Jan M,Rabaey, AnanthaChandrakasan, BorivojeNikolic, Digital Integrated Circuits–A Design Perspective, PHI

Reference Books:

- 2.K,Eshraghian and N,H,E,Weste, Principles of CMOS VLSI Design – a Systems Perspective, 2nd Edn., Addison Wesley

Software Tool::

- Microwind
- Cadence

3.Analog VLSI (2-1-0):

- 3.1 Independent Sources: MOS Current Sources and Sinks
- 3.2 Current Mirror: Basic Current Mirrors, Cascode Current Mirrors
- 3.3 Current and Voltage Reference Circuits
- 3.4 Amplifier Design : Basic Concepts of Amplifier, Common Source Stage
- 3.5 Common Gate Stage, Cascode Stage
- 3.6 Differential Stage: Single Ended and Differential Operation
- 3.7 Basic Differential Pair
- 3.8 Frequency Response of Amplifiers: Miller Effect, Frequency Response of Common Source Stage
- 3.9 Common Gate Stage, Cascode Stage and Differential Pair
- 3.10 CMOS Op-Amps: Differential and Common Mode Circuits
- 3.11 Op-Amp CMRR Requirements, Need for Single and Multistage Amplifiers
- 3.12 Effect of Loading in Differential Stage
- 3.13 Digital To Analog Converters:(Binary Weighted Resistor, R-2R Ladder Network)
- 3.14 Analog To Digital Converters: (Dual Slope, Successive Approximation Type)
- 3.15 Frequency Compensation: Concepts and Techniques for Frequency Compensation
- 3.16 Dominant Pole, Miller Compensation, Compensation of Miller RHP Zero
- 3.17 Nested Miller, Compensation of Two Stage OP-Amps

Text Books:

- 1.Behzad Razavi, “Design of Analog CMOS Integrated Circuits”, McGraw-Hill, 2000.
- 2.Phillip E. Allen and Douglas R. Holberg, “CMOS Analog Circuit Design”, (Second Edition) Oxford University Press, February 2002.

Software Tool::

- Microwind

•Cadence

4.Verification Using SystemVerilog (0-4-0):

- 4.1 Verification Concepts
- 4.2 Introduction to System Verilog Language
- 4.3 Basic SV TB - Connecting to your design
- 4.4 SV-OOPs concepts and Randomization
- 4.5 Threads and Inter Process Communication
- 4.6 Introduction to Verification Methodologies
- 4.7 Case Study : Design and Verification of a SRAM Memory Cell Using UVM Methods

Software Tool::

•Questa Sim

Course Structure & Syllabus GTM – Domain

Code	Subject	Course Type	Credit

CUGM2140	DESIGN THINKING & MANAGING INNOVATION THROUGH GATE PROCESS	T + P + PJ (1+2+0)	3
CUGM2141	PLM TOOLS ON DASSAULT PLATFORM (DESIGN AND VALIDATION USING DYMOLA, CATIA, SIMULIA)	T + P + PJ (2+6+0)	8
CUGM2142	PROCESS MANAGEMENT USING ENOVIA	T + P + PJ (1+2+0)	3
CUGM 2143	PRODUCT Development	T-P-PJ (0-0-8)	8
	<i>TOTAL CREDITS</i>	<i>T-P-PJ (4-10-8)</i>	<i>22</i>

Domain Track Title: Go To Market-Product Development

Track Total Credits (4-10-8)

Courses Division (list all divisions):

- Design Thinking and Managing Innovation Through GATE Process (1-2-0)
- PLM Tools on Dassault Platform (Design and Validation using Dymola, Catia, Simulia) (2-6-0)
- Process management (Using Enovia) (1-2-0)
- Product Development (0-0-8)

Domain Track Objectives:

- To familiarize the student with Industrial Product Life Cycle Management Processes
- Teach Dassault tools for PLM
- Develop digital prototypes of the products and validate them and innovate for design efficiency

Domain Track Learning Outcomes:

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)

CO1	A Digitally Validated Innovatively and efficiently designed product.	PO1(3), PO2(3)
CO2	Experience with 3 D experience platform Catia-Simulia- Dymola and Enovia tools.	PO1(3), PO2(3)
CO3	PLM cycle management.	PO1(3), PO5(3)

Domain Syllabus:

1.Design Thinking and Managing Innovation Through GATE Process (1-2-0)

1.1 Customer or User Requirement for Specification (Gate 0)

- 1.2Requirement gathering and feasibility study of the project
- 1.3understanding users' motivations and to gather deep insights about a product
- 1.4challenges and benefits of the products
- 1.5Understanding the product through literature survey and available resources
- 1.6Market analysis of existing products
- 1.7Finalizing the product specification
- 1.8Preparing a project plan

2.1Design Parameter Optimization in Dymola (Gate 1)

Designing and simulating system and subsystem of the product using system Engineering Dymola

- 2.2Final functional and logical design of integrated product in system engineering with simulation.
- 2.2Customizing the product properties with required inputs and analyzing the outputs.

3.1CATIA Drawing with Styling (Full product drawing) (Gate 2)

- 3.2CATIA part design with assembly design of the product.
- 3.3Behaviour experience of the product

4.1Digital Testing and Validation of the Product Using Simulia (Gate 3)

- 4.2Complete structural, thermal, mechanical simulations with other required simulation is done for the product.

5.1Regulatory Certification (Gate 4)

- 5.2Once the regulatory certification for a particular product is over through certain testing and validation, the product is all set for the next stage.

6.1BOM and Production planning and Vendors development (ENTRY)

- 6.2 Launching of Product.

2.PLM Tools on Dassault Platform (Design and Validation using Dymola, Catia, Simulia) (2-6-0)

- 2.1 System Engineering Dymola
- 2.2Finding energetic dimension of the desired product
- 2.3Designing system and subsystem using behaviour modelling work bench
- 2.4Getting familiar with Dymola- modelica library.
- 2.6Understanding the behaviour of the model through input n output data
- 2.7Customizing the product properties

- 2.8 System Integration with product dimension.
- 2.10 Functional and logical design of integrated product in system engineering.
- 2.11 D Model using CATIA
- 2.12 ATIA part design of different components
- 2.13 Surface designing for creating high end complex design
- 2.14 Assembly Designing of the complete product
- 2.15 Wire routing and entire harnessing of the design.
- 2.16 Mechanical system Designing of the product
- 2.17 CATIA live rendering
- 2.18 Behaviour experience of the complete product.
- 2.19 Design validation/Simulation using Simulia
- 2.20 Simulation using Simulia
- 2.21 Classification of simulation
- 2.22 Structural simulation, Thermal simulation and both
- 2.23 Linear and non linear analysis
- 2.24 CFD Analysis, Fatigue, Durability
- 2.25 Explicit Analysis, Crash Analysis (Abaqus)

3. Process management (Using Enovia) (1-2-0)

- 3.1 Introduction to project management, Project Definition, Project Initiation
- 3.2 Need for Project Management
- 3.3 Provide vision and direction, increase efficiency, Control.
- 3.4 Project scope, manage costs, manage time, Schedule the work
- 3.5 Deal with potential risks
- 3.6 Project Management Principles, Project structure, Clear goals
- 3.7 Transparency about project status, Risk recognition,
- 3.8 The Project Life Cycle: The project initiation stage, The project planning stage, The project execution stage, The project closure stage.
- 3.9 Project Identification and Selection: Introduction, Project Identification Process
- 3.10 Project Initiation, Pre-Feasibility Study, Feasibility Studies, Project Break-even point
- 3.11 Core functionality integration with different engineering IT tools, specifically with **Catia**, **Delmia**, **Dymola**, **Simulia** etc.
- 3.12 PDM (product data management) systems and their implementations in product lifecycle (Enovia)
- 3.13 Exemplification on how PLM functionality can be used to facilitate increased information management efficiency and exchange (Enovia)
- 3.14 Resources Considerations in Projects: Resource Allocation, Scheduling, Project Cost Estimate and Budgets, Cost Forecasts (Enovia)

4. Product Development (0-0-8)

- 4.1 The Domain will be delivered through case studies, assignments and product development.
- 4.2 The outcome will be an end-to-end digital prototype of a product, which may be patinized.
- 4.3 Product Development Stack:
 - 1. E- Cart (Full product)

2. E- SCV (Modular Platform design and electric power train design , BIW)
3. Insulin Pump (Design of different components like control unit, PCB, micro dc motor)
4. 500 kg Payload Drone (Design of Mechanical system)

Session Plan for the Entire Domain:

	Design Thinking and Managing Innovation Through GATE Process (1-2-0)	
Session	1	1.1 Customer or User Requirement for Specification (Gate 0)
Session	2	1.2 Requirement gathering and feasibility study of the project
Session	3	1.3 Market analysis of existing products
Session	4	1.4 Finalizing the product specification and preparing a project plan
Session	5	1.5 Design Parameter Optimization in Dymola (Gate 1)
Session	6	1.6 Designing and simulating system and subsystem of the product using system Engineering Dymola
Session	7	1.7 Final functional and logical design of integrated product in system engineering with simulation.
Session	8	1.8 CATIA Drawing with Styling (Full product drawing) (Gate 2)
Session	9	1.9 Digital Testing and Validation of the Product Using Simulia (Gate 3)
Session	10	1.10. Regulatory Certification (Gate 4) BOM and Production planning and Vendors development (ENTRY)
Practice(2h)	1	1.1 Customer or User Requirement for Specification and Requirement gathering and feasibility study of the project
Practice(2h)	2	1.3 Market analysis of existing products and finalizing the product specification and preparing a project plan
Practice(2h)	3	Review (Gate 0)
Practice(2h)	4	1.5 Design Parameter Optimization in Dymola
Practice(2h)	5	1.6 Designing and simulating system and subsystem of the product using system Engineering Dymola
Practice(2h)	6	Review (Gate 1)
Practice(2h)	7	1.7 Final functional and logical design of integrated product in system engineering with simulation.
Practice(2h)	8	1.8 CATIA Drawing with Styling (Full product drawing) (Gate 2)
Practice(2h)	9	Review
Practice(2h)	10	1.9 Digital Testing and Validation of the Product Using Simulia (Gate 3)
Practice(2h)	11	1.10. Regulatory Certification (Gate 4) BOM and Production planning and Vendors development (ENTRY)
Practice(2h)	12	Review
	2. PLM Tools on Dassault Platform (Design and Validation using Dymola, Catia, Simulia) (2-6-0)	
Session	1	2.1 System Engineering Dymola

Session	2	2.2 Finding energetic dimension of the desired product
Session	3	2.3 Designing system and subsystem using behaviour modelling work bench
Session	4	2.4 Getting familiar with Dymola- modelica library.
Session	5	2.5 Understanding the behaviour of the model through input n output data
Session	6	2.6 Customizing the product properties
Session	7	2.7 System Integration with product dimension.
Session	8	2.8 Functional and logical design of integrated product in system engineering.
Session	9	2.9 3D Model using CATIA
Session	10	2.10 CATIA part design of different components
Session	11	2.11 Surface designing for creating high end complex design
Session	12	2.12 Assembly Designing of the complete product
Session	13	2.13 Wire routing and entire harnessing of the design.
Session	14	2.14 Mechanical system Designing of the product
Session	15	2.15 CATIA live rendering
Session	16	2.16 Behaviour experience of the complete product.
Session	17	2.17 Design validation/Simulation using Simulia
Session	18	2.18 Simulation using Simulia, Classification of simulation, Structural simulation, Thermal simulation and both
Session	19	2.19 Linear and non-linear analysis
Session	20	2.20 CFD Analysis, Fatigue, Durability, Explicit Analysis, Crash Analysis (Abaqus)
Practice(3 h)	1	P2.1 System Engineering Dymola
Practice(3 h)	2	P2.2 Finding energetic dimension of the desired product
Practice(3 h)	3	P2.3 Designing system and subsystem using behaviour modelling work bench
Practice(3 h)	4	P2.4 Getting familiar with Dymola- modelica library.
Practice(3 h)	5	P2.5 Understanding the behaviour of the model through input n output data
Practice(3 h)	6	P2.6 Customizing the product properties
Practice(3 h)	7	P2.7 System Integration with product dimension.
Practice(3 h)	8	P2.8 Functional and logical design of integrated product in system engineering.
Practice(3 h)	9	P2.9 3D Model using CATIA https://www.youtube.com/watch?v=ISdup32L6Mw
Practice(3 h)	10	P2.10 CATIA part design of different components https://www.youtube.com/watch?v=CQWjb91_vKg

Practice(3 h)	11	P2.11 Surface designing for creating high end complex design https://www.youtube.com/watch?v=RT24Yj5thd8
Practice(3 h)	12	P2.12 Assembly Designing of the complete product https://www.youtube.com/watch?v=B7_irVMmOzw
Practice(3 h)	13	P2.13 Wire routing and entire harnessing of the design.
Practice(3 h)	14	P2.14 Mechanical system Designing of the product https://www.youtube.com/watch?v=B-XoaRfeD9w
Practice(3 h)	15	P2.15 CATIA live rendering https://www.youtube.com/watch?v=HsK3RVTOX1Q
Practice(3 h)	16	P2.16 Behaviour experience of the complete product https://www.youtube.com/watch?v=9RgdZUvEjPw
Practice(3 h)	17	P2.17 Design validation/Simulation using Simulia https://www.youtube.com/watch?v=cDDeWRB7PCs
Practice(3 h)	18	P2.18 Simulation using Simulia https://www.youtube.com/watch?v=cDDeWRB7PCs
Practice(3 h)	19	P2.19 Classification of simulation https://www.youtube.com/watch?v=gVlvp1RD2s
Practice(3 h)	20	P2.20 Structural simulation, Thermal simulation and both
Practice(3 h)	21	P2.21 Linear and non linear analysis
Practice(3 h)	22	P2.22 CFD Analysis, Fatigue, Durability
Practice(3 h)	23	P2.23 Explicit Analysis, Crash Analysis(Abaqus)
Practice(3 h)	24	P2.24 Explicit Analysis, Crash Analysis(Abaqus)
Practice(3 h)	25	P2.25 CFD Analysis, Fatigue, Durability
3.Process management (Using Enovia) (1-2-0)		
Session	1	3.1 Introduction to project management, Project Definition, Project Initiation
Session	2	3.2 Need for Project Management
Session	3	3.3 Provide vision and direction, increase efficiency, Control.
Session	4	3.4 Project scope, manage costs, manage time, Schedule the work
Session	5	3.5 Project Management Principles, Project structure, Clear goals
Session	6	3.6 Transparency about project status, Risk recognition, Deal with potential risks
Session	7	3.7 The Project Life Cycle: The project initiation stage, The project planning stage, The project execution stage, The project closure stage.
Session	8	3.8 Project Identification and Selection: Introduction, Project Identification Process
Session	9	3.9 Project Initiation, Pre-Feasibility Study, Feasibility Studies, Project Break-

- even point
- Session 10 3.10 Core functionality integration with different engineering IT tools, specifically with Catia, Delmia, Dymola, Simulia etc.
- Practice(2 h) 1 P3.1 Getting started with Enovia with known use case.
- Practice(2 h) 2 P3.2 Practicing for the given project
- Practice(2 h) 3 P3.3 Define an existing project using Enovia
- Practice(2 h) 4 P3.4 Practicing for the given project
- Practice(2 h) 5 P3.5 Learning Task allocation for an existing project using Enovia
- Practice(2 h) 6 P3.6 Practicing for the given project
- Practice(2 h) 7 P3.7 Resource allocation for different tasks in an existing project using Enovia
- Practice(2 h) 8 P3.8 Practicing for the given project
- Practice(2 h) 9 P3.9 Review and monitoring of an existing project through Enovia
- Practice(2 h) 10 P3.10 Practicing for the given project
- Practice(2 h) 11 P3.11 Uploading deliverables of the project through Enovia
- Practice(2 h) 12 P3.12 Practicing for the given project
- List of Projects/ papers/jobs/products to be done in domain:

DOMAIN TITLE: Automobile Engineering (AECU2170)

Sl. No.	Course Code	Course Title	Course Type	T-P-Pr	Credits
1	CUAE2170	Introduction to	Theory	2-1-0	3

		Automobile Engineering	+Practice		
2	CUAE2171	Subsystems of Automobile	Theory + Practice	3-2-0	5
3	CUAE2172	Electric Vehicles	Theory + Practice	2-1-0	3
4	CUAE2176	Maintenance of Automobile	Practice	0-5-0	5
5	CUAE2177	Project		0-0-4	4
6	CUAE2175	Internship		0-0-4	4
Total					24

Domain Track Objectives:

1. To familiarise the students with different systems and subsystems of automobile.
2. To teach basic skill in maintenance of different types of automobiles.
3. To know the operation and maintenance of electric vehicle.

Domain Track Course Outcomes:

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Students will gain knowledge about the construction and working of different systems and subsystems of automobile.	PO1(3)
CO3	They will be able to disassemble and assemble major aggregates of the automobile	PO3(1)
CO4	Students will be able to do vehicle trouble shooting	PO5(3)

Introduction to Automobile Engineering

Course Title	Course Code	Type of Course	T-P-Pr	Pre-Requisite
Introduction to Automobile Engineering	CUAE2170	Theory+Practice	2-1-0	Nil

Course Objective

- To understand the working of automobiles and its sub-systems
- To learn the modern technologies used in automobiles

Course Outcome

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Able to gain knowledge on various components of automobile that uses latest technologies	PO1(2)
CO3	Able to identify problems in automobile engines	PO2(3)

Course content

Module I

3 (hrs)

Automobile Architecture: Definition and Classification of Automobiles, Major Units of the Automobile, Types of Automobile Layouts, Automobile Chassis Types and Components, Automobile Body Types and Components, Automobile Safety Parameters.

Module II

6 (hrs)

Engine: Classification of Engine, Engine Nomenclature, Components of Engine, Valve Timing Diagram of SI & CI Engines, Variable Valve Timing, Working Principles of Modern Engine Combustion Technologies (CRDI, GDI, HCCI, Dual Fuel Engine, Stratified Charge Engine).

Practice

- Valve Timing Diagram of SI Engine.
- Valve Timing Diagram of CI Engine.

Module III

5 (hrs)

Carburetion: Air-Fuel Ratio, Mixture Requirements for Different Load Conditions, Factors Affecting Carburetion, Principle of Carburetion, Limitations of Simple Carburettor, Additional Systems in Carburettor, Concept of Electronic Carburettor.

Practice

- Model Study of a Solex Carburettor

Module IV

5 (hrs)

Fuel Injection: Classification of Injection Systems, Fuel Feed Pump, Injection Pump, Injection Pump Governor, Fuel Injector, Nozzle, Electronic Injection Systems, Multi-Point Fuel Injection (MPFI) System, Direct And Indirect Fuel Injection.

Practice

- Study of Fuel Injection System of a Diesel Engine.

Module V

5 (hrs)

Transmission System: Layout of Power Flow from Engine to Wheels, Brief Construction and Working Principles of - Clutch, Transmissions, Propeller Shaft, Final Drive and Differential, Front and Rear Axles.

Practice

- Study of Transmission System of Automobile.
- Model Study of Differential of Automobile.

Module VI

5 (hrs)

Cooling and Lubrication System:

Direct Air Cooled and Indirect Liquid Cooled Cooling Systems, Types and Components of Liquid Cooled Cooling System, Engine Coolant and Antifreeze Solution, Desired Properties of Lubricants, Classification, Construction, Working Principles and Components of Various Types of Lubricating Systems.

Practice

- Model Study of Air Cooling System.
- Model Study of Liquid Cooling System.

Module VII

4 (hrs)

Super Charging & Turbo Charging: Naturally Aspirated and Forced Induction Engine, Effect of Forced Induction, Method of Supercharging, Types of Super Chargers, Basic Principle and Method of Turbo Charging, Types of Turbo Charging, Concept of Variable Geometry Turbocharging.

Practice

- Study of Working Model of Supercharger
- Study of Working Model of Turbocharger.

Text Books

1. Gupta R. B., Automobile Engineering, Satya Prakashan, New Delhi.
2. Giri N. K., Automobile Technology, Khanna Publishers.

References

1. Gupta H. N., Fundamentals of Internal Combustion Engines, PHI Learning.

Subsystems of Automobile

Course Title	Course Code	Type of course	T-P-Pr	Pre-Requisite
Subsystems of Automobile	CUAE2171	Theory + Practice	3-2-0	Nil

Course Objective

• To understand the construction and working principle of different sub-systems of automobile • To get knowledge on latest technologies used in automobile engineering

Course Outcome

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Able to gain Knowledge on various subsystems of automobile with modern technologies	PO1 (2)
CO3	Able to identify problems in automobile engines	PO2(3)
CO4	Able to dismantle various automobile subsystems by using special purpose tools	PO5 (3)

Course content

Module I

6 (hrs)

Engine Emissions: Sources of Air Pollution from Automobiles and Their Control, Crank Case Emission Control System, Evaporative Emission Control System, Exhaust Emission Control System: Air Injection, EGR, Catalytic Converters, Selective Catalytic Reduction (SCR) Technology, EURO/Bharat Stage Norms: I, II, III, IV, V And VI, Road Map for Implementation of Bharat Stage Norms In India.

Practice

- Identification of Different Sub-Systems of Automobile.
- Studies of Exhaust Gas Recirculation System (EGR) in KNOW Vehicle.

Module II

5 (hrs)

Ignition System: Effect of Spark Timing on Emission and Ignition Timing Controls, Drawbacks of Conventional Ignition Systems, Electronic Ignition Systems (TCI And CDI), Engine Cylinder Numbering Scheme and Firing Order of Multi Cylinder Engines.

Practice

- Study of Battery Ignition and Magneto Ignition System.
- Disassembly and Assembly of 6-Cylinder Diesel Engine

Module III

8 (hrs)

Transmission System: Power Transmission in Automobile (Front Wheel Drive, Rear Wheel Drive, Four-Wheel Drive, All-Wheel Drive).

Clutch System: Key Design Considerations of Clutches, Types of Clutches, Construction and Working Principle of Single Plate Friction Clutch, Diaphragm Clutch, Cone Clutch, Centrifugal Clutch.

Gear Box: Purpose of Gear Box, Types of Automobile Gear Boxes, Construction and Working Principle of Sliding Mesh, Constant Mesh, Synchronizer Mechanism and Synchromesh Gear Boxes, Planetary Gear Mechanism, Fluid Coupling and Torque Convertor, Construction and Working Principle of Automatic Transmission, Construction and Working Principle of Continuously Variable Transmission (CVT) and Automated Manual Transmission (AMT).

Practice

- Study of Single Plate Friction Clutches (Coil Spring Type And Diaphragm Type).
- Study of Synchronizer Mechanism And Synchromesh Gear Box, Continuously Variable Transmission (CVT).

Module IV

12 (hrs)

Propeller Shaft and Differential: Function and Need of Propeller Shaft, Hotchkiss Drive and Torque Tube Drive, Construction of Propeller Shaft, Universal/Hooke's Joints, Slip Joint, Constructional Features and Working Principle of Differential Mechanism, Types of Differentials (Locking Type Differential, Limited Slip Differential).

Axles: Types of Automotive Axles, Constructional Features, Types and Working Principle of Front Axles, Lift Axles, Rear Axle, Third Differential in Tandem Axle Vehicles, Construction and Working Principle of Manual Transaxles and Transfer Cases.

Practice

- Study of Propeller Shaft, Universal Joints, Slip Joints, Centre Bearing.
- Study of Front Axle System.
- Study of Rear Axle System Including Differential Mechanism.
- Disassembly and Assembly of Manual Transaxle of Front Wheel Drive Car.

Module V

10 (hrs)

Steering System: Purpose of Steering System, Components of Steering System, Steering Geometry (Castor, Camber, Toe-In, Toe-Out, King Pin Inclination), Types of Steering Gear Boxes and their Construction and Working Principles, Hydraulic and Electrically Power Assisted Steering Systems.

Braking System: Requirement and Key Design Parameters of Braking System, Classification and Types of Braking Systems, Mechanical Brake, Hydraulic Brake, Air Brake, Vacuum Brake, Disc Brake. Construction, Working Principle and Components of Anti-Lock Braking System (ABS)

Practice

- Study of Steering Gear Box And Hydraulic Power Assisted Steering System.
- Identifying the Different Components and Working Of Drum Brake, Disc Brake, Hydraulic Brake, Air Brake System.
- Study of Anti-Lock Braking System (ABS) In KNOW Vehicle.

Module VI

6 (hrs)

Auto Electric System: Wiring Diagram of Horn Circuit, Lighting Circuit, Cut-Out Circuit, Voltage and Current Regulator Circuit in Commutator Type Generator, Combined Three-Unit Regulator Circuit, Voltage and Current Regulator in Alternating Current Type Generator And Flasher Circuit (Sketch And Description), Common Ignition Troubles And Its Remedies, Basic Electronic Ignition Trouble Shooting Charts, Spark Plugs: Purpose, Construction and Specifications.

Module VII

8 (hrs)

Suspension System: Purpose and Classification of Suspension Systems, Sprung and Unsprung Mass, Major Components of Suspension System, Description of the Conventional Suspension Systems for Rear and Front Axle. Panhard Rod, Macpherson Strut, Double Wishbone Suspensions. Description of Independent Suspension System Used In Cars (Coil Spring And Torsion Bars), Constructional Features and Working of Air Suspension System, Anti-Roll Bars, Constructional Features, Types and Working of Telescopic Shock Absorber.

Practice

- Identification of Different Types of Suspension Systems: Coil Spring, Tension and Telescopic Suspension System.

Text Books

1. Gupta R. B., Automobile Engineering, Satya Prakashan New Delhi
2. Giri N. K., Automobile Technology, Khanna Publishers

References

Electric Vehicles

Course Title	Course Code	Type of Course	T-P-Pr	Pre-requisite
Electric Vehicles	CUAE2172	Theory+ Practice	2-1-0	Nil

Course Objective

- To study electric drive vehicles & its applications
- To know the basic maintenance of different parts of electric vehicle

Course Outcome

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Able to gain knowledge on various technologies used in electric vehicle	PO1(3)
CO3	Able to identify problems in electric vehicle	PO2(2)
CO4	Able to do maintenance of various components of electric vehicle	PO5 (3)

Course content

Module I

5 (hrs)

Introduction to Electric Vehicles: Electric Vehicles Advantages and Disadvantages, EV Market and Promotion, Main Components of Electric Vehicle and Its Functions (Electrical and Mechanical).

Practice:

- Study of Different Components of E-Rickshaw and Assembling Methods.
- Working of Circuits in Controllers with respect to Current and Voltage Rating.

Module II

3 (hrs)

Electric Vehicle Drive Trains: EV Transmission Configurations, Basic Architecture of Electric Drive Trains, Single and Multi-Motor Drives, In Wheel Drives.

Module III

6 (hrs)

Energy Sources: Working Principle of Battery, Types of Batteries, Lead-Acid Battery, Nickel-Cadmium Battery, Nickel-Metal-Hydrate (Nimh) Battery, Lithium Batteries, Battery Parameters, Fuel Cells,

Practice:

- Maintenance of Lead Acid Batteries.
- Wiring & Harnessing of Battery Circuit.

Module IV

8 (hrs)

Electric Motors: Classification of Electric Motors, DC Motor, Types of DC Motors, Brushless DC Motor, AC Motor, Types of AC Motors, Induction Motor, Synchronous Motor, Regenerative Braking.

Practice:

- Study of Different Parts of D.C. Motor and Make Connection.
- Performance Characteristics of a Shunt and Series DC Motor
- Load Test on Three Phase Induction Motor.
- Speed Control of DC Shunt Motor by Armature and Field Control.

Module V

5 (hrs)

Electric Vehicle Maintenance & Safety: Maintenance & Trouble Shooting of Different Components of EV, High Voltage Electrical Safety, Tool and Equipment Usage, High Voltage Safety Rules, Electrical Isolation.

Practice:

- Maintenance of BLDC Motor.
- Maintenance of Hub Motor.

Module VI

3 (hrs)

Design Concept of Electric Vehicle: Power and Torque Calculation of Electric Vehicles, Sizing of Components, Initial Acceleration, Maximum Velocity, Maximum Gradability.

Module VII

3 (hrs)

Hybrid Electric Vehicles: Types of Hybrids, Series and Parallel HEVs, Advantages and Disadvantages, Series-Parallel Combination, Hybrid Drivetrains, Sizing of Component

Text Books

1. Hussein Iqbal, Electric and Hybrid Vehicles: Design Fundamentals, CRC Press
2. Chau K. T., Electric Vehicle Machines and Drives: Design, Analysis and Application, Wiley.

References

1. Chan C.C. and Chau K.T., Modern Electric Vehicle Technology, London: Oxford University.

Maintenance of Automobile

Course Title	Course Code	Type of Course	T-P-Pr	Pre-Requisite
Maintenance of Automobile	CUAE2173	Practice	0-3-0	Nil

Course Objective

- To be aware with the basic maintenance of four wheeler and two wheeler
- To learn the overhauling of each system of four wheeler and two wheeler
-

Course Outcome

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Able to gain Knowledge on various modern automobile tools and different components of electric vehicle	PO1 (2)
CO3	Able to diagnose problems in automobile engines	PO2(3)
CO4	Able to carry out maintenance in any parts of automobile	PO5 (3)

Practice

- Safety Precautions in Automobile Maintenance.
- Identification and Functions of Various Tools and Equipments used in Automobile Workshop.
- Disassembling and Assembling of Engine of a Four Wheeler.
- Disassembling and Assembling of Engine of a Two Wheeler.
- Engine Troubleshooting.
- Nomenclature of a Spark Plug and Spark Plug Reading, Testing and Cleaning of Spark Plug.
- Checking and Replenishing Lubricating Oil, Engine Coolant, Power Steering Hydraulic Oil and Wind Screen Wiper Water.
- Overhauling and Servicing of Fuel System including Air Filter.
- Disassembling and Assembling Of Clutch, Clutch Troubles And Remedies.
- Repairing and Adjustment of Brake System.
- Disassembling and Assembling of Propeller Shaft.
- Inspection and Servicing of Gear Box.
- Inspection and Servicing Of CVT.
- Tire Change Operation, Wheel Balancing, Wheel Alignment, Tire Inspection (Tubeless & Tube) and Inflation.
- Overhauling of Suspension System.
- Disassembling and Assembling of Steering System and Adjustment of Drag Link.
- Preparation of Electrical Circuits using Switches and Fuses.
- Checking of Battery Terminal Voltage, Electrolyte Level and Specific Gravity.
- Inspection of Different Electrical Circuits and ECU.
- Checking of Ignition System Circuit & Components.

Reference Book:

1. Training Manual of Four Wheeler Maintenance (Ashok Leyland)
2. Training Manual of Two Wheeler Maintenance (Yamaha).

DOMAIN TITLE: Manufacturing (Conventional, CNC and Additive) CMCU2150

Sl. No.	Course Code	Course Title	Course Type	T-P-Pr	Credits
1	CUCM2150	Manufacturing Requirements and Planning (Jigs & Fixtures; Process Planning & Cost Estimation)	Theory	2-0-0	2
2	CUCM2151	Conventional Machining for Cylindrical and Prismatic Shape Components	Practice+ Project	0-4-2	6
3	CUCM2152	CNC Machining (0-6-2)	Practice+ Project	0-6-2	8
4	CUCM2153	Non-Traditional Machining and 3D Printing 0-2-2	Practice+ Project	0-2-2	4
5	CUCM2154	Wood Engineering (0-2-0)	Practice	0-2-0	2
6	CUCM2155	Internship	Project	0-0-4	4
Total					26

Domain Track Objectives:

To provide in-depth technical training & knowledge of machining technologies and machinery which would strengthen product development and industrial-institutional partnership.

Domain Track Course outcomes:

Students will able to

1. Operative machine tools effectively & efficiently
2. Produce components/products by executing various operations with desired accuracy & finish

Course Outcomes

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Knowledge to do machining effectively & Efficiently.	PO1 (3)
CO3	Able to identify and solve problems in product machining.	PO2(3)
CO4	Use of advanced CAD & CAM software	PO4(3), PO5 (3)
CO5	Research in advancement in machining	PO2 (3), PO3 (2)

Manufacturing Requirements and Planning (Jigs & Fixtures; Process Planning & Cost Estimation) 20 Hrs

Course Title	Course Code	Type of Course	T-P-Pr	Pre-Requisite
Manufacturing Requirements and Planning (Jigs & Fixtures; Process Planning & Cost Estimation)	CUCM2150	Theory	2-0-0	Nil

Objective

- To learn basic concepts, functions and design principles of Jigs and Fixtures
- To know the importance of work piece location & clamping
- To learn fundamentals and execution of process planning and cost estimation for a component need to be manufactured

Course outcomes

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Knowledge on various aspects of Jigs & Fixtures, Process Planning, and Cost Estimation in machining.	PO1(3)
CO3	Identifying and solving problems in machining process	PO2(3)

Course content (20 Hrs)

Module I Introduction to Jigs & Fixtures (2 Hrs)

Theory

Fundamental Concept and Need of Jigs and Fixtures; Jigs and Fixtures design principles and factors; Materials used in jigs & Fixtures.

Module II Locators (3 Hrs)

Theory

General Principles of Degrees of Freedom and Constraints; Foolproofing; Basic rules for location; Locating methods, Types of locators.

Module III Clamps & Indexing Devices (3 Hrs)

Theory

Principles of clamping, Types of clamps, Linear indexing, precision linear indexing and rotary indexing

Module IV Various Jigs & Fixtures (3 Hrs)

Theory

Components of Jigs, Types of Jigs, Selection of Jigs

Module V Types of Fixtures (3 Hrs)

Theory

Salient features of milling fixtures, Classification of milling fixtures, Facing fixtures, Slotting Fixtures. Turning (Standard chucks, Spring collets, Cylindrical liners, Mandrels, Turning Fixtures), Grinding, broaching, welding and modular fixtures

Module VI Process Planning: Introduction (3 Hrs)

Theory

Objectives and Approaches to Process Planning; Process Planning Activities; Process Planning & Production Planning; Operating Sequences, Setup Documents for Process Planning.

Module VI Introduction to Cost Estimation (3 Hrs)

Theory

Objectives of Cost Estimation; Components of a Cost Estimate; Cost Estimation Procedure; Classification of Costing; Elements of Cost; Expenses; Cost accounting, Types of Cost Estimates; Methods of Cost Estimates; Data Requirements and Sources of information; Allowances in Estimation (of Standard Time)

Text Books

1. Joshi, P H, Jigs & Fixtures, 2010, 3rd Edition, McGraw Hill.
2. Nagpal, G R, Tool Engineering & Design, 2000, Khanna Publishers.

Reference Books

1. Venkataraman, K, Design of Jigs, Fixtures & Press Tools, 2015, Wiley & Sons
2. Mehta, N K, Metal Cutting and Design of Cutting Tools, Jigs & Fixtures, 2015, McGraw Hill

Conventional Machining for Cylindrical and Prismatic Shape Components (75 Hrs)

Course Title	Course Code	Type of course	T-P-Pr	Pre-Requisite
Conventional Machining for Cylindrical and Prismatic Shape Components	CUCM2151	Practice+ Project	0-4-2	

Objective

- To practise principles & requirements of machining and machine tools to get cylindrical surfaces
- To get knowledge on latest technologies used in automobile engineering

Course outcome

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Knowledge operate machine effectively & efficiently.	PO1 (3), PO7 (1)
CO4	Hands-on practice to produce a component by executing various operations with desired tolerance	PO2(3), PO9(1)
CO5	Research in advancement in machining process	PO2 (3), PO3 (2)

Course content

Course Outline

1. Cylindrical Turning Operations (Both Internal and External), Knurling, Thread Cutting, Stepped Turning)
2. Kinematic Study of Centre Lathe
3. Hole Making Operation in Turret Lathe
4. Work Holding and Tool Holding Devices For Turning Operations
5. Kinematic Study of Pillar Drilling Machine, Radial Drilling Machine and Boring Machine
6. Counter Boring , Counter Sinking and Threading Operations
7. Finishing Operations
8. Kinematic Study of Shaping Machines and Planning Machine
9. Work Holding and Tool Holding Devices Used for Shapers, Planers and Grinders
10. Machining Operations Using Flat Grooves, Flat and Bevel Surfaces, Dovetailed Surfaces
11. Kinematic Study of Horizontal Milling Machine, Vertical Milling Machine
12. Surface Grinding Machines
13. Work Holding and Tool Holding Devices Employed in Milling Machines
14. Flats, Grooves, Slots and Keyways Cutting Using Milling Machine

15. Gear Cutting Using Milling Machine
16. Process Planning of Prismatic Components, Logical sequencing of Operations
17. Estimation of Machining Operations Time and Cost

Text Books

1. Rajput, R K, A Text Book of Manufacturing Technology, 2007, 1st Edition, Laxmi Publications.
2. Rao, P N, Manufacturing Technology, Volume 2, 2009, 2nd Edition, McGraw Hill.

Reference Books

1. Abdel, H, Fundamentals of Machining Processes: Conventional and Nonconventional Processes, 2008, CRC Press.
2. Sharma, P C, A Text Book of Production Technology: Manufacturing Processes, 2009, S Chand Publishers.

CNC Machining (100 Hrs)

Course Title	Course Code	Type of Course	T-P-Pr	Pre-requisite
CNC Machining	CUCM2152	Practice+ Project	0-6-2	8

Objective

- To acquire CNC operations skills and accomplish various jobs with desired dimensional accuracy

Course outcome

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)

CO1	Knowledge to do CNC part programming effectively.	PO1 (3)
CO3	Able to identify and solve problems in product machining.	PO2(3)
CO4	Use of advanced CAM software	PO4(3), PO5 (3)
CO5	Research in advancement in CNC machining	PO2 (3), PO3 (2)

Course Outline

Module I Introduction to CNC (5 Hrs)

Numerical control, Functions of Machine Tool, Concept of numerical control, Feature of CNC, Machine control unit for CNC, Classification of CNC Machine Tool.

Module II CNC Fanuc Controller (20 Hrs)

CNC Fanuc Controller: Fanuc Control Panel, Modes of Control Panel, Hard Key, Soft Key, Chock, Hard Jaw, Soft Jaw, Job setting.

Module III Cutting Tools (10 Hrs)

Nomenclature of CNC Cutting Tools, Identification of Cutting Tools, Manual Cutting Operations, Offsetting and its Types.

Module IV Production Drawing (15 Hrs)

Concept of Projection, Understanding the Views, Orthographic view & Isometric View, Reading of Dimensional Tolerance and Geometrical Tolerance.

Module V NC Programming (35 Hrs)

Developing program for Facing, Turning, Taper Turning, Drilling, Boring and Threading by following Process Plan.

Module VI CNC Milling (5 Hrs)

Fundamentals of CNC Milling, Tool Magazine, ATC, Manual Part Programming for Pocketing.

Module VII 5-Axis Machining (10 Hrs)

Fundamentals of 5-Axis Machining and Turn-Mill Machining.

Text Books

1. Groover, M P, CAD/CAM Computer-Aided Design and Manufacturing, 2008, Pearson Education.
2. Radhakrishnan, P, CAD/CAM/CIM, 2018, New Age International.

Reference Books

1. Jain, R K, Production Technology, 2008, 17th Edition, Khanna Publisers.
2. Agarwal, P M, CNC Fundamentals & Programming, 2014, 2nd Edition, Charotar Publishers.

Non-traditional Machining and 3D Printing (50 Hrs)

Course Title	Course Code	Type of Course	T-P-Pr	Pre-Requisite
Non-traditional Machining and 3D Printing	CUCM2153	Practice + Project	0-2-2	Nil

Objective

- To understand the principle, mechanism of metal removal of various unconventional Machining processes

Course outcome

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Knowledge of Non-traditional machining, and additive manufacturing	PO1 (3), PO7 (1)
CO4	Hands-on practice in Product Processing & Development	PO2(3), PO9(1)
CO5	Research in advancement in Manufacturing Process	PO2 (3), PO3 (2)

Course Outline

Module I Introduction (5 Hrs)

Need of Non -traditional Machining, Classification of NTM.

Module II Electric Discharge Machining (20 Hrs)

Electric Discharge Machining Fundamentals, Machine Structure, Machine Control Panel, Machine Input and Output Parameters.

Module III EDM Process Parameters (5 Hrs)

Machining Parameters, Plotting of Output graphs, Machining of Brass and Bright Steel. Performance Characteristics, Dielectric Fluid.

Module IV Additive Manufacturing (10 Hrs)

Concept, Rapid Prototyping Process, Various Rapid Prototyping Technologies: SLA, LOM, SLS and FDM.

Module V 3D Printing (10 Hrs)

Fundamentals of 3D Printing, Machine structure and its Controller. Advantage, Disadvantage and its Applications, Performance Evaluation.

Text Books

1. Pandey, P C, Modern Machining Processes, 2008, McGraw Hill
2. Jain, V K, Advanced Machining Processes, 2010, Allied Publishers

Reference Books:

1. Abdel, H, Advanced Machining Processes: Nontraditional and Hybrid Machining Processes, 2005, McGraw Hill
2. Rao, P N, Manufacturing Technology, Volume 1, 2009, Tata McGraw Hill Publication.

Wood Engineering (25 Hrs)

Course Name	Code	Type of course	T-P-P	Prerequisite
Wood Engineering	CUCM2154	Practice	0-2-0	Nil

Course Objective

- To provide in-depth technical training & knowledge of latest processing technologies and machineries used in wood science and engineering which strengthen the Industrial-Institutional partnership
-

Course Outcome

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)

CO1		Knowledge on wood processing, equipment and machine tools.	PO1 (3)		
Sl. No.	Course Code	Course Title	Course Type	T-P-Pr	Credits
1	CUWI2160	Joining Processes & Technology	Theory + Practice + Project	2-2-2	6
2	CUWI2161	Metal Transfer & Weld Metallurgy	Theory + Practice	2-2-0	4
3	CUWI2162	Design of Welded Joints	Theory + Practice + Project	2-2-2	6
4	CUWI2163	Testing of Welded Joints	Theory + Practice + Project	2-2-2	6
5	CUAE2177	Project		0-0-6	6
6	CUAE2175	Internship		0-0-4	4
Total					32
CO4		Hands-on practice in Advanced machine tools	PO1 (3), PO2(3), PO4(2)		
CO5		Research Developments in Wood Engineering and Technology	PO2 (2), PO4 (3)		

Course Outline

1. Introduction, Safety and serviceability, Measurements & Marking
2. Identification of Timber & Hand Tools
3. Maintenance & Sharpening of Tools, Fasteners Carpentry hand tools and their maintenance.
4. Wood joints and Structural assemblies
5. Advanced Tools in Tool Engineering (Basic working principles and Operations)
6. Product Development: Interior Designs, Furniture, Structures & construction.

Text Books

1. Williamson, T G, Wood Engineering and Construction Handbook, 2016, McGraw Hill.
2. Garg, S K, Comprehensive Workshop Technology (Manufacturing Processes), 2008, Laxmi Publications.

Reference

1. John, K C, Mechanical Workshop Practice, 2nd Edition, 2010, PHI Learning Pvt.Ltd.

2. Hasluck, P N, Working with Hand Tools: Essential Techniques for Woodworking, 2012, Skyhorse Publishing.

DOMAIN TITLE: Welding and Inspection (WICU2160)

Domain Track Objectives:

1. To develop understanding and skill of students for Welding Technology
2. Students pursuing this domain will be ready for industrial employment
3. The students develop passion for higher education and research in Welding Engineering

Domain Track Course Outcomes:

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO5	Students are able to recognize with certification of Welding from various national and international levels industry.	PO4(3)
CO4	Students able to be self-employable skills to become an entrepreneur with small scale to a medium scale welding units.	PO11(3)
CO2	Ability to suggest and handle various weld joints based on Strength, Failure and Reliability	PO1(3)

Joining Processes & Technology

Course Title	Course Code	Type of Course	T-P-Pr	Pre-Requisite
Joining Processes and Technology	CUWI1260	Theory+Practice + Project	2-2-2	Nil

Course Objectives:

1. To learn about basic welding processes such as Arc Welding, Solid Phase Welding, High Energy Density Welding
2. To learn about welding power source

Course outcomes

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Able to gain knowledge on various types of welding processes and its applications	PO1(2)
CO4	Use of tools and welding power source	PO5(1)

Course content

Module-I (29 Hours)

Welding classification, advantages, disadvantages and applications of various welding processes, Gas Welding & Cutting: Oxy-acetylene welding, flux and filler, types of gas flames, Gas welding techniques, Arc welding: Physics of arc welding, SMAW Principle and equipment, types of electrodes, functions of coatings, TIG (GTAW), MIG (GMAW) & flux-cored arc welding, submerged arc welding, weld cladding & surfacing, plasma cutting and spraying, atomic hydrogen welding.

Practice:

1. Identification and working of gas welding equipment
2. Identification and working of gas cutting equipment
3. Identification and working of arc welding equipment
4. Identification and working of TIG welding equipment
5. Identification and working of MIG welding equipment

Module-II (28 Hours)

Resistance Welding: Spot and seam welding parameter, flash butt welding, friction welding, explosive welding, thermit welding of rails, electro-slag welding, electro-gas welding, stud welding, projection welding. Other Welding Methods like plasma arc, laser beam, electron beam, ultrasonic, explosive welding, under water welding, high frequency induction welding.

Practice:

1. Identification and working of spot welding machine parts

MODULE-III (26 Hours)

Welding Power Source: Electricity in welding, power source and equipment used for AC, DC welding, AWS classification and coding, Welding positions, types of joints, Residual stress, Identifying defects and remedial measures for welded joints.

Practice:

1. Identification and working of power source for welding equipment in AC and DC
2. Practice in different welding positions 3
3. Practice for producing different types of welded joint

Text Books:

Welding & Welding Technology by R.L.Little.1976. Tata McGraw Hill Education Private Limited
2. Welding Technology by R. S. Parmar, 3rd Edition, Reprint 2011, Khanna Publishers,
3. AWS Hand Book, Volume- 1, 2 and 3 , 9th Edition, American welding society

1. **Reference Books:** 1. Manufacturing Engineering and Technology by Serape. K. Kalpak Jain, Pearson Edition

Metal Transfer and Weld Metallurgy

Course Title	Course Code	Type of Course	T-P-Pr	Pre-Requisite
Metal Transfer and Weld	CUWI1261	Theory+Practice +	2-2-0	Nil

Metallurgy		Project		

Course Objectives:

1. To learn about basic welding processes such as Arc Welding, Solid Phase Welding, High Energy Density Welding
2. To learn about welding power source

Course outcomes:

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Able to gain knowledge to Suggest suitable welding parameter like current, voltage and welding speed for a weld bead	PO1(2)
CO3	Analysing and Identify welding defects and rectifying	PO4(3)

Course content

Module-I (27 Hours)

Metal transfer - Metal transfer in AC and DC arc welding, metal transfer in TIG, MIG and MAG welding, Study of different modes of metal transfer in MIG welding (Practice), Welding defects due to improper metal transfer and improper filler material, Diffusion in Soldering and Brazing. 343

Practice:

1. Metal transfer in TIG welding
2. Different modes of Metal transfer in MIG welding
3. Welding defects in TIG welding
4. Welding defects in MIG welding

Module-II (28 Hours)

Weld Metallurgy - Fe-C equilibrium diagram, Cooling curve, HAZ, Microstructure, Preheat & post heat treatment, Stress relieving and normalizing, Weld-ability: concept and significance, Percentage equivalence of carbon in weld-ability.

Practice:

1. Practice on stress relieving and normalising in welding
2. Experiments for demonstrating weld-ability

MODULE-III (26 Hours)

Weld ability of other metals - Defects in welded joints- hot cracks and cold cracks, porosity, embrittlement, lamellar tearing, distortion etc. weld ability of low carbon steels, HCS. Weld ability of stainless steels, weld ability of titanium and alloys, weld-ability of high strength low alloy steels. Heat treatment of welded structures, shot pinning, stress relieving through vibration. Ultra-sonic welding for dissimilar metals

Practice:

1. Identification of general welding defects
2. Heat treatment of welded structures

Text Books:

Welding Technology by R. S. Parmar. 3rd Edition, Reprint 2011, Khanna Publishers, 2.

Welding Metallurgy by J.F. Lancaster, 6th Edition, WOODHEAD Publishing Limited

Reference Books: 1. Manufacturing Engineering and Technology, Serape. K. Kalpak Jain
Pearson Edison

Design of Welded Joints

Course Title	Course Code	Type of Course	T-P-Pr	Pre-Requisite
Design of Welded Joints	CUWI1262	Theory+Practice + Project	2-2-2	Nil

Course Objectives:

1. To learn about design of welded joint according to strength
2. To know the use of welding module in CATIA

Course outcomes:

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Able to gain knowledge to Suggest suitable welds based on strength, failure and reliability	PO1(2)
CO2	Problem analysis based on weld strength, failure and reliability	PO1(3)
CO4	Design /development of solutions: Can produce welding design as per requirement	PO3(3)
CO8	Using soft skill catia for designing of welded joints	PO5(2)

Course content

Module-I (16 Hours)

Design of weld joints - Introduction to design; engineering properties of steels; Type of welds and weld joints; description of welds: terminology, definitions and weld symbols; sizing of welds in structure, welding symbols and definition.

Module-II (14 Hours)

Weld Calculations - Design for Static loading, Weld Calculations in lap, butt and fillet welds; design for fatigue loading, Introduction to Fatigue; nature of the fatigue process; fatigue strength;

factors affecting fatigue life; improvement methods for fatigue strength; reliability analysis and safety factors applied to fatigue design.

Practice:

1. Design of lap joint
2. Design of butt joint

MODULE-III (21 Hours)

Mechanisms of Failure - Failure mechanisms in welded joints, How to design various kinds of welding joints. Design of a butt joint, the main failure mechanism of welded butt joint, tensile failure of weld, Design of transverse fillet joint, Shear mechanism in fillet weld, Design stresses of welds. Use of CATIA Weld Design Module 345

Practice:

1. Tensile testing of welded joints
2. Bend test of welded joints

Text Books:

1. Lecture Notes
2. ASME section IX, IBR Software Used: CATIA

Testing of Welding Joints

Course Title	Course Code	Type of Course	T-P-Pr	Pre-Requisite
Testing of welding joints	CUWI1263	Theory+Practice + Project	2-2-2	Nil

Course Objectives:

1. To enable students to understand the mechanical strength and metallurgical properties of welded structure
2. Knowledge about international welding standards

Course Outcomes:

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO5	Performing experiments like non-destructive testings and destructive testings	PO4(3)

Course content

Weld Defects and NDT Welded Joints.

ASME Section IX

WPS and PQR

Practice:

Destructive Tests:

Experiment 1 Tensile test using Standard Equipment.

Experiment 2 Impact test using Standard Equipment

- Experiment 3 Bend test using Standard Equipment
- Experiment 4 Hardness test using Standard Equipment

Non Destructive Tests:

- Experiment 5 Visual Inspection
- Experiment 6. Liquid Penetrant Test
- Experiment 7 Magnetic Particle Inspection

Microstructure:

- Experiment 8 Analysis of Microstructure by Image Analyzer
- Experiment 9 Analysis of Microstructure by SEM

Course Structure & Syllabus

CFD – Domain

Code	Subject	Course Type	Credit
CUCF2180	Introduction to CFD	T-P-Pj(2+0+1)	3
CUCF2181	Grid Generation	T-P-Pj(0+2+0)	2
CUCF2182	Flow Solver Techniques-Simulia	T-P-Pj(0+3+1)	4
CUCF2183	Simulation and Validation	T-P-Pj(0+5+0)	5
CUCF2184	Industry Specific Project	T-P-Pj(0+0+6)	6
	TOTAL CREDITS	T-P-Pj(2+10+8)	20

Domain Track Title: Computational Fluid Dynamics

Track Total Credits-20 (2+10+8)

Course Division (List all divisions):

1. CUCF2180 Introduction to CFD (2+0+1)
2. CUCF2181 Grid Generation (0+2+0)
3. CUCF2182 Flow Solver Techniques-Simulia (0+3+1)
4. CUCF2183 Simulation and Validation (0+5+0)
5. CUCF2184 Industry Specific Project (0+0+6)

Domain Track Objectives:

- To provide the knowledge of CFD in the Industrial Level.
- To apply CFD methods as a tool for design, analysis and engineering applications.

Domain Track Course outcomes:

- To impart knowledge about various computational methods for fluid flow and heat transfer problems so as to enable the students to write computer programs for solving elementary fluid dynamics/heat transfer problems.
- To execute the industry projects so as to produce Quality products to the Clients.

Domain Syllabus:

1. Introduction to CFD (2-0-1)

Module-1

Fluid, Properties of Fluid (Temperature, Vapour Pressure, Viscosity, Specific Gravity, Compressibility, Speed of Sound, Density, Energy, Specific Heat, Newtonian and Non-Newtonian Fluids)

Module-2

Lagrangian and Eulerian Approaches, Classification of Fluid Flow (Inviscid vs. Viscous, Laminar vs. Turbulent, Incompressible vs. Compressible, Internal vs. External, Steady vs. Unsteady, Rotational vs. Irrotational, 1D, 2D and 3D Flows)

Project 1. Case studies in industrial pipe flows.

Module-3

Governing Equations of Flow Field (Conservation of Mass, Momentum (Navier-Stoke Equation) and Energy)- Differential Form, Integral Form.

Project 2. Case studies and generation of drag and lift for flow over bodies.

Module-4

Flow Features (Stagnation, Boundary Layer (Laminar to Transition to Turbulent), Flow Separation), Drag & Lift forces, Types of Boundary Conditions.

Project 3. Case studies in different types of aerofoil and its applications.

Module-5

Heat Transfer in Fluid (Conduction, Convection (Natural, Forced), Radiation), Non-dimensional Quantities, Grid Generation, Flow Similarity between Prototype and Model.

Project 4. Case studies for various non-dimensional quantities and its importance in CFD.

Module-6

CFD and its applications, Discretization methods for the CFD (FDM, FVM, FEM, Hybrid Methods).

Project 5. Case studies for the various applications of CFD and its significance.

Module-7

Turbulence Modelling, CFD Solution Tool Chain

Project 6. Case studies for the different turbulence modelling in CFD.

2. Grid Generation (0-2-0)

2.1 Introduction to Meshes- CFD Meshing Basics

2.2 Different Element Shapes- Creating, Managing & Updating Meshes

2.3 CFD Meshing- 2D Mesh, 3D Mesh, Mapped Face Meshing,

Practice 1. 2D mapped Mesh for rectangular pipe

Practice2. 2D mapped Meshing for Aerofoil.

2.4 Structured Meshing, Un-Structured Mesh, Sweep 3D Mesh

Practice 3. 3D structure mesh of Circular Cylinder

Practice 4. 3D unstructured mesh with prims layers for Aerofoil

Practice 5. 3D coarse/ medium/ fine sweep mesh for pipe

Practice 6. 3D coarse/ medium/ fine unstructured Octree Tetrahedron mesh for Aerofoil.

Practice 7. 3D hex- dominant mesh for rectangular Duct.

2.5 Visualization the Mesh- Visualization Management, Mesh Visualization Options, Section, Clipping Box, Mesh colour, Element shrink

2.6 Reviewing the Mesh- Quality Analysis, free Edges, Interfaces, Duplicate Checker, Isolate Node Checker

Practice 8. 3D hex-dominant with surface mesh, Boundary prim mesh for DS car.

Practice 9. 3D Tetrahedron filler mesh Narrowing pipe.

Practice 10. 3D Tetrahedron, surface, for Electronics Module.

Practice 11. 3D Sweep mesh for circular cylinder.

Practice 12. 3D mesh generation for Subsonic Converging-diverging Nozzel.

Practice 13. 3D Sweep mesh generation for U-Bend pipe.

Practice 14. 3D mesh generation of Dimple Ball.

Practice 15. 3D mesh generation of a wedge body.

3. Flow Solver Techniques-SIMULIA (0-2-1)

3.1 Overview-Fluid Dynamics Engineer Essentials

- Connecting to the platform, Assigning roles and Apps, Platform Interface, Importing 3D XML file, Simulation Conventions in the 3DEXperience Platform

Practice 1. Getting Started with the 3DEXperience Platform.

3.2 Import an assembly

- Explore the imported assembly, Renamed the assembly, Search for parts/assemblies in the database, open parts/ assemblies found through search, duplicate, delete and save entities, Import a 3D XML file containing fluid materials, Create and save a new material.

3.3 Fluid Dynamics Engineer Role Overview

- Exploring Fluid Dynamics Engineer Role Apps, CFD simulations work flow, Model preparations, Material definitions, Meshing, CFD analysis, Analysis convergence, co-simulation Analysis, Post processing results, CFD solver validations.

Practice 2. CFD analysis of steady state internal Laminar Pipe flow.

Project 1. Analysis of pipe flow at $Re = 500$.

3.4 Getting Started with CFD Simulations

- Fluid Model Creation, Fluid Scenario Creation App Interface, Model setup, applying meshing, Scenario Setup, Results visualizations, Reviewing Simulation Features,

Practice 3. CFD analysis Steady-state external flow over an Airfoil.

Project 2. Analysis of 2D cylinder in a rectangular domain with varying radius and height.

3.5 Geometry for CFD Simulations

- Geometry Preparation- Check and Repair, Defeature Idealize, Create, Healing, Join, Local Join, surface connection Checker, Face checker, Mid surface

Practice 4. Modeling of Air intake system.

Practice 5. Extracting Fluid volume for Engine Manifold.

3.6 Material and Section Properties of Fluid

- Understanding materials, working with materials, Creating a new Material, Applying a Material, Adding New Domains, Editing a Material Domain, Simulation Domain, Material Behaviors in a Simulation Domain, Section Properties, working with Imported Meshes

3.7 Defining Physics of Fluid

- Analysis Procedures- Enabling Temperature, Compressible, Coupled vs Segregated solver, Gravity effects.
- Turbulence Modelling- SST k-w, Realizable k-e, Spalart-Almaras, Radiation Modeling, Steady-state Analysis, Transient Analysis- Courant-Freidrichs-Levy (CFL) condition, Grid Independence Study, Bad cell Treatment

Practice 6. Grid Independence study for above cases (pipe / airfoil) using different solver schemes.

Project 3. Analysis of flow an over a circular cylinder at $Re=10^7$.

Practice 7. Conjugate Heat Transfer (CHT) Analysis of an Electronics Module.

Project 4. Analysis of temperature rise through cross flow heat exchanger.

3.8 Boundary and Initial Conditions

- Boundary Conditions, wall boundary conditions, Thermal wall boundary, Initial Conditions, Initializing Compressible flows, Turbulence Specifications at Boundaries, Surface- to – surface Radiation specification at Boundaries, Time- dependent Boundary Conditions, Spatially- Varying Boundary conditions, User defined Boundary conditions.

3.9 Turbulence Modeling & Modeling Techniques.

Practice 8. Aerodynamics analysis of DS car.

Practice 9. Unsteady Flow across a Circular Cylinder.

Practice 10. Transonic Flow over an Airfoil.

Project 5. Analysis and estimation of Drag lift coefficients flat plate at $Re=10,000$.

3.10 Solution Convergence

Practice 11. Cavitating Flow through a Narrowing Pipe.

Project 6. Analysis of compressible flow nozzle with atmospheric pressure at the nozzle exit.

3.11 Post-processing Results.

Practice 12. Creating Post processing reports for all the above cases.

4. Simulation and Validation (0-4-0)

4.1 Fluid flow in the rear duct of an automotive HVAC system.

4.2 CFD Analysis of an Air intake system.

4.3 CFD Steady-state External flow over a Drone in cruise.

4.4 DE featuring of a Lens Component.

4.5 CFD analysis for Conjugate Heat Transfer in a fan –cooled CPU Board.

4.6 CFD analysis Energy computations in a Contact Analysis.

4.7 Thermo-mechanical Analysis of a Laser Powder Bed Fusion Build.

4.8 CFD analysis in Turbulent pipe flow.

4.9 CFD Supersonic flow analysis for 3D cone.

4.10 CFD analysis over a Ahmed body.

5. Industry Specific Projects (0-0-6)

(Selected Projects will be carried out)

- 5.1 CFD Analysis of economizer in a tangential fired boiler.
- 5.2 Analysis and comparison of vertical tube with smooth tube.
- 5.3 A CFD-based analysis of the 14-bis aircraft aerodynamics and stability.
- 5.4 CFD analysis of gas flow behaviour in economizer duct.
- 5.5 Combined aerodynamic and structural optimization of a high-speed civil transport wing.
- 5.6 Fluid flow and temperature distribution in radiators used in automobiles.
- 5.7 Analysis of Cyclone dust collector air flow.
- 5.8 CFD analysis of shell and tube heat exchanger with fins for waste heat recovery application.
- 5.9 A theoretical analysis and CFD simulation on the on the ceramic monolith heat exchanger.
- 5.10 Analysis of water flow for Laminar & Turbulent Flow in Conventional Water Tap.
- 5.11 CFD Investigation of Airflow on a SANTRO Zing Car by using Fluent.
- 5.12 CFD analysis of rocket nozzle.
- 5.13 CFD analysis of supersonic exhaust in a scramjet engine.
- 5.14 Aerodynamic Design for Bus/Car Vehicle.
- 5.15 CFD analysis of exhaust manifold.
- 5.16 CFD analysis of centrifugal fan.
- 5.17 Analysis of intake manifold in SI engines.
- 5.18 CFD modelling of the automobile catalytic converter.
- 5.19 CFD analysis of fluid flow and heat transfer in a single tube-fin arrangement of an automotive radiator.
- 5.20 Computational flow field analysis of a vertical axis wind turbine.

DOMAIN TITLE: Composite Design and Manufacturing

Sl. No.	Course Code	Course Title	Course Type	T-P-Pr	Credits
1	CUCD2130	Introduction to Composite	Theory	2-0-0	2
2	CUCD2131	Biovia - Composite materials and characterization techniques	Practice	0-2-0	2
3	CUCD2132	Catia-Composite design	Practice	0-4-0	4
4	CUCD2133	Composite product validation Simulia Abaqus FEA	Practice	0-4-0	4
5	CUCD2134	Machineries and technologies used for manufacturing of composite	Theory	2-0-0	2
6	CUCD2135	Quality control and fabrication of composite structure	Theory + Practice	2-2-0	4
7	CUCD2136	Project	Practice	0-0-6	6
Total					24

Domain Track Objectives:

1. To learn the type of composite material and different technique to fabricate
2. To design of a composite part and simulate the design.
3. To test the composite part and validate the materials with quality check.

Domain Track Learning Outcomes:

1. Students will get familiarized with the concept, classification and application of Composite.
2. They will be able to do part design of composites using 3DExperience Platform
3. Students will be able to design a composite using Materials Studio.
4. Students will know how to test a composite and check the product quality.

Introduction to composites

Code	Course Title	T-P-Pj (Credit)	Prerequisite
CUCD2130	Introduction to composites	3-0-1	

Objective

- To Learn basic idea of composite material and fabrication techniques and classification

Course Outcome

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Able to gain knowledge on various type of composite materials, its fabrication technique	PO1(2)
CO4	Able to identify design parts, tools to prepare, gain skill on material selection	PO2(3)

Course content

Module –I (7 Hours)

Introduction to polymer, Introduction to composite, Classification: Particulate composite, Classification: Fiber reinforced composite, Polymer matrix composites, Metal matrix composites, Ceramic matrix composites, Nature-made composites, Applications: Fiber glass Applications: Fiber glass Applications: Silica Applications: Kevlar, Carbon Applications: Boron, Silicon Carbide

Module-II (6Hours)

Constituent materials for composite, Basic structural application of Composite, Advanced structural application of Composite,

Module-III(6Hours)

Multifunctional Applications of Composites, Fabrication Processes, Elements of Mechanical Behavior of Composites, Review of Basic Mechanics of Materials Equations

Book Suggested:

- Composite material and structure, By PK Sinha, Wiley Publications
- Introduction to composite Ever J. Barbero, Wiley Publications

Biovia - Composite materials and characterization techniques

Code	Course Title	T-P-Pj (Credit)	Prerequisite
CUCD2131	Biovia - Composite materials and characterization techniques	0-2-0	Nil

Objective

- Learn design of a composite material and design a system using the composite.
- To test the composite and control quality.

Course Outcome

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Able to gain knowledge on various type of composite materials	PO1(3)
CO2	Able to think theoretically about the materials combination for composite part	PO3(3)

Course content

Module –I (25 Hours) Practice

Polymer menu

Build menu using new molecule Blends menu Synthia menu

Polymer-polymer composite

Nanoparticle-polymer composite

Inorganic composite

SEM analysis

FTIR analysis

XPS analysis

Gaussian menu

Reflex menu

CATIA-Composites Design

Code	Course Title	T-P-Pj (Credit)	Prerequisite
CUCD2132	CATIA-Composites Design	0-4-0	Nil

Objective

To Learn design of a composite material and design a system using the composite. To test the composite and quality checking.

Course Outcome

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Able to gain knowledge designing the part of composites using 3D Experience Platform	PO1(3)
CO4	Able to use software tool and validate the parts	PO3(3)

Course content

Module –I (35 Hours) Practice

Composite Part Design topics: Preliminary design, Manual Ply Creation, Zone Design, ply Management, Mirroring, Creating IML's & Solids, Analyzing Drop Off and Slicing, composite Grid Design, Grid Panel Definition, Grid Definition, Virtual Stacking Management, Plies Generation, Grid Ramp Support Definition, Remove Useless Ramp Supports, Swap Edge, Reroute Ply Contour, define Local Drop Off, Create Standard Contour, Define No Drop Off Area, Synchronize Stacking, Limit Plies from Panel Limits, Creating a Manufacturing Document, Synchronizing, Skin Swapping, Defining the Edge of Part, Material Excess, Producibility Flattening, Flatten Optimization, Geometry Transfer, Producibility Inspection, Fibre Direction, Unfold Entity, Splicing and Splice Zones, Darting, Exporting, Exporting Ply Data as IGES or DXF, XML Export, Drafting Standards, Creating a Ply Book, Adding Material to Plies, Stagger Origin Points, Grid Angle Cut.

Composite Product Validation; Simulia(Abaqus FEA)

Code	Course Title	T-P-Pj (Credit)	Prerequisite
CUCD2133	Composite Product Validation; Simulia(Abaqus FEA)	0-4-0	

Objective

- Learn design of a composite material and design a system using the composite.

Course Outcome

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Able to identify problem and familiar with 3D Experience Platform	PO2(3)
CO4	Able to use design tool, test a composite and validate the product	PO3(3)

Course content

Module –I (7 Hours)Practice

Defining a Problem

Defining anisotropic elasticity with Hookean models for combining the fiber-matrix response

Defining composite layouts using Abacus/CAE

Defining discrete or layered reinforcing within an element using rebar

Membrane elements and truss elements

Achieving the correct material orientation of the layers of composite shells

Modeling sandwich composite structures

Modelling stiffened composite panels

Define No Drop Off Area, Synchronize Stacking, Limit Plies from Panel Limits

Modeling progressive damage and failure in composites

Modeling delamination of composite structures

Modelling low cycle fatigue of composite structures

Machineries and Technologies used for Manufacturing of Composites

Code	Course Title	T-P-Pj (Credit)	Prerequisite
CUCD2134	Machineries and Technologies used for Manufacturing of Composites	2-0-0	

Objective

- Learn machineries and lab scale method to fabricate composite.

Course Outcome

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO2	Able to gain skill about the machinery part for composite fabrication	PO3(3)
CO4	Able to use design tool, fabricate a composite	PO3(3)

Course content

Module –I (7 Hours)

Introduction

Basics of Laminates, which have layers bonded together

Sandwiches

Open Mold Processes-

Hand layup process

Module –II (7 Hours)

Spray Bag, Vacuum Bagging

Automated tape laying machine,

Pressure bag molding

Closed Mold Processes

Filament Winding

Pultrusion Processes

Module –III (7 Hours)

PMC Shaping Processes.

Application of Pultrusion Process

Comparison between open and closed mold process

Book Suggested:

1. Machining Composites Materials, JP Davi, Wiley Publication

2. Mechanics of Composite Materials, Autar K. Kaw, Taylor and Francis

Quality control and Fabrication of Composite Structure

Code	Course Title	T-P-Pj (Credit)	Prerequisite
CUCD2135	Quality control and Fabrication of Composite Structure	2-2-0	Nil

Objective

To test the composite and control quality

Course Outcome

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO3	Able to monitor the quality and material specification	PO3(2)
CO4	Able to use tool composite fabrication and monitor the properties	PO5(3)

Course content

Module –I (7 Hours)

Monitoring material property variations over time

Define minimum standards for aerospace grade fiber, resin, fabric/braid

Define minimum standards for aerospace prepreg – Material qualification, material specification, process control document

Factors affecting Quality of Composites made by hand lay-up

Module –II (7 Hours)

Factors affecting fabrication factors, stacking sequence, fiber volume fraction, cure

Material selection criteria for new generation aircraft

Structural Requirements for Certification,

Material Qualification Procedures, Material Property Development

Material Screening and Selection,

Material and Process Specification Development

Module –III (7 Hours)

Material and Process Control, QCs for Composite Part Manufacturing, Material Acceptance

Mechanical test of laminates and sandwiches

Test for adhesives and sealants

Chemical and physical tests for material composition

Thermal analysis for composite materials

Module –IV (7 Hours)

Aging tests by chemical aging

Thermal and humidity aging

Radiation aging test

Reappear test, fire and smoke test

Non-destructive test, Ultrasonic Phased Array test, 2D X-Ray test on field

Practice

- Fabrication using Natural Fibre
- Fabrication using glass fiber
- Fabrication using carbon fiber
- Fabrication processes for polymer matrix composites (PMC)
- Matched Die mold
- Contact Mould, Filament Winding
- Pultrusion
- Fabrication processes for metal matrix composites (MMC)
- Diffusion Bonding, Powder Metallurgy Process, Casting
- Fabrication processes for ceramic matrix composites (CMC)
- Hot Press Sintering, Liquid Infiltration
- Sintering, Chemical Vapour Deposition Process

Suggested Book:

1. Composite Materials and Structural Analysis, NGR Iyengar, My learning publication
2. Composite Structures: Effects of Defects, Rani Elhajjar, Wiley Publication

Project

Code	Course Title	T-P-Pj (Credit)	Prerequisite
CUCD2136	Project	0-0-6	Nil

Course Outcome

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO4	Able to use design tool, fabricate a composite	PO3(3)
CO5	Able to do research, fabricate the product and interpret the data	PO4(3)

***Go To Market(End to End Product Design, Simulation &Validation: will go through Gate process)**

Course Outline

Code	Course Title	T-P-Pj (Credit)	Prerequisite
MLCU2000	Data Science and Machine Learning	2-9-15	NIL

Course Objective

- Understand the scope, stages, applications, effects and challenges of ML.
- Understand the mathematical relationships within and across ML algorithms and the paradigms of supervised and unsupervised learning.
- Able to get jobs in AI/ML field

Course Outcome

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Able to gain knowledge on design and implementation of various machine learning algorithms in a range of real-world applications.	PO1 (3)
CO2	Able to analyze prediction and classification using different ML and deep learning methods	PO2(3)
CO3	Ability to solve the real world problems using ML solutions in their respective fields of study.	PO2(3)
CO4	Ability to design product	PO3 (2), PO5(2)
CO5	Able to do research for publishing articles/ file patents.	PO4 (3)

Course content

ML for Predictive Analysis (0+2+2)

<https://careerfoundry.com/en/blog/data-analytics/regression-vs-classification/>

Project/Task: (Choose two projects, Prediction and Classification)

Time Series Analysis

Health Care System

Concept Required:

3.1 Data pre-processing: -

- Accessing / collecting the datasets from different online repository.
- Missing values handling, noise reduction, finding Correlation between features, outlier elimination.
- Label Encoding / Encoding the categorical data
- Splitting the dataset
- Data Normalization

3.2 Learning Algorithms: -

- Supervised Learning Algorithms
- Unsupervised Learning Algorithms

3.3 Feature extraction and selection: -

- Principal Component Analysis (PCA)

- Linear Discriminant Analysis (LDA)
- Different Feature Selection Techniques / Algorithms

3.4 Model building: -

- Regression (Linear, Polynomial, multiple, logistic), Decision Tree, Random Forest.
- Artificial Neural Network (Feed Forward Neural Network, Gradient Descent, Back Propagation Neural Network).
- Convolutional Neural Network
- Other Pretrained Models

3.5 Performance measures: -

- Perdition: Root Mean Square Error (RMSE), Average Percentage Error (APE), Mean Average Percentage Error (MAPE).
- Classification: Confusion Matrix (TN, TP, FP, FN), Sensitivity, Specificity, Gmean, F-score, Overall Accuracy, (Receiver Operating Characteristic) ROC Curve. Area under Curve (AUC)

3.6 Reading and Writing Research Articles

ML for Image Analytics (0-2-2)

Project/Task: (Choose one among six Tasks)

Detection of optometry diseases using retinal fundus imaging.

1. Diabetic Retinopathy
2. Glaucoma
3. Cataract

Detection of various diseases using X-ray imaging.

1. Covid19

Leaf disease classification using RGB images.

1. Tomato leaf
2. Potato leaf

Concept Required:

Image Pre-processing:-

- Accessing individual pixels using matrix concept
- Image resize, grey scale conversion, Colour channel splitting
- Histogram equalisation (CLACH).

Image Feature Extraction: -

- Edge detection (Sobel, Canny), Morphological operations
- Image segmentation, Image Thresholding, Binary conversion
- Cluster based segmentation
- Feature extraction based on size, shape and colour

- Feature extraction using predefined functions: SIFT, SURF, STAR, ORB.
- Feature Extraction using convolutional neural network (CNN).

Creation of Feature Matrix by combining Extracted Features: -

- Matrix flattening, Horizontal stacking, Vertical stacking, padding.
- Splitting the feature matrix (training/testing) and labelling.

Classification algorithms: -

- Support vector machine (SVM)
- Different kernels of SVM (linear, polynomial, radial basis function).
- Gradient Boosting (GB)
- Multi-layer Perceptron (MLP), deep learning.

Mathematics for ML (2+1+0)

When Models Meet Data:-

- Data, Models, and Learning
- Empirical Risk Minimization
- Parameter Estimation
- Probabilistic Modeling and Inference
- Directed Graphical Models
- Model Selection

Linear Regression:-

- Problem Formulation
- Parameter Estimation
- Bayesian Linear Regression
- Maximum Likelihood as Orthogonal Projection

Dimensionality Reduction with Principal Component Analysis:-

- Problem Setting
- Maximum Variance Perspective
- Projection Perspective
- Eigenvector Computation and Low-Rank Approximations
- PCA in High Dimensions
- Key Steps of PCA in Practice
- Latent Variable Perspective

Density Estimation with Gaussian Mixture Models:-

- Gaussian Mixture Model
- Parameter Learning via Maximum Likelihood
- EM Algorithm
- Latent-Variable Perspective

Classification with Support Vector Machines:-

- Separating Hyperplanes
- Primal Support Vector Machine
- Dual Support Vector Machine
- Kernels
- Numerical Solution

Practice:

- Curve Fitting in Python.
- Exploratory Data Analysis in Python.
- Kernel Density Estimation in Python.
- Probability Distribution Function Plotting in Python.
- Cumulative Distribution Function Plotting in Python.
- Dimensionality Reduction and Feature Extraction in Python.

IoT Analytics (0+2+2)

Defining IoT Analytics and Challenges

IoT

Benefits of Deploying IoT

End to End IoT architecture

IoT challenges

IoT Protocols

1 Wireless Protocol

Connectivity Protocols (when Power is Limited)

Bluetooth Low Energy (BLE)

Zigbee

LoRaWAN

NFC

2 Connectivity Protocols (when Power is Not a problem)

Wifi

3 Data Communication Protocol

MQTT

Web-Socket

HTTP

2 Sensors

Types of Sensors based on communication-I2C, SPI

Types of Sensors based on Application

3 Overview of 32-bit Controller

ESP8266

ESP32

Raspberry Pi

4 AWS IoT for Cloud

AWS IoT Core services

AWS IoT Analytics services

AWS DynamoDB Services

5 Thingspeak for IoT

Getting and posting Data to IoT Cloud using ESP devices

Posting Data to IoT Cloud using Raspberry Pi

6 ThingWorx for Industrial IoT

Building Dashboard on Thingworx platform

Binding the sensor value to the dashboard

Text Book:

1. Minter, Andrew. *Analytics for the Internet of Things (IoT)*. Packt Publishing Ltd, 2017.

Reference Books:

2. Geng, Hwaiyu, ed. *Internet of things and data analytics handbook*. John Wiley & Sons, 2017.

Digital video Processing (0+2+1)

UNIT 1:

Fundamentals of Video Processing: Digital Video Acquisition, Principles of Color Video, Video Camera, Video Display, **Analog Vs Digital Video:** Progressive Vs Interlaced scans, Signal, Bandwidth Characterization of a Digital Video Signal.

Practice:

- Read and play video files
- Extract frames from video files
- Combine frames to create a video file

UNIT 2:

Fourier Analysis of Digital Video Signals: Spatial and Temporal resolution, Fourier Analysis of Digital Video Signals, **Spatial-Temporal Sampling:** Temporal Frequency Response and Flicker Perception. Spatial Frequency Response, Spatiotemporal Frequency Response, Smooth Pursuit Eye Movement

Prctice:

- Applying fourier transformation on video
- Time domain analysis
- Frequency domain Analysis

UNIT 3:

Digital Video Formats: Significance of Video Formatting, Data rate and bandwidth trade-off,

File Formats: MP4, MOV, WMV, AVCHD, FLV, AVI, WebM, MKV

Digital Video Compression Standards: Digital Video Compression Metrics, Digital Video Storage Precisions, Significance of Video compression, **Video Compression Codec's:** Motion JPEG, JPEG 2000, H.264/MPEG-4 AVC, VP8, HEVC, H.265 High Efficiency Video Codec.

Prctice:

- Conversion of video files from one format to another.
- Using Motion JPEG Codec
- Using MPEG-4 Codec
- Using H.265 Codec

UNIT 4:

Digital Video Editing Basics: Video Editing Types- Online, Offline, Linear, Non-linear, Assemble, Insert, Rough-cut, Video Shot Transition Effects: Cut, Fade, Wipe, Dissolve, B-roll, Video Shot Boundary Detection Methods: pixel differences, statistical differences, histogram comparisons, edge differences and motion vectors. Video Shot Detection Performance Metrics: ROC Curves, Recall, Precision, F-Measure

Practice:

- Video Shot Detection using pixel Difference
- Video Shot Detection using Histogram based methods
- Video Shot Detection using Edge based methods
- Video Shot Detection using Motion Vectors

Project List

1. Creating a VIDEO object detection system
2. Vehicle detection in Videos using OpenCV and Python
3. Detecting faces in live camera feed with identification of the person.

TEXT BOOK:

1. Rafael C Gonzalez and Richard E Woods, “Digital Image Processing”, Pearson Education, 3rd Edition, 2009.
2. Handbook of Image and Video processing - Al Bovik (Alan C Bovik), Academic Press,

REFERENCE BOOK:

2. “Digital Image Processing”, William. K.Pratt, Wiley Interscience, 2nd Ed, 1991.

MI for Hyperspectral imaging (0-4-2)

Project/Task: (Choose one among four Tasks)

Agriculture

1. Crop yield prediction.
2. Crop quality prediction
3. Soil health monitoring

Mining

1. Iron ore quality prediction

Concept Required:

Introduction to Remote Sensing: -

- Multi-Spectral Imagery (MSI)
- Hyperspectral Imagery (HSI)

Scientific Principles:

- Physics of imaging spectroscopy
- Electromagnetic propagation
- Sensor physics
- Atmospheric Corrections.

Hyperspectral Concepts and System Trade-offs:-

- Signal-to-Noise ratio (SNR)
- Spectral resolution, sampling.

HSI Data Processing Techniques:-

- Spectral angle mapping
- Principal Component Analysis (PCA)
- Minimum Noise Fraction (MNF)
- Spectral feature fitting.

Classification Techniques:-

- Support Vector Machine (SVM)
- Partial Least Squares Regression (PLSR)
- Neural Network
- Deep learning and CNN

Clustering Techniques:-

- K-mean clustering

Code	Course Title	T-P-Pj (Credit)	Prerequisite
STCU2010	Software Technology	0-9-11	• Java Technologies • Advanced Web Programming

Courses Division (list all divisions):

- 1: Web Services Using JAVA (0-4-1) 75 hours
- 2: Advanced JAVA Programming (0-3-1) 60 Hours
- 3: Web Programming Using AngularJS (0-2-1) 45 hours
- 4: Product Development (0-0-8) 120 hours

Objective

Key points: *Briefly explain why the course is to be studied. Specify who should study the course and requirement of prior knowledge and skill, if any.*

- Develop knowledge-based force to serve the IT industry with the latest technologies.
- To explore methods of capturing, specifying, visualizing and analyzing software requirements.
- To learn and explore Spring Framework, Android, AngularJS, GIT.
- Able to get jobs in software industry

Course Outcome

Key points: State clearly what knowledge and skill a student is expected to learn at the end of the course and will be able to apply.

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Able to gain knowledge on design and implementation of various software applications	PO1 (3), PO12(3)
CO2	Develop skills to analyze, design, and prepare SRS	PO2(3)
CO3	Ability to solve the real world problems	PO2(3)
CO4	To design and develop web applications using Spring, AngularJS and android applications	PO3 (2), PO5(2)
CO5	Able to do research for publishing articles.	PO4 (1)

Course content

1. CUST2011:Advanced JAVA Programming (0-3-1) hrs)

(75

- 1.1 Understanding Web Architecture
- 1.2 Installation and configure java environment.
- 1.3 Understanding MVC Architecture
- 1.4 Create GIT repository for version control and teamwork
- 1.5 Create a web project and define a landing page.
- 1.6 Create controller using servlet in web project
- 1.7 Retrieve value from page in controller through the request parameter.
- 1.8 Establish Connection with database
- 1.9 Perform CRUD operation
- 1.10 Present data in JSP page using scriptlet, expression and action tag.
- 1.11 Declare method and variable in JSP page.
- 1.12 Transferring control from one resource to another using RequestDispatcher and ResponseRedirect
- 1.13 Set and get values in ServletContext and ServletConfig parameter.
- 1.14 Set and get values in application, session and request attribute.
- 1.15 Perform session tracking.
- 1.16 Upload file to the server.
- 1.17 Working with JSTL

2. CUST2010 : Web Services Using JAVA (0-4-1) hrs)

(60

- 2.1 Setting Spring environment
- 2.2 Understanding Maven and define POM

- 2.3 Create project using Spring and Understanding Spring Architecture
- 2.4 Setting bean in IOC container and understand Dependency Injection
- 2.5 Working with Spring AOP
- 2.6 Access data using JdbcTemplate; CRUD operation
- 2.7 Create Spring Boot projects using Spring Initializr
- 2.8 Implement DevTools for rapid application development
- 2.9 Implement application logs using application.properties
- 2.10 Implement Global Exception handling mechanism
- 2.11 Implement Security using Spring Boot
- 2.12 Configure Email in application.properties
- 2.13 Implement Testing using Spring Boot Test
- 2.14 Implement application monitoring using Actuator
- 2.15 Create Spring MVC project and define controller
- 2.16 Implement form handling using SpringMVC
- 2.17 Implement RESTful Web Service using GET Method
- 2.18 Implement RESTful Web Service using POST, PUT, DELETE and validations
- 2.19 Implement End to End testing using Spring Boot Testing - @AutoConfigureMockMvc
- 2.20 Handle cyclic dependency during JSON creation in Web Service
- 2.21 Understanding ORM and Hibernate
- 2.22 Hibernate Configuration using XML and annotation
- 2.23 Implement DML using Spring Data JPA on a single database table
- 2.24 Implement Query Methods feature of Spring Data JPA
- 2.24 Implement O/R Mapping using Spring Data JPA
- 2.25 Implement Hibernate Query Language (HQL) and Native Query
- 2.26 Explain the need and benefit of Criteria Query

3. CUST2012:Web Programming Using AngularJS (0-2-1) (45 hrs)

- 3.1 Create AngularJS app and configure the environment
- 3.2 Understanding AngularJS Architecture
- 3.3 Get different value in page with AngularJS Expressions
- 3.4 Filtering data using AngularJS Filters, Creating Custom Filters
- 3.5 Working with Directives and Creating a custom directive
- 3.6 Working with Tables, \$index, \$even & \$odd
- 3.7 Working with ng-disabled directive, ng-show directive, ng-hide directive
- 3.8 Define controller in angularJS application
- 3.9 Understanding scope and globalScope used in controller and view
- 3.10 AngularJS Modules: Introduction to Angular JS Modules, Bootstrapping Angular JS
- 3.11 Create factory, service & provider in application
- 3.12 Working with Angular Forms, Model Binding, Forms Events, Updating Models with a Twist, Form Controller, Validating Angular Forms, \$error object
- 3.13 Consume web service using \$http service in application
- 3.14 Understanding SPA

- 3.15 Implement route service in application
3.16 Implement AngularJS Animation

4. CUST2013 :Product Development (0-0-8) (45 hrs)

Text Books:

1. Craig Walls, *Spring in Action, Fifth Edition*
2. Keogh Jim, *J2EE: The Complete Reference*
3. Ken Williamson, *Learning AngularJS: A Guide to AngularJS Development*

Reference Books:

1. Kogent Learning, *Java Server Programming Java Ee7 (J2EE 1.7), Black Book*
2. Alef Arendsen, *Professional Java Development with the Spring Framework*
3. Adam Freeman, *Pro AngularJS*

Course outline Prepared by; Rakesh Kumar Ray

Date: 04/07/2020

http://courseware.cutm.ac.in/courses/software_technology/

Note: 1 credit theory=10 hrs lecture, 1 credit practice/project=12.5 hrs lab/workshop/field work in a semester

		DOMAIN		
CUTM	CTCU2030	Cloud Technology	18	4--8--6
	CUCT2030	AWS Solution Architect (SAA-CO2)	6	2+4+0
	CUCT2031	AWS Developer (DVA-CO1)	6	2+4+0
	CUCT2032	Project	6	0+0+6

Course Outline

Code	Course Title	T-P-Pj (Credit)	Prerequisite
CUCT2030	AWS Solution Architect	2-4-0(6)	NIL

Course Objective

- To learn architectural principles and services of AWS
- Able to develop scalable and secure Cloud applications
- Get skills to use resources in Cloud
- Able to get jobs in various industries

Course Outcome

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Able to gain knowledge on architectural principles and services of AWS	PO1 (3)
CO2	Develop skills to analyze, design, and prepare resources in Cloud	PO2(3)
CO3	Ability to solve the real world problems	PO2(3)
CO4	Able to develop scalable and secure Cloud applications	PO3 (2), PO5(2)

Course Content

AWS Solution Architect (SAA-CO2)

Module I : Overview of AWS

(10 Hrs)

On Premise Data Center , What is Cloud Computing, Cloud Computing Offerings - Public, Private and Hybrid Cloud, AWS as the Public Cloud IaaS Leader, AWS Global Infrastructure - Regions and Availability Zones, Elastic Compute Cloud (EC2) Foundation, Create your first EC2 instance, VPC Components - Implied Router and Route Tables, Configuring VPC, IP Addressing - Internet Gateway - Subnet Types, VPC - Network ACLs and Security Groups, Configuring Security groups and NACL, VPC Security Scenarios - Applying Security Group and NACLs, VPC - Network Address Translation – NAT

Practice:

- Launching an EC2 instance
- Configuring Security groups and NACL
- IP Addressing
- Subnetting

Module II: Virtual Private Cloud (VPC)

(14 Hrs)

VPC Peering, Transit Gateway, VPC Virtual Private Networks (VPN), VPC Direct, Implementing AWS Direct Connect, Connect Knowledge - Direct Connect Routing and Link Aggregation Groups (LAGs), Hybrid Connectivity, AWS Direct Connect Gateway, AWS Direct Connect Limits, AWS VPC, Creating a VPC, VPC Endpoints - Gateway Endpoint, AWS VPC - VPC Gateway Endpoint, Configuring VPC gateway, Troubleshooting VPC Endpoints and gateways, AWS VPC - VPC Interface Endpoint, Egress Only Internet Gateway (for IPv6), VPC Flow log and DHCP Option Sets

Practice:

- Configuring VPC
- Troubleshooting EC2 and VPC
- Creating a VPC

- Implementing AWS Direct Connect
- Configuring VPC gateway
- Troubleshooting VPC Endpoints and gateways

Module III: Elastic Block Store, Elastic Network Interfaces (14 Hrs)

Elastic Block Store Types, EC2 Enhanced Networking and Placement Groups, EC2 Placement Groups, EC2 Status Checks and Monitoring, EC2 Instance States, EC2 Instance Termination and Termination Protection, EC2 Instance Metadata and User, EC2 Instance Launch Modes VPC and EC2, Instance Tenancy Attribute, Elastic Compute Cloud - Elastic Network Interfaces (ENIs, Elastic Network Interface (ENI) - IP Addressing, NAT instance Source/Destination Check, Public IPv4 address auto assignment, Configuring Elastic Block Store, Monitoring and checking health of EC2 instances, Elastic Network Interface, Troubleshooting ENI, Configuring and troubleshooting with EBS

Practice:

- Configuring Elastic Block Store
- Monitoring and checking health of EC2 instances
- Configuring and troubleshooting with EBS

Module IV: Elastic Load Balancer (10 Hrs)

Introduction, How ELB works, ELB health checks, ELB Cross Zone Load Balancing, ELB Positioning - Internet-facing vs Internal ELB, Refresher for TCP/IP Packet flow, ELB - Security Group and ELB - Network ACLs, ELB - Layer 4 TCP/SSL Listeners, ELB - Layer 7 HTTP/HTTPS Listeners, Attaching Elastic load balancer to instances, ELB Health check and ELB Security groups, NACL configuration, troubleshooting ELB - Application and Network

Practice:

- Attaching Elastic load balancer to instances
- ELB Health check
- ELB Security groups
- NACL configuration
- Troubleshooting ELB - Application and Network

Module V: Auto Scaling, Simple Notification Service (10 Hrs)

Auto Scaling Components, Auto Scaling Features, Auto Scaling Availability Zone Rebalance feature, Adding/Detaching EC2 instances to/from Auto Scaling Groups, Auto Scaling and Elastic Load Balancing Service, Auto Scaling Health Checks, Simple Notification Service, SNS Notifications & Merging Auto Scaling groups, Implementing Auto Scaling, Troubleshooting Autoscaling with new EC2 instances

Practice:

- Implementing Auto Scaling
- Adding/Detaching EC2 instances to/from Auto Scaling Groups
- Auto Scaling health checks
- Simple Notification Service
- Troubleshooting Autoscaling with new EC2 instances

Module VI: AWS Elastic File System (EFS) (16 Hrs)

Introduction to the Service and Mount Targets, AWS EFS - Use Cases, Use in On Premise Servers, Storage Classes, Pricing, AWS EFS - Data Encryption, EFS Data backup, EFS and AWS Datasync, Monitoring EFS, AWS FSx for Windows File Server - Introduction, Deployment options & Encryption, Amazon FSx - Data Protection, Backup/Restore, Access, Monitoring and Security, Amazon FSx for Lustre, Amazon EFS vs FSx for Windows vs FSx for Lustre, Creating Elastic File System, Monitoring EFS, Implementing Data Encryption, Setting up AWS FSx Windows File Server

Practice:

- Creating Elastic File System
- Monitoring EFS
- Implementing Data Encryption
- Setting up AWS FSx Windows File Server

Module VII: Elastic Map Reduce (10 Hrs)

Amazon Elastic Map Reduce Introduction, AWS EMR - Clusters, Nodes, and deployment in an AZ, Amazon ElastiCache Introduction, Amazon ElastiCache - Caching Strategies, Amazon ElastiCache for Memcached, Amazon ElastiCache for Redis, Amazon CloudFormation, Implementing AWS EMR, Deployment in Availability Zone, Amazon ElastiCache, Amazon ElastiCache for Redis, Amazon CloudFormation

Practice:

- Implementing AWS EMR
- Deployment in Availability Zone
- Amazon ElastiCache
- Amazon ElastiCache for Redis
- Amazon CloudFormation

Online Resource: <http://aws.amazon.com/training/awsacademy>
<http://aws.amazon.com/awsseduate>

Course Content

AWS Developer

Module I: IAM and EC2 (14 Hrs)

IAM Introduction, IAM Hands-On, EC2, Connect to SSH using Linux / Mac and Windows and Troubleshooting, Security Groups, Private vs Public vs Elastic IP, Configuring Webserver - Apache and Tomcat, Elastic Network Interfaces

ELB and ASG: High Availability and Scalability, Elastic Load Balancing (ELB), Classic Load Balancer (CLB), Application Load Balancer (ALB), Network Load Balancer (NLB), Elastic Load Balancer - Cross Zone Load Balancing, Elastic Load Balancer - SSL Certificates, Elastic Load Balancer - Connection Draining, Auto Scaling Groups - Scaling Policies

EBS and EFS: EBS Volume Types Deep Dive, EBS vs Instance Store

RDS, Aurora and ElastiCache: AWS RDS Overview, RDS Read Replicas vs Multi AZ, RDS Encryption and Security, Aurora, ElastiCache and its Strategies

Practice:

- Launching EC2 instance and Connect to SSH using Linux / Mac and Windows
- Configuring Webserver - Apache and Tomcat
- Implementing Elastic Load Balancing
- Configuring EBS volume
- Create database using AWS Aurora

Module II: Route53

(10 Hrs)

Route 53: EC2 Setup, Route 53 - TTL, CNAME vs Alias, Routing Policy - Simple, Weighted, Latency Route 53 Health Checks, Routing Policy - Failover, Geolocation, Multi Value

VPC: VPC, Subnets, IGW and NAT, NACL, SG, VPC Flow Logs, VPC Peering, Endpoints, VPN, DX, VPC Cheat Sheet & Closing Comments, Three Tier Architecture.

AWS CLI, SDK, IAM Roles & Policies: AWS CLI Setup, Configuration on Windows and Linux, CLI Installation Troubleshooting, Using CLI - EC2, S3, IAM Roles and Policies, AWS Policy Simulator, AWS CLI Dry Run, AWS CLI STS Decode, AWS EC2 Instance Metadata, AWS CLI Profiles, AWS CLI with MFA, AWS SDK, Exponential Backoff & Service Limit Increase, AWS Credentials Provider & Chain, AWS Signature v4 Signing

Practice:

- Route 53
- Create Amazon VPC
- AWS CLI Setup and Configuration on Windows and Linux
- CLI Installation Troubleshooting
- AWS CLI with MFA and AWS SDK

Module III: AWS S3

(10 Hrs)

Amazon S3: Amazon S3 - S3 Buckets and Objects, S3 Versioning and Encryption, S3 Security & Bucket Policies, S3 Consistency Model

S3 and Athena: S3 MFA Delete, S3 Default Encryption, S3 Access Logs, S3 Replication (Cross Region and Same Region), S3 Pre-signed URLs, S3 Storage Tiers + Glacier, S3 Lifecycle Policies, S3 Performance, S3 & Glacier Select, S3 Event Notifications, Athena, S3 Lock Policies & Glacier Vault Lock

CloudFront: CloudFront - CloudFront Caching & Caching, CloudFront Security, CloudFront Signed URL / Cookies

Practice:

- Creation of S3 bucket and uploading of objects to it
- S3 Versioning and Encryption
- S3 Replication and S3 glacier
- Application of CloudFront with S3

Module IV: AWS ECR

(14 Hrs)

ECS, ECR, Fargate - Docker in AWS: ECS, What is Docker, ECS Clusters, ECS Task Definition, ECS Service, ECS Service with Load Balancers, ECR, Fargate, ECS IAM Deep Dive & Hands On, ECS Task Placement and Constraints, ECS Auto Scaling

Elastic Beanstalk: AWS Elastic Beanstalk, Beanstalk First Environment, Second Environment, Beanstalk Deployment Modes, Beanstalk CLI and Deployment Process, Beanstalk Lifecycle Policy

Beanstalk Extensions, Beanstalk & CloudFormation, Beanstalk Cloning, Beanstalk Migrations, Beanstalk with Docker, Beanstalk Advanced Concepts, Code Commit, Code Pipeline, Code Build in VPC, Code Deploy for EC2 and ASG, AWS Code Star

CloudFormation: AWS CloudFormation - Create Stack, Update and Delete Stack, YAML, Resources, Parameters, Mappings, Outputs, Conditions, Intrinsic Functions, RollBacks, ChangeSets, Nested Stacks & StackSet

Practice:

- ECS Service with Load Balancers
- ECS Auto Scaling
- Elastic Beanstalk CLI and Deployment Process
- Applying Code Commit and Code Pipeline
- Implementing AWS CloudFormation

Module V: Monitoring and Audit

(10 Hrs)

Monitoring and Audit: AWS Monitoring, AWS CloudWatch Metrics, Alarms and Logs, CloudWatch Agent, Logs Metric Filters, CloudWatch Events, EventBridge Overview, X-Ray, X-Ray: Instrumentation and Concepts, Sampling Rules, APIs, Beanstalk, AWS CloudTrail, CloudTrail vs CloudWatch vs X-Ray

Integration and Messaging - SQS, SNS and Kinesis: AWS Integration & Messaging, AWS SQS, Dead Letter Queue, SQS CLI, FIFO Queues, SQS Advanced, AWS SNS, AWS Kinesis, KCL, Kinesis Security, Firehose and Analytics, SQS vs SNS vs Kinesis, Data Ordering for Kinesis vs SQS FIFO

Practice:

- Monitoring and checking health of the resource
- Application of AWS X-Ray
- Messaging using SNS and SQS
- Streaming of Data using AWS Kinesis

Module VI: Serverless Using Lambda

(18 Hrs)

Serverless Using Lambda: AWS Lambda, Lambda Synchronous Invocations, Lambda & Application Load Balancer, AWS Lambda@Edge, Lambda Asynchronous Invocations & DLQ, Lambda & CloudWatch Events / Event Bridge, Lambda - S3 Event Notifications, Lambda Event Source Mapping, Lambda Destinations, Lambda Permissions - IAM Roles & Resource Policies, Lambda Monitoring & X-Ray Tracing, Lambda in VPC, Lambda Function Performance, Lambda Concurrency, Lambda External Dependencies, Lambda and CloudFormation, Lambda Layers, Versions and Aliases, CodeDeploy, Limits

Serverless using DynamoDB: DynamoDB - Throughput, Basic APIs, Indexes (GSI + LSI), Optimistic Concurrency, DAX, Streams, TTL, CLI, DynamoDB Transactions, Session State, Partitioning Strategies, Conditional Writes, Concurrent Writes & Atomic Writes, Patterns with S3, Operations and Security

Serverless using API Gateway: API Gateway - API Gateway Stages and Deployment, Canary Deployments, Integration Types & Mappings, Swagger & Open API, Caching, Usage Plans & API Keys, Monitoring, Logging and Tracing, Authentication and Authorization, REST API vs HTTP API vs WebSocket API

Serverless Application Model: SAM, Installing the SAM CLI, Creating first SAM Project, Deploying SAM Project, API Gateway, DynamoDB, CloudFormation Designer and Application Repository, Policy Templates, CodeDeploy

Practice:

- Creating AWS lambda functions
- Lambda Permissions - IAM Roles & Resource Policies
- Creating and Maintaining database using DynamoDB
- API Gateway configuration
- Deploying Serverless Application

Module VII: AWS cognito

(08 Hrs)

Cognito: Cognito, User Pools, Identity Pools, Cognito User Pools vs Cognito Identity Pools, Sync

Security and Encryption: AWS Security, Encryption 101, KMS, KMS using CLI, KMS Encryption Patterns and Envelope Encryption, Limits, S3 Security Advanced, SSM Parameter Store Overview, Secrets Manager, SSM Parameter Store vs Secrets Manager, CloudWatch Logs Encryption, CodeBuild Security

Practice:

- Implementation of AWS Cognito
- AWS Key Management Service
- Key Management Service Encryption Patterns

Online Resource: <http://aws.amazon.com/training/awsacademy>
<http://aws.amazon.com/awsseducate>

Course Outline

Project

- Locally Debug a Serverless App
- Build a Serverless Web Application
- Design a database for a mobile app with Amazon DynamoDB
- Create a Load Balanced WordPress website
- Building serverless applications
- Add Voice to Your WordPress Site
- Deploy a Python Web App
- Migrate a Git Repository to AWS
- Build a Drupal Website
- Build a Modern Application
- Build, Train, and Deploy a Machine Learning Model
- Handle Errors in Serverless Applications
- Create and Manage a Nonrelational Database
- Launch and Configure a LAMP Website
- Deploy and Host a ReactJS App

- Set Up a Compliant Archive
- Host a Static Website
- Launch a Linux Virtual Machine
- Launch a WordPress Website
- Remotely Run Commands on an EC2 Instance
- Launch a Windows Virtual Machine
- Create and Query a NoSQL Table
- Introduction to Deep Learning
- Train a Deep Learning model
- Create a machine learning model automatically with Amazon SageMaker Autopilot
- Setting up a Document Database With Amazon DocumentDB (with MongoDB compatibility) and AWS Cloud9
- Detect, Analyze, and Compare Faces
- Create an AWS DeepLens Project
- Provision Desktops in the Cloud
- Publish Amazon SNS Messages Privately
- Deploy WordPress with Amazon RDS
- Create and Manage a Nonrelational Database
- Create an Audio Transcript

Gate Process for Project

Gate 0: Planning

Gate 1: Analysis

Gate 2: Design

Gate 3: Implementation

Gate 4: Testing

Gate 5: Deployment

Course Outline Prepared by: Prof. K.V. Kalyan/ Prof. Raj Kumar Mohanta

Courseware link: <http://courseware.cutm.ac.in/courses/domain-cloud-domain/>

		DOMAIN		
CUTM		Cyber Security	20	6+10+4
	CUCS2045	Linux Server Management and Security	4	2-2-0
	CUCS2046	Advanced Hacking Techniques	4	2-2-0
	CUCS2047	IT Networking and Network Security	4	2-2-0
	CUCS2048	Vulnerability Assessment & Penetration Testing	4	0-0-4
	CUCS2049	Project	4	0-0-4

Course Objective

- Develop skills to manage a Linux server and provide basic security to the server
- Master hacking methodology to be used in penetration testing
- Good understanding on network infrastructure and identify points of vulnerability in networks
- Hands on experience on various tools & techniques of vulnerability assessment & penetration testing used in Linux and shall pursue a career in penetration testing domain
- Able to get job in the field of cyber security

Course Outcome

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Able to gain knowledge on the various ways through which hackers' attempts to compromise an Application, Service, Desktop or a server and its countermeasures	PO1 (3)
CO2	Analyse and perform different type of attack and find the vulnerabilities	PO2(3)
CO3	Identify some of the problems driving the need for network security	PO2(3)
CO4	Able to design client and server side configuration of different services, build networks and subnets, configure network devices for switching and routing etc.	PO3 (3), PO5(1)

Course content

1. CUCS2045 - Linux Server Management and Security (50 HRs)

- 1.1 Access the command line, Recovery of the root user password
- 1.2 Managing files from the command line
- 1.3 Creating, Viewing, and Editing Text Files
- 1.4 Managing Local Linux Users and Groups
- 1.5 Linux File System Permissions
- 1.6 Monitoring and Managing Linux Processes
- 1.7 Archiving and Copying Files Between Systems
- 1.8 Installing and Updating Software Packages
- 1.9 Accessing Linux File Systems
- 1.10 Linux Networking
- 1.11 Analyzing and Storing Logs
- 1.12 Configuring and Securing OpenSSH Service
- 1.13 Using Regular Expressions with grep
- 1.14 Scheduling Future Linux Tasks
- 1.15 ACLs
- 1.16 SELinux Security

- 1.17 Adding Disks, Partitions, and File Systems to a Linux System
- 1.18 Managing Logical Volume Management (LVM) Storage
- 1.19 Boot Process
- 1.20 Managing different services using systemctl
- 1.21 Planning and Configuring Security Updates
- 1.22 Basics of System Auditing
- 1.23 Security guidelines during installation
- 1.24 Configuring firewall
- 1.25 Compliance Policy and Vulnerability Scanning With OPENS CAP

2. CUCS2046 -Advanced Hacking Techniques (56 HRs)

- 2.1 What is zero day vulnerability and how it works.
- 2.2 Replay attack, pass the hash
- 2.3 Hijacking, Clickjacking, Session hijacking, URL hijacking
- 2.4 Typo squatting, Manipulating Driver, Shimming
- 2.5 Refactoring, Pivot, Initial exploitation, Persistence
- 2.6 Techniques of Penetration Testing, vulnerability scanning
- 2.7 Passively test Security Controls
- 2.8 Identifying vulnerability, lack of security control, common misconfigurations
- 2.9 Intrusive vs non intrusive, Credentialed vs non- credentialed, False positive
- 2.10 Security using Firewall, ACL, Application based vs network based
- 2.11 Stateful vs Stateless, Implicit deny
- 2.12 Remote access vs site-to-site
- 2.13 IPSec, Tunnel mode, Transport mode, AH, ESP
- 2.14 Split tunnel vs full tunnel, TLS, Always-on VPN
- 2.15 HIDS/HIPS, Antivirus
- 2.16 File integrity check, Host based firewall
- 2.17 Application whitelisting, Removable media control
- 2.18 Advanced malware tools, Patch management tools
- 2.19 Data execution prevention, web application firewall
- 2.20 Network Segmentation, Blackholes, Sinkholes, and Honeypots
- 2.21 System Hardening
- 2.22 Google Dork
- 2.23 Proxy
- 2.24, Password Guessing
- 2.25 Browser Password Hacking
- 2.26 Application Password Hacking
- 2.27 OS Password Hacking
- 2.28 Server Password Hacking

3. CUCS2047 - IT Networking and Network Security (54 Hrs)

- 3.1 Network Fundamentals
- 3.2 OSI model

- 3.3 TCP/IP protocol suite
- 3.4 IP addressing- IPv4
- 3.5 IP addressing- IPv6
- 3.6 Subnetting
- 3.7 Wireshark
- 3.8 Packet capturing
- 3.9 Analysis of packet
- 3.10 DHCP
- 3.11 DNS
- 3.12 IP configuration
- 3.13 WAN connectivity
- 3.14 Authentication
- 3.15 Basic switching
- 3.16 Static routing
- 3.17 Dynamic routing
- 3.18 VLAN
- 3.19 IPSec
- 3.20 ACL
- 3.21 Firewall
- 3.22 SSL
- 3.23 VPN
- 3.24 NAT
- 3.25, AAA

4. CUCS2048 - Vulnerability Assessment & Penetration Testing (44 HRs)

- 4.1 To gain knowledge about how VAPT works, as well as network security protocols, devices, and controls.
- 4.2 Initiate and manage incidents, as well as do penetration testing.
- 4.3 Comprehend packet sniffing techniques.
- 4.4 Learn about network penetration testing models and procedures, security analysis
- 4.5 scanning and its types(network, port and vulnerability scanning)
- 4.6 Nmap and live scanning on ports and networks
- 4.7 Netcat usage on TCP/UDP ports
- 4.8 Wireshark basics and capturing data
- 4.9 NFS ,SMB ,SMTP enumeration
- 4.10 Vulnerability scanning overview
- 4.11 Different types of vulnerability scanning
- 4.12 Nessus installation and configuration
- 4.13 Vulnerability scanning with Nessus
- 4.14 Web application assessment with nikto, burp suite and Vega
- 4.15 Vulnerability analysis with Metasploit framework

- 4.16 Application security testing using acunetix
- 4.17 OWASP mobile vulnerability
- 4.18 Tools for Mobile application vulnerability
- 4.19 Identify and mitigate security issues using Microsoft TMT
- 4.20 Automated software testing using VAF tool
- 4.21 password security auditing and password recovery using John the Ripper
- 4.22 Penetration testing using BeEF tool

Text Books:

1. Soyinka Wale, Linux Administration A Beginners Guide ,Mcgrawhill HED, Sixth Edition
2. Jon Erickson , Hacking: The Art of Exploitation, No Starch Press, US, Second Edition
3. CCNA - Routing And Switching Study Guide by Todd Lammle

Reference Books:

1. **Patrick Engebretson,, The Basics of Hacking and Penetration Testing: Ethical Hacking and Penetration, Syngress Media,U.S, Second Edition**
2. **Designing Storage Area Networks – Second Edition – Tom Clark**
3. **<http://ptac.ed.gov/sites/default/files/issue-brief-threats-to-your-data.pdf>**

Sample Project

1. Password Security
2. System Auditing
2. Website vulnerabilities and counter measures
3. Secure application development

Course outline Prepared by: Suvendu Kumar Nayak

		DOMAIN		
CUTM	ARCU2060	Gaming and Immersive Learning (AR & VR)	20	5+5+14
	CUAR2060	Introduction to Gaming & Simulation	2	1+1+0
	CUAR2061	Game Assets & Game Objects	3	1+1+1
	CUAR2062	Building Game Environment	3	1+1+1
	CUAR2063	Game Animation, Scripting & UI	3	1+1+1
	CUAR2064	Binary Deployment and Cross-Platform Controls	3	1+1+1
	CUAR2065	Project	10	0+0+10

Objective:

- Students will know about the History of Computer Graphics
- Know about Gaming Industry and get a job in AR/VR field
- Understanding of Individual Roles in a Gaming Industry

- End to End Game Development skill

Course Outcome:

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Able to gain knowledge on game Assets Development, efficient Import/ Export of assets for Games.	PO1 (3)
CO4	Able to design Animation in Games, User Interface, Cross-Platform Support of a Game, Technical and Specification Document of a Game etc	PO3 (3), PO5(3)

Course content

Introduction to Gaming & Simulation

Module I: Welcome to Game Engine (2+2.5)

Importance of Storyboarding a Game Idea, The Economics of Game Development, Assessing Game Markets and Platforms, Marketing Methods for Games, Monetizing Games and Upgrades.

Module II: Introduction to Game Production (1)

Video Game Platforms and Genres, Describing the Game Production Pipeline, Game Development Jobs and Roles, The Game Design Document, The Technical Design Document, Getting Started in Unity, Creating a New Unity Project, Using the Unity Asset Store, Source Control for Working in Team.

Module III: The Game Engine User Interface (2+2)

Introduction to the Unity Editor Interface, Analyzing the Unity Editor User Interface, Utilizing the Unity Editor User Interface, Navigating the Scene View Window, Utilizing the Game View Window, Navigating the Hierarchy Window, Using the Inspector Window, Managing Assets in the Project Window, Searching and Filtering in the Project Window, Organizing the Scene with Layers.

Module IV: Using Game objects and assets (1+2)

Creating and Modifying Game Objects, Defining Unity Editor Units, Describing Assets in the Production Pipeline, Review: Defining an Asset, Organizing Assets in the Unity Editor, Defining a Game Object.

Module V: Defining a Game Object (2+2)

Creating Unity-native Game Objects, Manipulating Game Objects in the Unity Editor, Describing What is a Unity-native Game Object, The Role of Components in the Unity Editor, Defining Prefabs and Scene Structure, Defining the Role of the Prefab in Unity, Creating and Saving a Scene.

Module VI: The Hierarchy of Scenes within a Game (1+2)

Importing Assets into a Project, Importing and Configuring a 3D Model, Importing Textures for Use in Materials, Importing FBX Files with Animation, Working with Sprites, Introduction to Sprites in Game Development.

Module VII: Managing Projects and Assets (1+2)

Project Management in Unity, Introduction to Game Project Management, Managing Assets, Using the Unity Asset Store (Reprise), Importing Offline Content, Creating Project Structure Based on Assets, Sorting the Zombie Toys Prop Model Assets, Setting Resolution and Type of Texture Files.

2. Game Assets and Objects

Module I: Preparing Assets for implementation (1+2.5)

Best Practices in 3D Content Creation, Modelling for Games, Animating for Games, UV Mapping and Texturing Techniques, and Exporting to Unity, Importing into Unity, Materials in Unity, The Interaction of Lighting and Materials.

Module II: Discovering the Standard Shader in Unity (1+2)

Exploring other Material Types, Analyzing the Benefits of Custom Shaders, Creating the Materials for Zombie Toys Props, Duplicating and Modifying Materials, Case Studies in Material Creation, Managing and Using Textures in the Unity Editor, Texturing for Game Development, Optimization and Reuse of Textures.

Module III: Assembling the Game Level (2+2)

Branching and Hierarchies, Creating Hierarchies in Unity, Using Empty Game Objects as Pivots, Introduction to Physics in Unity, Understanding the Physics System in Unity, Introduction to the Rigid body Component.

Module IV: Introduction to Colliders (1+2)

Creating the Colliders for Zombie Toys Props, Introduction to Game Level Design, Introduction to Game Level Design, The Level Design in Zombie Toys, Placing Objects in a Scene, Importing the Prop Prefabs into the Scene, Cloning the Stars, Creating the Level Boundaries.

Module V: Lighting in Games (1+2)

Introduction to Game Lighting, Introduction to Game Lighting, Differences in Lighting for Games and for Film, Placing and Adjusting Lights in a Scene, Analyzing the Different Lights and Properties, Light Types and Behaviors, Using Layers to Exclude Objects from Lighting, Casting and Modifying Shadows, Mesh Renderer Attributes for Shadows.

Module VI: Differentiating Shadow Types (1+2)

Creating Cookies to Shape Lights, Faking Shadows for Better Performance, Benefits of Faking Shadows in Games, Utilizing Painted Shadows, Using Projectors to Project Shadow Cookies, Lighting the Zombie Toys Game, Lighting the Zombie Toys Scene, Lighting Variations for Changing the Mood.

Module VII: Baking Lighting in Game Production

(1+2)

Light Baking in Video Games, Introduction to Light Baking in Video Games, Setting Objects to Participate in Light Baking, Marking Objects as Static for Light Baking, Creating UV Coordinates for Light Baking, Baking Lighting, Continuous and Manual Light Baking, Placing Light Probes for Moving Objects, Creating Reflection Probes, Baking the Lighting in Zombie Toys, Creating the Light Probes in Zombie Toys.

3. Building Game Environment

Module I: Building the Player and Allies

(2+2)

Creating a Player Controller, Examining Why to Use a Custom Controller, Creating the Player Controller Game Object, Adding a Game Manager, Explaining the Purpose of the Game Manager, Making the Controller Functional, Adding Scripts for Behavior, Configuring the Camera, Creating the Sheep Ally, Building the Sheep Ally From a Model, Creating the Dog Ally, Building the Dog Ally From a Model.

Module II: Building the Enemies

(2+2)

Creating an Enemy, Designing the Enemy Behaviors, Creating the First Enemy Character, Creating the Enemy Animator Controller, Creating Additional Enemies, Creating the Zombear Enemy, Creating the Zombie Duck Enemy, Creating the Other Enemies, Integrating Enemies into the Game, Placing the Spawn Points, Spawning the Enemies.

Module III: Introduction to Unity's Particle System

(1+1)

Analyzing Existing Particle Effects, Setting Up the Interface for Effects, Case Study: Developing the Lightning Attack, Overview of the Lightning Attack, Building the Lightning Attack Hit, Building the Lightning, Attack Emitter, Building the Lightning Bolt, Integrating the Lightning Attack into the Game.

Module IV: Creating Particle Systems

(1+2)

Intro to the Particle Systems in the Unity Editor, Examples of Unity Particles in Video Games, the Role of the Effects Artist in Video Games, Comparing Game Effects with Other Media, And Production Best Practices for Particle Systems.

Module V: Case Study

(1+2)

Developing the Frost Attack, Introduction to the Frost Attack, Building the Frost Debuff, Building the Frost Attack Emitter, Building the Frost Cone Effect, Integrating the Frost Attack into the Game, Case Study: Developing the Stink Bomb Attack, Introduction to the Stink Bomb Attack, Creating the Stink Bomb Hit Effect.

Module VI: Case Study

(1+2)

Developing the Slime Attack, Introduction to the Slime Attack, Creating the Slime Hit Effect, Creating the Slime Debuff, Creating the Slime Attack Reticle, Building the Slime Attack

Emitter, Building the Slime Projectile, Integrating the Slime Attack into the Game, Finalizing Player Attacks, Adding the Ally Manager.

Module VII: Adding Audio to Game Levels (1+2.5)

Introduction to Audio in Game Development, Introduction to Audio in Game Development, Importing Audio into Unity, Introduction to Importing Audio in Unity, Supported Audio Formats in Unity, Playing Audio in the Unity Editor, , Testing Audio Sources in the Scene, Mixing Audio in Unity, Using Audio Mixers and Audio Mixer Groups, Setting up the Zombie Toys Audio Mixers, Creating Audio Effects, Introduction to Audio Effects.

4. Game Animation, Scripting & UI

Module I: Animating Game Objects in the Unity Editor (1+2)

Introduction to Animation in Game Development, Introduction to Animation in Game Development, Animating in the Unity Editor, Creating Animation in the Unity Editor, Refining Animation in the Unity Editor.

Module II: Bringing Animation into the Game (1+2)

Importing Animated Characters, Introduction to Rigging and Imported Animation, Recognizing Asset Data when Importing, Differentiating Available Rig Animation Types.

Module III: Animation Creation and Controlling (1+2)

Creating and Naming AnimationClips, Creating an Animator Controller, Introduction to the Animator Controller, Creating and Modifying Animation States, Creating Parameters to Control Transitions, Creating an Animator Override Controller.

Module IV: Scripting in Game Development (2+2.5)

Intro to Scripting in Game Development, Intro to Scripting in Game Development, Creating Scripts in Unity, Creating and Saving a Script in Unity, Analysing the Default, Script Methods, Scripting Primer and Best Practices, Attaching a Script to a Game Object. Declaring Variables, List of Variable Types, Creating Conditions in Scripting, Introduction to Conditions, The “if” Condition, The “if else” Condition, Complex Conditions, Looping.

Module V: Designing User Interfaces for Games (1+2)

Introduction to Designing the User Interface, Assessing User Interface Design Needs, Examining the UI Tools in the Unity Editor, Creating a User Interface, Investigating the Canvas Functionality, Utilizing the Power of the Rect Transform, Creating a UI Button, Creating a UI Image, Creating UI Text, Creating Interaction in the UI with Events.

Module VI: Introduction to Looping (1+2)

The “while” Loop, The “for” Loop, Creating Custom Methods, The Benefits of Using Custom Methods, Utilizing Arguments, Utilizing Method Return Types, Coroutines, Introduction to

Coroutines, Accessing Components via Script, Utilizing the GetComponent() Function, Common Code Cases, Common Pieces of Zombie Toys Code..

Module VII: Implementing Navigation and Path Finding (1+2)

Introduction to Navigation and Path Finding, Introduction to Navigation in Unity, Describing a NavMesh, Defining a NavMesh Agent, Describing a NavMesh Obstacle.

5. Binary Deployment and Cross-Platform Controls

Module I: Building the Camera and Player Selection System (1+3)

Intro to the Camera and Player Selection Behaviors, Analyzing the Player Selection System.

Module II: Creating another Player Option (2+2.5)

Making the Player Selectable, Adding Another Player, Finalizing the Camera.

Module III: Adding Camera Animations (2+2)

Configuring the Camera Animator Controller, Applying Behavior to the Camera, Adding Character Selection Spotlights.

Module IV: Building and Deploying the Game (1+1)

Building the Game, Introduction to the Build Process, Adjusting the Player Settings, Building the Game.

Module V: Protecting Your Creation (1)

Legal Considerations for Your Game, Unity Services, Unlocking the Unity Platform Potential, Surveying Unity Services

Module VI: Understanding of Cross-Platform Inputs (1+2)

Different Input types like, Mobile, WebGL, OpenVR & other unity supported platforms.

Module VII: Preparing for Mobile Deployment (2+2)

Modifying Zombie Toys for Mobile, Introduction to Mobile Development in Unity. Changing the Build Platform to Mobile, Adding the Mobile Interface UI, Implementing Mobile Input Behaviors.

Course outline Prepared by: Abhi Mitra

Date: July 6, 2020

Source of reference: UCA Courseware.

Note: 1 credit theory=10 hrs lecture, 1 credit practice/project=12.5 hrs lab/workshop/field work in a semester

DOMAIN TITLE: Computational Fluid Dynamics (CFCU2180)

Sl. No.	Course Code	Course Title	Course Type	T-P-Pr	Credits
1	CUCF2180	Introduction to CFD	Theory +Project	2+0+1	3
2	CUCF2181	Grid Generation	Practice	0+2+0	2
3	CUCF2182	Flow Solver Techniques-Simulia	Practice +Project	0+3+1	4
4	CUCF2183	Simulation and Validation	Practice	0+5+0	5
5	CUCF2184	Industry Specific Project and/or Internship		0+0+6	6
Total					20

Domain Track Objectives:

1. To familiarise the students with different industrial fluid flow systems
2. To educate fundamental skills utilized in various flow systems through the usage of CFD software platforms.
3. To be familiar with the numerical elements and their implementation in many emerging Computational methods such as automobiles, aerospace, manufacturing, etc

Domain Track Course Outcomes:

1. Able to write computer programs for solving elementary fluid dynamics/ heat transfer problems.
2. Execute industry projects to produce Quality products for Clients.
3. General competency in Numerical solution of problems in fluid dynamics

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Students able to write computer programs for solving elementary fluid dynamics/ heat transfer problems.	PO1(3)
CO4	Execute industry projects to produce Quality products for Clients	PO3(3)

CO2	General competency in Numerical solution of problems in fluid dynamics	PO4(3),PO6 (2)

Introduction to CFD

Course Title	Course Code	Type of Course	T-P-Pr	Pre-Requisite
Introduction to CFD	CUCF2180	Theory +Project	2+0+1	Nil

Course Objective

- To understand the basic fundamentals of fluid dynamics and heat transfer systems.
- To learn the numerical aspects used in CFD methodology

Course Outcome

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Able to gain knowledge on various fluid dynamics and heat transfer in the various technological systems	PO1(3)
CO3	Able to identify different types of flows and heat transfer generated in various for designs systems.	PO2(3)

Course content

1. Introduction to CFD (2-0-1)

Module-1

Fluid, Properties of Fluid (Temperature, Vapour Pressure, Viscosity, Specific Gravity, Compressibility, Speed of Sound, Density, Energy, Specific Heat, Newtonian and Non-Newtonian Fluids

Module-2

Lagrangian and Eulerian Approaches, Classification of Fluid Flow (Inviscid vs. Viscous, Laminar vs. Turbulent, Incompressible vs. Compressible, Internal vs. External, Steady vs. Unsteady, Rotational vs. Irrotational, 1D, 2D and 3D Flows)

Project 1. Case studies in industrial pipe flows.

Module-3

Governing Equations of Flow Field (Conservation of Mass, Momentum (Navier-Stoke Equation) and Energy)- Differential Form, Integral Form.

Project 2. Case studies and generation of drag and lift for flow over bodies.

Module-4

Flow Features (Stagnation, Boundary Layer (Laminar to Transition to Turbulent), Flow Separation), Types of Boundary Conditions.

Project 3. Case studies in different types of aerofoil and its applications.

Module-5

Heat Transfer in Fluid (Conduction, Convection (Natural, Forced), Radiation), Non-dimensional Quantities, Flow Similarity between Prototype and Model.

Project 4. Case studies for various non-dimensional quantities and its importance in CFD.

Module-6

CFD and its applications, Discretization methods for the CFD (FDM, FVM, FEM, Hybrid Methods).

Project 5. Case studies for the various applications of CFD and its significance.

Module-7

Turbulence Modelling, CFD Solution Tool Chain

Project 6. Case studies for the different turbulence modelling in CFD.

Text Book:

1. An Introduction to Computational Fluid Dynamics, by H.K.Versteeg & W.Malalasekera, Longman Scientific & Technical, England

Grid Generation

Course Title	Course Code	Type of course	T-P-Pr	Pre-Requisite
Grid Generation	CUCF2181	Practice	0+2+0	Nil

Objective

- To understand the CFD Meshing techniques used for various CFD systems.
- To get knowledge and generate hands-on skills with different grid system used in various industrial systems.

Course outcomes

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Able to gain Knowledge on various CFD Meshing techniques	PO1 (2)
CO3	Able to identify problems in CFD Meshing with the used of tools	PO2(3),
CO4	Able to use the meshing tools in design and Development of systems	PO2(2), PO3(3)

2.1 Introduction to Meshes- CFD Meshing Basics

2.2 Different Element Shapes- Creating, Managing & Updating Meshes

2.3 CFD Meshing- 2D Mesh, 3D Mesh, Mapped Face Meshing,

Practice 1. 2D mapped Mesh for rectangular pipe

Practice2. 2D mapped Meshing for Aerofoil.

2.4 Structured Meshing, Un-Structured Mesh, Sweep 3D Mesh

Practice 3. 3D structure mesh of Circular Cylinder

Practice 4. 3D unstructured mesh with prims layers for Aerofoil

Practice 5. 3D coarse/ medium/ fine sweep mesh for pipe

Practice 6. 3D coarse/ medium/ fine unstructured Octree Tetrahedron mesh for Aerofoil.

Practice 7. 3D hex- dominant mesh for rectangular Duct.

2.5 Visualization the Mesh- Visualization Management, Mesh Visualization Options, Section, Clipping Box, Mesh colour, Element shrink

2.6 Reviewing the Mesh- Quality Analysis, free Edges, Interfaces, Duplicate Checker, Isolate Node Checker

Practice 8. 3D hex-dominant with surface mesh, Boundary prim mesh for DS car.

Practice 9. 3D Tetrahedron filler mesh Narrowing pipe.

Practice 10. 3D Tetrahedron, surface, for Electronics Module.

Practice 11. 3D Sweep mesh for circular cylinder.

Practice 12. 3D mesh generation for Subsonic Converging-diverging Nozzel.

Practice 13. 3D Sweep mesh generation for U-Bend pipe.

Practice 14. 3D mesh generation of Dimple Ball.

Practice 15. 3D mesh generation of a wedge body.

Text Book:

1. HandBook of Grid Generation, by J.F.Thompson, B.K.Soni & N.P.Weatherill, CRC Press , New York.

Flow Solver Techniques-Simulia

Course Title	Course Code	Type of Course	T-P-Pr	Pre-requisite
Flow Solver Techniques-Simulia	CUCF2182	Practice +Project	0+3+1	Nil

Objective

- To Get the hands of skills on the Dassult System SIMULIA tool for CFD Problems
- To know the workflow of the CFD process, generating post-processing results for various industrial systems

Course outcomes

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Able to gain knowledge on various CFD workflow techniques used in engineering systems	PO1(3)
CO4	Able to apply various hands-on skills and use tool	PO5(3)
CO3	Able to make problem-solving ability and post-processing results	PO3(3),PO4 (2),

Course content

3.1 Overview-Fluid Dynamics Engineer Essentials

- Connecting to the platform, Assigning roles and Apps, Platform Interface, Importing 3D XML file, Simulation Conventions in the 3DEXperience Platform

Practice 1. Getting Started with the 3DEXperience Platform.

3.2 Import an assembly

- Explore the imported assembly, Renamed the assembly, Search for parts/assemblies in the database, open parts/ assemblies found through search, duplicate, delete and save entities, Import a 3D XML file containing fluid materials, Create and save a new material.

3.3 Fluid Dynamics Engineer Role Overview

- Exploring Fluid Dynamics Engineer Role Apps, CFD simulations work flow, Model preparations, Material definitions, Meshing, CFD analysis, Analysis convergence, co-simulation Analysis, Post processing results, CFD solver validations.

Practice 2. CFD analysis of steady state internal Laminar Pipe flow.

Project 1. Analysis of pipe flow at $Re = 500$.

3.4 Getting Started with CFD Simulations

- Fluid Model Creation, Fluid Scenario Creation App Interface, Model setup, applying meshing, Scenario Setup, Results visualizations, Reviewing Simulation Features,

Practice 3. CFD analysis Steady-state external flow over an Airfoil.

Project 2. Analysis of 2D cylinder in a rectangular domain with varying radius and height.

3.5 Geometry for CFD Simulations

- Geometry Preparation- Check and Repair, Defeature Idealize, Create, Healing, Join, Local Join, surface connection Checker, Face checker, Mid surface

Practice 4. Modeling of Air intake system.

Practice 5. Extracting Fluid volume for Engine Manifold.

3.6 Material and Section Properties of Fluid

- Understanding materials, working with materials, Creating a new Material, Applying a Material, Adding New Domains, Editing a Material Domain, Simulation Domain, Material Behaviors in a Simulation Domain, Section Properties, working with Imported Meshes

3.7 Defining Physics of Fluid

- Analysis Procedures- Enabling Temperature, Compressible, Coupled vs Segregated solver, Gravity effects.
- Turbulence Modelling- SST k-w, Realizable k-e, Spalart-Almaras, Radiation Modeling, Steady-state Analysis, Transient Analysis- Courant-Freidrichs-Levy (CFL) condition, Grid Independence Study, Bad cell Treatment

Practice 6. Grid Independence study for above cases (pipe / airfoil) using different solver schemes.

Project 3. Analysis of flow an over a circular cylinder at $Re=10^7$.

Practice 7. Conjugate Heat Transfer (CHT) Analysis of an Electronics Module.

Project 4. Analysis of temperature rise through cross flow heat exchanger.

3.8 Boundary and Initial Conditions

- Boundary Conditions, wall boundary conditions, Thermal wall boundary, Initial Conditions, Initializing Compressible flows, Turbulence Specifications at Boundaries, Surface-to – surface Radiation specification at Boundaries, Time- dependent Boundary Conditions, Spatially- Varying Boundary conditions, User defined Boundary conditions.

3.9 Turbulence Modeling & Modeling Techniques.

Practice 8. Aerodynamics analysis of DS car.

Practice 9. Unsteady Flow across a Circular Cylinder.

Practice 10. Transonic Flow over an Airfoil.

Project 5. Analysis and estimation of Drag lift coefficients flat plate at $Re=10,000$.

3.10 Solution Convergence

Practice 11. Cavitating Flow through a Narrowing Pipe.

Project 6. Analysis of compressible flow nozzle with atmospheric pressure at the nozzle exit.

3.11 Post-processing Results.

Practice 12. Creating Post processing reports for all the above cases.

Simulation and Validation

Course Title	Course Code	Type of Course	T-P-Pr	Pre-Requisite
Simulation and Validation	CUCF2183	Practice	0+5+0	Nil

Objective

- To apply and develop skills with various real-time industrial flow problems
- To learn the CFD simulation and validation process used for various systems

Course outcomes

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO4	Able to apply hands on and CFD technical skills used in various technological systems	PO5 (3), PO6 (2)
CO2	Able to simulate problem-solving using tool	PO2(3)
CO5	Able to carry out validation processes for various CFD systems	PO4 (3)

Practice

- 4.1 Fluid flow in the rear duct of an automotive HVAC system.
- 4.2 CFD Analysis of an Air intake system.
- 4.3 CFD Steady-state External flow over a Drone in cruise.
- 4.4 DE featuring of a Lens Component.
- 4.5 CFD analysis for Conjugate Heat Transfer in a fan –cooled CPU Board.
- 4.6 CFD analysis Energy computations in a Contact Analysis.
- 4.7 Thermo-mechanical Analysis of a Laser Powder Bed Fusion Build.
- 4.8 CFD analysis in Turbulent pipe flow.
- 4.9 CFD Supersonic flow analysis for 3D cone.
- 4.10 CFD analysis over a Ahmed body.

Basket V(Elective)

Software Testing and Test Automation

Course Title	Code	Type of Course	T-P-PJ	Prerequisite
Testing and Test Automation		Theory+ Practice	2-2-0	Nil

Course Objective:

• Develop methods and procedures for software development that can scale up for large systems and that can be used to consistently produce high-quality software at low cost and with a small cycle time • Students will learn how to use available resources to develop software, reduce cost of software and how to maintain quality of software methods and tools of testing and maintenance of software's • Students will get employability on software testing

Course Outcome

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Able to gain knowledge on modern software testing processes in relation to software development and project management	PO1 (3), PO12(3)
CO2	Contribute to efficient delivery of software solutions and implement improvements of various problems in the software development processes. It stimulate analytical skill and critical thinking among students	PO2(3)
CO3	Ability to solve the real world problems	PO2(3)
CO4	To create and design test strategies and plans, design test cases, prioritize and execute them	PO3 (2), PO5(2)

Course outline

Module I: Introduction to Software Engineering (8 Hours)

Evolving of software engineering, Software requirements, Requirement engineering process: feasibility studies, requirements elicitation and analysis, requirements validation, requirements management. Process models: waterfall model, incremental process models, evolutionary process models, the unified process. System models: context models, behavioral models, data models, object models, structured methods.

Module II: System Design (8 Hours)

Software architecture, Data design, Architectural styles and patterns, Architectural design, SDLC, Conceptual model of UML, Basic structural modeling, Class diagrams, Sequence diagrams, Collaboration diagrams, Use case diagrams, Component diagrams, Design scenario and case studies. Test case examples.

Module III: Testing (8 Hours)

A strategic approach to software testing, Software testing life-cycle (STLC), Test scenario, Test execution, Bug tracking. Quality management: Statistical software quality assurance, Software reliability. Basics of manual testing: Concepts, Types, Tools, Automation testing Vs Manual testing, Unit testing, Integration testing, System testing, Black-box and white-box testing, Validation testing, Sanity Vs Smoke Testing, Regression Testing and Functional and non-functional Testing.

Module IV: Selenium - Web Testing (10 Hours)

Web Application Testing, Cross-browser Testing, Test Case Management: Sample Test Case Template, Requirements Traceability Matrix (RTM) - Test Coverage, Test Data Management, Automation Testing using Selenium: Introduction to Selenium, Basics of Selenium Automation Testing, Selenium Web Driver and its contrast operation with RC, Web Driver Basics : First Selenium Web Driver Script: JAVA Code Example, Locators in Selenium IDE: CSS Selector, DOM, XPath, Link Text, ID, Find Element and Find Elements in Selenium Web Driver, Selenium Form Web Element: TextBox, Submit Button, sendkeys(), click()

Module V: Selenium - Web Driver Essentials (8 Hours)

How to Select Check Box and Radio Button in Selenium Web Driver, How to Click on Image in Selenium Webdriver, How to Select Value from Drop Down using Selenium Webdriver, Locate Elements by Link Text & Partial Link Text in Selenium Webdriver, Mouse Click & Keyboard Event: Action Class in Selenium Webdriver

Module VI: Selenium - File Handling Essentials (8 Hours)

How to Upload & Download a File using Selenium Webdriver, XPath in Selenium WebDriver: Alert & Popup Window Handling in Selenium WebDriver, How to Handle Web Table in Selenium WebDriver, Handling Dynamic Web Tables Using Selenium WebDriver, Desired Capabilities in Selenium WebDriver, How to Verify Tooltip using Selenium WebDriver, How to Find All/Broken links using Selenium Webdriver, Gecko (Marionette) Driver Selenium: Download, Install, Use with Firefox

Module VII: selenium - Testing (10 Hours)

TestNG: Annotations, Framework, Examples in Selenium, TestNG Groups: Include, Exclude with Example, TestNG @Test Priority in Selenium, Parallel Execution in Selenium: Session Handling & TestNG Dependency, TestNG: How to Run Multiple Test Suites in Selenium, TestNG Listeners in Selenium: ITestListener & ITestResult Example, How to Execute Failed Test Cases in TestNG: Selenium WebDriver, TestNG Report Generation in Selenium WebDriver, Customize, PDF & Email TestNG Reports in Selenium WebDriver

POWER SYSTEM OPERATION & CONTROL

Code	Course Title	(Credit)	T-P-PJ
CUTM2582	POWER SYSTEM OPERATION & CONTROL	3	2-1-0

Course Objective

- ☐ To learn the basic control technique involved in power system operation
- ☐ To provide a solid foundation in mathematical and engineering fundamentals required to control the governing system in turbine models

Course Outcome

COs	Course outcomes	Mapping COs with POs (High-3, Medium-2, Low-1)
CO1	Able to gain knowledge on Economic operation of power system and importance of LFC power plans.	PO1 (3), PO2 (2)
CO3	Able to identify and resolve the problems on Load frequency control of power system.	PO2(3),
CO4	Use of software/design tools for operation of power system and control.	PO3(3)

Module – I [7 Hours]

Fundamentals of Power System:

Introduction, Single Subscript Notation, Double Subscript Notation, Power in Single Phase AC Circuit, Complex Power, The Power Triangle, Direction of Power Flow, Voltage and Current in Balanced Three Phase Circuits, Power in Balanced Three Phase Circuits, PerUnit Quantities, Changing the Base in Per- Unit Quantities, Node Equations, The Single Line or One Line Diagram, Impedance and Reactance Diagrams. The Admittance Models & Network Calculations Branch and Node Admittances, Mutually Coupled Branches in Ybus, an Equivalent Admittance Network, Modification of Ybus, the Network Incidence Matrix and Ybus.

Module – II [7 Hours]

Power Flow Solutions

The Power-Flow Problem, the Gauss-Seidal Method, the Newton-Raphson Method, the Newton-Raphson Method, Power-Flow Studies in System Design and Operation, Regulating

Transformers, the Decoupled Method. Power system structure: Power factor correction, three phase loads, delta to star transformation: advanced topics as decided by the concerned faculty teaching the subject.

Module – III [7 Hours]

Economic Operation of Power System

Distribution of Load between Units within a Plant, Distribution of Load between Plants, The Transmission-Loss Equation, An interpretation of Transformation C, Classical Economic Dispatch with Losses, Automatic Generation Control, Unit Commitment, Solving the Unit Commitment Problems.

Module – IV [7 Hours]

Load Frequency Control, Control Area Concept

Automatic Load-Frequency Control of Single Area Systems: Speed-Governing System, Hydraulic Valve Actuator, Turbine-Generator Response, Static Performance of Speed Governor, Closing the ALFC Loop, Concept of Control Area, Static Response of Primary ALFC Loop, Dynamic Response of ALFC Loop, Physical Interpretation of Results, The Secondary (“Reset”) ALFC Loop, Economic Dispatch Control, Load frequency control.

Module – V [6 Hours]

Two Area Systems

ALFC of Multi-Control-Area Systems (Pool Operation): The Two Area Systems, Modelling the Tie-Line, Block Diagram Representation of Two Area System, Mechanical Analog of Two Area System, Dynamic Response of Two Area System, Static System Response, Tie-Line Bias Control of Multi-Area Systems. Tie line bias control

Module- VI [6 Hours]

Power System Stability

The Stability Problem, Rotor Dynamics and the Swing Equation, Further Considerations of the Swing Equations, The Power-Angle Equation, Synchronizing Power Coefficients, Equal Area Criterion for Stability, Further Applications of the Equal-Area Criterion, Multi-machine Stability Studies: Classical Representation, Step-By-Step Solution of the Swing Curve, Computer Programs for Transient Stability Studies, Factors Affecting Transient Stability. Synchronous machine, Steady state stability, Transient Stability:

HARDWARE BASED

1. To determine negative and zero sequence synchronous reactance of an alternator.
2. To determine sub-transient direct axis and sub-transient quadrature axis synchronous reactance of a 3-ph salient pole alternator.
3. To determine fault current for L-G, L-L, L-L-G and L-L-L faults at the terminals of an alternator at very low excitation.
4. To study the IDMT over-current relay and with different plug setting and time setting multipliers and plot its time – current characteristics.
5. To determine the operating characteristics of biased different relay with different % of biasing.
6. To determine location of fault in a cable using cable fault locator.

SIMULATION BASED (USING MATLAB OR ANY OTHER SOFTWARE)

1. To obtain steady-state, transient and sub-transient short-circuit currents in an alternator.
2. To formulate the Y-Bus matrix and perform load flow analysis.
3. To compute voltage, current, power factor, regulation and efficiency at the receiving end of a three phase Transmission line when the voltage and power at the sending end are given. Use Π model.
4. To perform symmetrical fault analysis in a power system.
5. To perform unsymmetrical fault analysis in a power system.
6. Write a program in language to solve economic dispatch problem of a power system with only thermal units. Take production cost function as quadratic and neglect transmission loss.
